Proteins, Cells and Materials contains a collection of articles, which constitute together the complete Festschrift in honor of the 65th birthday of Dr. John L. Brash. For the first time these articles - published previously in several special issues of the Journal of Biomaterials Science Polymer Edition - have been compiled into one comprehensive volume. Over the past 40 years John Brash, a member of the Editorial Board of the Journal of Biomaterials Science Polymer Edition, has distinguished himself in the field of biomaterials. Much of his efforts have focused on detailed studies of bloodâ€™surface interactions, particularly those of plasma proteins. His multi-faceted approach recognises the importance of hemodynamics, transport and surface phenomena in the gross effects that result from bloodâ€™surface contact. In this book articles on the most recent development in these areas are collected and will thus provide a wealth of information of current research to specialists in the above-mentioned fields.

The German church cantata of the eighteenth century was the culmination of a long tradition of Lutheran "sermon music" that used the proclamation, amplification, and interpretation of scripture to teach and persuade the listener. Bach's cantatas also served this didactic purpose and

typically incorporate numerous allusions to scriptural passages or themes in their librettos. Unfortunately, many of these passages remain obscure to the twentieth-century musician because they demand a much closer familiarity with the Bible than is common today. The Handbook to Bach's Sacred Cantata Texts identifies scriptural references for the wording, imagery, and themes that Bach's listeners would have known. In addition, the religious or literary theme of each text is summarized within the specific context of the cantata as a whole. With interlinear translations and a full complement of indexes.

The Oxford Guide to the Romance Languages is the most exhaustive treatment of the Romance languages available today. Leading international scholars adopt a variety of theoretical frameworks and approaches to offer a detailed structural examination of all the individual Romance varieties and Romance-speaking areas, including standard, non-standard, dialectal, and regional varieties of the Old and New Worlds. The book also offers a comprehensive comparative account of major topics, issues, and case studies across different areas of the grammar of the Romance languages. The volume is organized into 10 thematic parts: Parts 1 and 2 deal with the making of the Romance languages and their typology and classification, respectively; Part 3 is devoted to individual structural overviews of Romance languages, dialects, and

linguistic areas, while Part 4 provides comparative overviews of Romance phonology, morphology, syntax, semantics and pragmatics, and sociolinguistics. Chapters in Parts 5-9 examine issues in Romance phonology, morphology, syntax, syntax and semantics, and pragmatics and discourse, respectively, while the final part contains case studies of topics in the nominal group, verbal group, and the clause. The book will be an essential resource for both Romance specialists and everyone with an interest in Indo-European and comparative linguistics.

Hungarian immigrants' status as foreigners and their disadvantageous class position prevented them from gaining power in Canadian society, forcing them to rely almost exclusively on ideologies and institutions within their own communities to better their situation. Focusing on the social and cultural dimensions of immigrant politics, Carmela Patrias places the Hungarian situation within the larger context of immigration history.
