Tinsley Harrison -- doctor, teacher, researcher, medical school leader -- is one of the most important medical figures of the 20th century. He edited the first five editions of Harrison's Principles of Internal Medicine, regarded as a quintessential medical text and perhaps the best-selling medical textbook of all time. He traveled the world in his capacity as a teaching doctor, made significant contributions to scholarship, and served as the dean/medical chairman at four medical schools. He is a titan of the field, an enormous presence central to the narrative

of American medicine. Author Dr. James Pittman knew Harrison well, studying and teaching with him from the 1950s until Harrison's death. Pittman spent six years interviewing Harrison near the end of Harrison's life, and these lengthy interviews, as well as interviews with his colleagues, family and friends, form the bulk of the scholarship of this compulsively readable book. Pittman brings his own medical knowledge to the fore, as well as his personal friendship with the subject, in this beautifully written character study of one of science's great but not well-known men. Harrison lived a long, exciting life, and in these pages, readers will get a glimpse of the historical forces that shaped and in turn were shaped by this legendary doctor.

The leading introductory radiology text for medical students and others who are required to read and interpret common radiologic images, *Learning Radiology, 4th Edition*, stresses an easy-to-follow pattern recognition approach that teaches how to differentiate normal and abnormal images. Dr. William Herring's clear, conversational writing style employs a touch of humor to explain what you need to know to effectively interpret medical images of all modalities. From the basics of patient safety, dose reduction, and radiation protection to the latest information on ultrasound, MRI, and CT, this concise, user-friendly text provides a complete, up-to-date introduction to radiology needed by today's

students. Teaches how to arrive at a diagnosis by following a pattern recognition approach, and logically overcome difficult diagnostic challenges with the aid of decision trees. Features an easy-to-read bulleted format, high-quality illustrations, useful tables, and teaching boxes, as well as special content on Diagnostic Pitfalls; Really Important Points; Weblinks; and Take-Home Points. Includes three new chapters: Vascular, Pediatric, and Point-of-Care Ultrasound; Using Image-Guided Interventions in Diagnosis and Treatment (Interventional Radiology); Recognizing the Imaging Findings of Breast Disease. Shares the extensive knowledge and experience of esteemed author Dr. William Herring—a skilled radiology teacher and the host of his own specialty website, [www.learningradiology.com](http://www.learningradiology.com). Offers quick review and instruction for medical students, residents, and fellows, as well as those in related fields such as nurse practitioners and physician assistants. "Harrison's is intended for learners throughout their careers. For students, Part 1, Chapter 1 begins with an overview of "The Practice of Medicine". In this introductory chapter, the editors continue the tradition of orienting clinicians to the science and the art of medicine, emphasizing the values of our profession while incorporating new advances in technology, science, and clinical care. Part 2, "Cardinal Manifestations and Presentation of

Diseases" is a signature feature of Harrison's. These chapters eloquently describe how patients present with common clinical conditions, such as headache, fever, cough, palpitations, or anemia, and provide an overview of typical symptoms, physical findings, and differential diagnosis. Mastery of these topics prepares students for subsequent chapters on specific diseases they will encounter in courses on pathophysiology and in clinical clerkships"--

At the time of writing, the topic of lead pollution is the subject of an intense and sometimes heated debate. The argument centres upon possible adverse health effects arising from exposure of children to current environmental levels of lead. Such arguments now appear little closer to resolution than they did five years ago, although the development of ever more sophisticated biochemical and epidemiological techniques may eventually provide an answer. Over the past five to ten years, as the general public has become aware of the lead issue, pressure has been put upon governments to limit emissions of lead, and hence limit or reduce the exposure of the population to the metal. Govern ments and governmental agencies have responded in several ways, varying between those who prefer to take little or no action on the basis that they see no cause for concern, and those who have taken firm

action after concluding that the scientific and medical evidence warrants this approach. Any effective control strategy for lead requires knowledge of the sources of environmental exposure and an understanding of the pathways of this metal in the environment. This book aims to provide such information and to explain the methods available for limiting emissions of lead from the most important sources. To put this information in context a chapter on the routes of human exposure to lead and the health effects is included.

Harrison's Principles of Internal Medicine, 15/e: Self-Assessment and Board Review is a very successful Q&A review book, developed for self-assessment and examination preparation.
