Franklin, Jack, Marla, Thadius, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job - no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundstage, confront undead lecherous lodgers and other assorted beasties, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other - or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.

This edition of Importing Into the United States contains material pursuant to the Trade Act of 2002 and the Customs Modernization Act, commonly referred to as the Mod Act. Importing Into the United States provides wide-ranging information about the importing process and import requirements. We have made every effort to include essential requirements, but it is not possible for a book this size to cover all import laws and regulations. Also, this publication does not supersede or modify any provision of those laws and regulations. Legislative and administrative changes are always under consideration and can occur at any time. Quota limitations on commodities are also subject to change. Therefore, reliance solely on the information in this book may not meet the "reasonable care" standard required of importers.

Information Control Problems in Manufacturing 2006 contains the Proceedings of the 12th IFAC Symposium on Information Control Problems in Manufacturing (INCOM'2006). This report examines the potential for freight modal shift from truck-to-rail in the upper Midwestern U.S. to improve air quality and reduce CO2 emissions. Two scenarios were generated, one focusing on intra-regional freight movements within the Midwest and the second on through-freight movements into, out of, and through the region. Freight truck and rail emissions inventories were generated corresponding to each scenario and input to a regional air quality model (CMAQ). Results showed the intra-regional scenario had little impact on Midwest air quality, however the through-freight scenario greatly reduced concentrations of NO2 and EC near roadways (up to 27% for NO2 and up to 16% for EC), with corresponding increases near railways. The through-freight scenario also reduced CO2 emissions 31% compared to baseline trucking. Reductions in PM2.5 and O3 were modest, up to 3%. We conclude that while truck-to-rail modal shift does improve regional air quality, the motivation for advocating rail over truck lies principally in reduced human exposure to near-roadway pollution, as well as reduction of carbon emissions.

Advances in Product Family and Product Platform Design: Methods & Applications highlights recent advances that have been made to support product family and product platform design along with successful applications in industry. This book provides not only motivation for product family and product platform design (i.e., address questions about "why and when should we platform") but also methods and tools to support the design and development of families of products based on shared platforms (i.e. address the "how" and "what" questions about platforming). It begins with a general overview of product family design to introduce the general reader to the topic and then progress to more advanced topics and design theory to help designers, engineers, and project managers plan, architect, and implement platform-based product development strategies for their company. Finally, successful industry applications provide readers and practitioners with case studies and "talking points" to become platform advocates and leaders within their organization.
