Unwritten Literature of Hawaii: The Sacred Songs of the Hula (1909) is a collection of hulas and essays by Nathaniel B. Emerson. Translating previously unwritten songs, interviewing native Hawaiians, and consulting the works of indigenous historians, Emerson provides an entertaining and authoritative look at one of Hawaii's most cherished traditions. "For an account of the first hula we may look to the story of Pele. On one occasion that goddess begged her sisters to dance and sing before her, but they all excused themselves, saying they did not know the art. At that moment in came little Hiiaka, the youngest and the favorite. [...] When banteringly invited to dance, to the surprise of all, Hiiaka modestly complied. The wave-beaten sand-beach was her floor, the open air her hall; Feet and hands and swaying form kept time to her improvisation." As an American born in Hawaii who played a major role in the annexation of the islands as an author of the 1887 Constitution of the Hawaiian Kingdom, Emerson likely saw himself as a unifying figure capable of interpreting for an English-speaking audience the ancient and sacred tradition of the hula, a Polynesian dance often accompanied with instruments and chanting or singing. Combining critical analysis with samples of popular hulas in both Hawaiian and English, Emerson works to preserve part of the rich cultural heritage of the Hawaiian Islands. With a beautifully designed cover and professionally typeset manuscript, this edition of Nathaniel B. Emerson's Unwritten Literature of Hawaii: The Sacred Songs of the Hula is a classic of Hawaiian literature reimagined for modern readers.

Vols. for 1964- have guides and journal lists.

Twelve Years a Slave (1853) is a memoir and slave narrative by Solomon Northup, as told to and edited by David Wilson. Northup, a black man who was born free in New York, details his kidnapping in Washington, D.C. and subsequent sale into slavery. After having been kept in bondage for 12 years in Louisiana by various masters, Northup was able to write to friends and family in New York, who were in turn able to secure his release. Northup's account provides extensive details on the slave markets in Washington, D.C. and New Orleans and describes at length cotton and sugar cultivation on major plantations in Louisiana.

This volume contains the proceedings of the 11th International Conference on Structural Analysis of Historical Constructions (SAHC) that was held in Cusco, Peru in 2018. It disseminates recent advances in the areas related to the structural analysis of historical and archaeological constructions. The challenges faced in this field show that accuracy and robustness of results rely heavily on an interdisciplinary approach, where different areas of expertise from managers, practitioners, and scientists work together. Bearing this in mind, SAHC 2018 stimulated discussion on the new knowledge developed in the different disciplines involved in analysis, conservation, retrofit, and management of existing constructions. This book is organized according to the following topics: assessment and intervention of archaeological heritage, history of construction and building technology, advances in inspection and NDT, innovations in field and laboratory testing applied to historical construction and heritage, new technologies and techniques, risk and vulnerability assessments of heritage for multiple types of hazards, repair, strengthening, and retrofit of historical structures, numerical modeling and structural analysis, structural health monitoring, durability and sustainability, management and conservation strategies for heritage structures, and interdisciplinary projects and case studies. This volume holds particular interest for all the community interested in the challenging task of preserving existing constructions, enable great opportunities, and also uncover new challenges in the field of structural analysis of historical and archeological constructions.

Over 55% of your day is spent listening; yet only 2% of us have been trained in how to listen. What is poor listening costing you? Do you rush from meeting to meeting, your head buried in the last conversation you had, without time to think of the next? Or feel frustrated with unproductive discussions where the loudest in the room adds limited insight and drowns out everyone else? We usually think of these situations as communication problems; that we have not spoken our needs correctly or clearly. Yet, conflict, chaos and confusion are the costs of not listening. Many communication and listening books say the most important person in a conversation is the speaker - not true! This pocket-sized guide will help you to reconnect with your innate gift of deep listening, to create the right space to listen to yourself before you listen to others. You'll learn to listen beyond the words that are spoken, to add context and meaning and listen in to what's not being said. Deep Listening will help you move from confusion and conflict to thoughtful, insightful and powerful discussions that will transform not just your work, but your whole life.

I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

Preface Adhesion is a phenomenon architects and civil engineers are not very familiar with. In other disciplines knowledge about surface properties and the background of bonding energies is also far from satisfactory; nevertheless there are many important applications in concrete engineering, where adhesion is necessary for success and durability. These include: - coating and painting - repair of concrete surfaces - bonding of fresh to old concrete - crack injection - glueing of precast elements - glueing of steel to concrete, etc. In 1981 RILEM established the technical committee 52-RAC 'Resin Adherence to Concrete'. The main aims of the committee's work were - to collect research results and practical experiences - to initiate and coordinate research programs - to develop, on a scientific base, test methods for field and for laboratory purposes. One of the results of the committee's work is a state-of-the-art report, which will be presented orally as a General Report at the International Symposium ISAP '86, and will be printed either in the RILEM journal Materials and Structures or separately. Several test recommendations have been elaborated and will be prepared as drafts for the participants of ISAP '86. These are: - direct tensile test - pull-off test - direct shear test - slant shear test - four-point bending test - dynamic loading test - thermal compatibility test (two versions) - injectibility test.

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important

libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

This book reports the state of the art of energy-efficient electrical motor driven system technologies, which can be used now and in the near future to achieve significant and cost-effective energy savings. It includes the recent developments in advanced electrical motor end-use devices (pumps, fans and compressors) by some of the largest manufacturers. Policies and programs to promote the large scale penetration of energy-efficient technologies and the market transformation are featured in the book, describing the experiences carried out in different parts of the world. This extensive coverage includes contributions from relevant institutions in the Europe, North America, Latin America, Africa, Asia, Australia and New Zealand.

Describes all aspects of the physics of transition metal compounds, providing a comprehensive overview of this diverse class of solids. Set within a modern conceptual framework, this is an invaluable, up-to-date resource for graduate students, researchers and industrial practitioners in solid-state physics and chemistry, materials science, and inorganic chemistry.

This volume had its origin at a conference held in 1978 at the East- West Center that considered the short- and long-term energy problems of the Asia-Pacific region. That group of national energy policymakers, scientists, and technologists agreed that providing adequate energy for the rural areas of the developing countries looms large as one of the more critical problems of the region. Encouraged by this consensus, the East-West Resource Systems Institute obtained a grant from the Agency for International Development for the purpose of initiating a collaborative, multi-country study of rural energy problems. The National Research Council of Thailand and the East-West Center agreed to work closely together as twin foci for the coordination of the effort.
