A comprehensive, up-to-date presentation of how children and young people are affected by and respond to situations of armed conflict and postwar reconstruction. * Includes biographical profiles of real young people caught up in war and postwar reconstruction * Offers an annotated bibliography of key works, plus chapter-by-chapter links to further reading

This new volume traces the normative, legal, institutional, and political responses to the challenges of assisting and protecting internally displaced persons (IDPs). The crisis of IDPs was first confronted in the 1980s, and the problems of those suffering from this type of forced migration has grown continually since then. Drawing on official and confidential documents as well as interviews with leading personalities, *Internal Displacement* provides an unparalleled analysis of this important issue and includes: an exploration of the phenomenon of internal displacement and of policy research about it a review of efforts to increase awareness about the plight of IDPs and the development of a legal framework to protect them a 'behind-the-scenes' look at the creation and evolution of the mandate of the Representative of the Secretary-General on IDPs a variety of case studies illustrating the difficulties in overcoming the operational shortcomings within the UN system a foreword by former UN high commissioner for refugees, Sadako Ogata. *Internal Displacement* will appeal to students and scholars with interests in war and peace, forced migration, human rights and global governance.

One of the most hotly debated subjects in current events is the use of force by police personnel. In recent years, protests

have taken place over most of the United States after several high-profile cases in which excessive force during arrests was claimed. This volume examines opinions surrounding police action in the United States and abroad, such as arguments in favor of or against controversial policies such as stop-and-frisk. Through this wide spectrum of experiences, students are encouraged to reach their own conclusions using the information they have read and synthesized.

This book explores the issue of development-induced resettlement, with a particular emphasis on the humanitarian, legal, and social aspects of this problem. Today, so-called 'development-induced displacement and resettlement' (DIDR) is one of the dominant causes of internal spatial mobility worldwide. Each year over 15 million people are forced to abandon their homes to make space for economic development infrastructure. The construction of dams and irrigation projects, the expansion of communication networks, urbanization and re-urbanization, the extraction and transportation of mineral resources, forced evictions in urban areas, and population redistribution schemes count among the many possible causes. Terminski aims to present the issue of development-caused displacement as a highly diverse, global social problem occurring in all regions of the world. As a human rights issue it poses a challenge to public international law and to institutions providing humanitarian assistance. A significant part of this book is devoted to the current dynamics of development-caused resettlement in Europe, which has been neglected in the academic literature so far.

This timely text examines the causes and consequences of population displacement related to climate change in the recent past, the present, and the near future. First and foremost, this book includes an examination of patterns of population displacement that have occurred or are currently underway. Second, the book introduces a three-tier framework for both understanding and responding to the public health impacts of climate-related population displacement. It illustrates the interrelations between impacts on the larger physical and social environment that precipitates and results from population displacement and the social and health impacts of climate-related migration. Third, the book contains first-hand accounts of climate-related population displacement and its consequences, in addition to reviews of demographic data and reviews of existing literature on the subject. Topics explored among the chapters include: Hurricane Katrina and New Orleans Hurricane Maria and Puerto Rico The California Wildfires Fleeing Drought: The Great Migration to Europe Fleeing Flooding: Asia and the Pacific Fleeing Coastal Erosion: Kivalina and Isle de Jean Charles Although the book is largely written from the perspective of a researcher, it reflects the perspectives of practitioners and policymakers on the need for developing policies, programs, and interventions to address the growing numbers of individuals, families, and communities that have been displaced as a result of short- and long-term environmental disasters. Global Climate Change, Population Displacement, and Public Health is a vital resource for an international audience of researchers,

practitioners, and policymakers representing a variety of disciplines, including public health, public policy, social work, urban development, climate and environmental science, engineering, and medicine.

