The 21st Century Truck Partnership (21CTP), a cooperative research and development partnership formed by four federal agencies with 15 industrial partners, was launched in the year 2000 with high hopes that it would dramatically advance the technologies used in trucks and buses, yielding a cleaner, safer, more efficient generation of vehicles. Review of the 21st Century Truck Partnership critically examines and comments on the overall adequacy and balance of the 21CTP. The book reviews how well the program has accomplished its goals, evaluates progress in the program, and makes recommendations to improve the likelihood of the Partnership meeting its goals. Key recommendations of the book include that the 21CTP should be continued, but the future program should be revised and better balanced. A clearer goal setting strategy should be developed, and the goals should be clearly stated in measurable engineering terms and reviewed periodically so as to be based on the available

Electric drive vehicles (EDVs) are seen on American roads in increasing numbers. Related to this market trend and critical for it to increase are improvements in battery technology. Battery Technology for Electric Vehicles examines in detail at the research support from the U.S. Department of Energy (DOE) for the development of nickel-metal-hydride (NiMH) and lithium-ion (Li-ion) batteries used in EDVs. With public support comes accountability of the social outcomes associated with public investments. The book overviews DOE investments in advanced battery technology, documents the adoption of these batteries in EDVs on the road, and calculates the economic benefits associated with these improved technologies. It provides a detailed global evaluation of the net social benefits associated with DOE's investments, the results of the benefit-to-cost ratio of over 3.6-to-1, and the life-cycle approach that allows adopted EDVs to remain on the road over their expected future life, thus generating economic and environmental health benefits into the future.

should serve as a handy reference volume to anyone interested in the issue of international management and the impact of globalization upon production models. Companies know how to meet the demands of shareholder value: years of managerial excellence testify to this achievement. Many also know how to create stakeholder value – through traditional approaches such as CSR and philanthropy which predictably lead to trade-offs and added costs. What remains elusive is discovering is how to meet both shareholder and stakeholder requirements in the core business – without mediocrity and without compromise – creating value for the company that cannot be disentangled from the value it creates for society and the environment. What if sustainability was embedded into the DNA of your organization? How can you incorporate environmental, health and social value into its very core? Many companies, despite their best intentions, "bolt on" sustainability as an afterthought to their core strategies. They trumpet green initiatives and social philanthropy which lie at the margins of the business, with symbolic wins that inadvertently highlight the unsustainability of the rest of their activities. Today's ecological and social pressures require a different business response – one that existing strategy frameworks fail adequately to address. In *Embedded Sustainability*, authors Chris Laszlo and Nadya Zhexembayeva explain and predict how companies can better leverage global challenges for enduring profit and sustained growth. They introduce the marquis concept of embedded sustainability: the incorporation of environmental, health, and social value into the heartbeat of the

product life-cycle with no trade-off in price or quality – no social or green premium. This book helps readers to comprehend and implement the notion of embedded sustainability. At its best, embedded sustainability is invisible, similar to quality. In addition to delivering socially and environmentally conscious products for consumers, it is capable of considerably motivating employees. Most of all, it enables smart companies to create even more value for both their shareholders and stakeholders.
