This book looks at the industrial policies of Southeast Asian economies in their motor vehicle industries from early import substitution to policy-making under the more liberalised WTO policy regime. The book examines how inward automotive investment, especially from Japan, has been affected by policies, and how such investment has promoted industrial development in the late-industrialising economies within ASEAN (Association of Southeast Asian Nations). It provides insights into the automotive industry of Southeast Asia in terms of production volumes, sales volumes, market structure, and trade. Through country case studies, the book is a useful reference and illustrates how industrial policies in Southeast Asia have affected the spread of automotive development in the region. It will appeal to policy-makers and researchers interested in the automobile industry, industrial policies in the industry and the spread of development from foreign investors to local firms. Covers all models of Pick-Up, Tacoma, T100, Land Cruiser, 4Runner, 2 and 4 wheel drive.

The author's fifth chronology on international terrorism, covering the period from 1992 through 1995.

The steady growth in the number of vehicles on the road, heavy reliance on coal, use of dirty fuels for residential combustion, and extensive open burning are some of the major factors leading to the progressive deterioration of air quality in developing countries in Asia. And despite efforts to establish and implement air quality measurement systems, the development of infrastructure, environmental technology, and management practices continues to lag behind the rate of emission increase. Based on ten years of coordinated research, Integrated Air Quality Management: Asian Case Studies discusses technical and policy tools for the integrated air quality management of developing countries in Asia. The book begins with an overview of major issues of air quality management practices in developing Asia and potential approaches to reduce pollution, including opportunities for integration of air quality improvement and climate migration strategies. It covers the methodology and results of fine particulate matter monitoring using traditional filter-based and satellite monitoring techniques. It examines the applications of a 3D dispersion modeling tool for urban and regional air quality management focusing on surface ozone, fine particulate matter, and acid deposition. The final chapters discuss innovative control technologies for gaseous air pollutants and illustrate the integrated air quality management in developing Asia through case studies for target source categories including agricultural residue field burning, vehicle emissions, brick kilns, and industrial VOC emission. Illustrated with case studies, this book presents an integrated air quality management methodology that employs technical and policy tools to achieve air quality goals. It includes technical information and policy recommendations based on the outcomes of several multi-year air quality research programs coordinated by the Asian Institute of Technology. The text combines fundamental information and advanced knowledge useful to large audiences dealing with subjects of integrated air quality management.

The volume aims at providing a comprehensive review of the diverse efforts covering the gap existing between the two main perspectives on the topic of ontologies for multi-agent systems, namely: How ontologies should be modelled and represented in order to be effectively used in agent systems, and on the other hand, what kind of capabilities should be exhibited by an agent in order to make use of ontological knowledge and to perform efficient reasoning with it. The volume collects the most significant papers of the AAMAS 2002 and AAMAS 2003