At present and over the next few years, large-scale windfarms are being installed far off the coast of Germany in the North and Baltic Sea, making a major contribution to electricity generation from renewable energy sources. One of the German government's aims is to ensure the environmentally sound and sustainable development of offshore wind energy. Germany's first offshore test site, alpha ventus, was therefore accompanied from the construction phase to the first years of operation by an intensive environmental research programme, the StUKplus project, financed by the Federal Ministry for the Environment, Nature Conservation and Nuclear Safety and coordinated by the Federal Maritime and Hydrographic Agency. Marine and ecological aspects have been researched there for more than five years to improve the level of knowledge about the ecological impacts of offshore windfarms. This book provides a broad, richly illustrated overview of applied and new research methods and monitoring techniques. It summarises the key research findings on the impacts on benthic communities, fish, marine mammals and birds, also taking into account underwater sound and sediment measurements. Interpreting the results in the sense of lessons learned, new challenges and perspectives are discussed for future sustainable offshore development in German waters.

This book focuses on emerging issues related to internal

displacement in Africa. The six principal issues discussed are climate change, technology, xenophobia, harmful practices, generalized violence and development projects. Increasingly, the need to understand the root causes of the dimensions of internal displacement and the dimensions in which this displacement manifests have become a pertinent rhetoric in the discussion on internal displacement. Therefore, this monograph examines emerging issues for which there is very little in the internal displacement discussion, with the aim of providing knowledge within African regional contexts to advance law and policy formation. The novelty of this book lies in the fact that it moves beyond the conventional discussion on internal displacement into grey areas on the subject in Africa, leveraging the African Union Convention for the Protection and Assistance of Internally Displaced Persons (the Kampala Convention). This book will be a significant reference point for researchers, professors, practitioners, judges, policy makers, international organizations, regional bodies, lawyers and scholars in the fields of migration, forced migration, and regional institutions.

Nigeria is the most dynamic country on the African continent. Yet the legacy of colonialism, deep-rooted corruption, exposure to climate change and the proliferation of small arms have created a precarious security situation that holds back the country's potential for peace and prosperity. Security in Nigeria explores the many security threats facing Nigeria and assesses the government's responses to date. With contributors spanning three continents, it provides an original and

comprehensive analysis of 'old' and 'new' security threats and offers original solutions to address the crisis.

Policing America is an introductory textbook to policing in the United States. In a balanced approach, the text presents the theoretical foundations of American policing, with a focus on contemporary police practices and research. Oliver covers all of the key topics in policing, but does not overburden the student with either extraneous material only loosely related to policing or the overly detailed presentation of research more suited to a graduate program. In an engaging and readable style, the author offers an overview of past practices and research in policing, but emphasizes more contemporary policing practices and research. The focus of the book is on a contextual understanding of concepts in American policing. It is supported by the academic research, balanced with the voice of the American police officer.

Features: Balanced approach that emphasizes contemporary policing. Written by an academic with police experience, resulting in an approach that combines the theoretical and the practical aspects of police work. Uses hypotheticals to bring the concepts to life for students. Student-friendly and accessible presentation incorporates graphic elements such as boxed features and charts to emphasize and summarize key points. Encourages students to think critically about the role of policing in today's society. Oliver is an experienced author of textbooks in the criminal justice and policing fields, having authored or co-authored over a dozen books.

Environmental migration is not new. Nevertheless, the events and processes accompanying global climate change threaten to increase human movement both within states and across international borders. The Intergovernmental Panel on Climate Change has predicted an increased frequency and severity of climate events such as storms, cyclones and hurricanes, as well as longer-term sea level rise and desertification, which will impact upon people's ability to survive in certain parts of the world. This book brings together a variety of disciplinary perspectives on the phenomenon of climate-induced displacement. With chapters by leading scholars in their field, it collects in one place a rigorous, holistic analysis of the phenomenon, which can better inform academic understanding and policy development alike. Governments have not been prepared to take a leading role in developing responses to the issue, in large part due to the absence of strong theoretical frameworks from

which sound policy can be constructed. The specialist expertise of the authors in this book means that each chapter identifies key issues that need to be considered in shaping domestic, regional and international responses, including the complex causes of movement, the conceptualisation of migration responses to climate change, the terminology that should be used to describe those who move, and attitudes to migration that may affect decisions to stay or leave. The book will help to facilitate the creation of principled, research-based responses, and establish climate-induced displacement as an important aspect of both the climate change and global migration debates.

This book analyses the anthropological, historical, and legal contours of the crime of forcible displacement and proposes specific measures that the international community can adopt in order to prevent and/or punish the perpetration of the crime in the future.

