How do the rich get rich? An updated edition of the “remarkable” New York Times bestseller, based on two decades of research (The Washington Post). Most of the truly wealthy in the United States don’t live in Beverly Hills or on Park Avenue. They live next door. America’s wealthy seldom get that way through an inheritance or an advanced degree. They bargain-shop for used cars, raise children who don’t realize how rich their families are, and reject a lifestyle of flashy exhibitionism and competitive spending. In fact, the glamorous people many of us think of as “rich” are actually a tiny minority of America’s truly wealthy citizens—and behave quite differently than the majority. At the time of its first publication, *The Millionaire Next Door* was a groundbreaking examination of America’s rich—exposing for the first time the seven common qualities that appear over and over among this

exclusive demographic. This edition includes a new foreword by Dr. Thomas J. Stanley—updating the original content in the context of the financial crash and the twenty-first century. “Their surprising results reveal fundamental qualities of this group that are diametrically opposed to today’s earn-and-consume culture.” —Library Journal

The Greater China Australia Dialogue on Public Administration has held annual workshops since 2011 on public administration themes of common interest to the People's Republic of China, Taiwan and Australia. This book presents and discusses a selection of papers developed from the Dialogue's fifth workshop held in late 2015 hosted by the National Taiwan University in Taipei. The theme, 'Value for Money', focused on budget and financial management reforms, including how different nations account for the

relative performance of their public sectors. All governments face the challenge of scarce resources requiring budgetary management processes for identifying the resources required by and available to government, and then for allocating them and ensuring their use or deployment represents value for money. Such budgetary and financial management processes need to inform decision-making routinely and protect the integrity of the way public resources are used – with some public accountability to indicate that their uses are properly authorised and reflect the policies of legitimate government leaders. The chapters in this book explore budgeting and financial management in three very different jurisdictions: Australia, the People’s Republic of China and the Republic of China (Taiwan). These activist and at times innovative countries are keen to analyse and reflect upon each other’s policy achievements and patterns of public provision. They are keen to learn more about each other as their economic and social engagement continues to deepen. They are also conscious that fundamental differences exist in terms of economic development and global strategic positioning, and levels and philosophies of political development; to an extent these differences are representative of differences amongst countries around the globe.

Research universities are critical contributors to our national research enterprise. They are the principal source of a world-class labor force and fundamental discoveries that enhance our lives and the lives of others around the world. These institutions help to create an educated citizenry capable of making informed and crucial choices as participants in a democratic society. However many are concerned that the unintended cumulative effect of federal regulations undercuts the productivity of the research enterprise and diminishes the return on the federal investment in research. Optimizing the Nation's Investment in Academic Research reviews the regulatory framework as it currently exists, considers specific

regulations that have placed undue and often unanticipated burdens on the research enterprise, and reassesses the process by which these regulations are created, reviewed, and retired. This review is critical to strengthen the partnership between the federal government and research institutions, to maximize the creation of new knowledge and products, to provide for the effective training and education of the next generation of scholars and workers, and to optimize the return on the federal investment in research for the benefit of the American people.