This book examines Syrian displacement since the start of the 2011 conflict. It considers how neighboring refugee-hosting states – namely Jordan, Turkey and Lebanon – have responded to Syrian refugees, as well as how the international humanitarian community has assisted and protected refugees and internally displaced persons (IDPs). Miller examines Syrian displacement as it relates to EU and US policies, and relates Syrian displacement to broader themes and debates on the international refugee regime and humanitarian intervention. The

book argues that displacement is not a mere symptom or byproduct of the conflict in Syria, but a key variable that must be addressed with any peace plan or strategy for ending the conflict and rebuilding Syria. Responses to displacement should therefore not just be thought of in a humanitarian context, but also as a political, security and economic issue. Drawing on media reports, research briefs, scholarly books and articles, NGO reports and UN research to contextualize and critically analyze the blur of headlines and rhetoric on Syria, the book seeks to shed light on the political and humanitarian responses to displacement. It seeks to inform policymakers, practitioners and scholars about the current Syrian displacement situation, helping to make sense of the complex web of literature on Syrian refugees and IDPs.

In the past ten years or so, displacement by development projects has gone on almost untamed under the globalization pressures to meet the demand for land from local and increasingly foreign investors. Focusing on India, this book looks at the complex issue of resettling people who are displaced for the sake of development. The book discusses how the affected farming communities are fiercely opposing the development projects that often leave them worse off than before, and how this conflict is a matter of serious concern for the planners, as it could discourage potential capital inflows and put

India's growth trajectory into jeopardy. It analyses the challenge of protecting the interests of farmers, and at the same time ensuring that these issues do not hinder the path of development. The book goes on to highlight the emerging approaches to resettlement that promise a more equitable development outcome. A timely analysis of displacement and resettlement, this book has an appeal beyond South Asian Studies alone. It is of interest to policy makers, planners, administrators, and scholars in the field of resettlement and development studies.

This ABC introduces medicine in areas of conflict or natural disaster responding to the growing number of regions affected. Chapters deal with subjects such as earthquakes and landslides as well as nuclear incidents and biological warfare both nationally and internationally. It covers both logistical planning and medical aid as well as post-conflict recovery, offering psychological as well as medical and public health support. It prepares aid workers for a range of roles in all possible situations.

Even as the United States enjoys a booming economy and historically low levels of unemployment, millions of Americans remain out of work or underemployed, and joblessness continues to plague many urban communities, racial minorities, and people with little education. In *Jobs for the Poor*, Timothy Bartik calls for a dramatic shift in the way the United States confronts this problem. Today, most efforts to address this problem focus on ways to make workers more employable, such as job training and welfare reform. But Bartik argues that the United States should put more emphasis on ways to increase the interest of employers in creating jobs for the poor—or the labor demand side of the labor market. Bartik's bases his case for labor demand policies on a comprehensive review of the low-wage labor market. He examines the effectiveness of government interventions in the labor market, such as Welfare Reform, the Earned Income Tax Credit, and Welfare-to-Work programs, and asks if having a job makes a person more employable. Bartik finds that public service employment and targeted employer wage subsidies can increase employment among the poor. In turn, job experience significantly increases the poor's long-run earnings by enhancing their skills and reputation with employers. And labor demand policies can avoid causing inflation or displacing other workers by targeting high-unemployment labor markets and persons who would otherwise be unemployed. Bartik concludes by proposing a large-scale labor demand program. One component of the program would give a tax credit to employers in areas of high unemployment. To provide disadvantaged workers with more targeted help, Bartik also recommends offering short-term subsidies to employers—particularly small businesses and nonprofit organizations—that hire people who otherwise would be unlikely to find jobs. With experience from subsidized jobs,

the new workers should find it easier to obtain future year-round employment. Although these efforts would not catapult poor families into the middle class overnight, Bartik offers a powerful argument that having a full-time worker in every household would help improve the lives of millions. Jobs for the Poor makes a compelling case that full employment can be achieved if the country has the political will and adopts policies that address both sides of the labor market.

Some ten million people are displaced or resettled every year, due to development projects, often with negative results. The contributors argue that there is a complexity and tension, when trying to reconcile enforced displacement with the creation of a socio-economically viable and sustainable environment.
