It is said that if the smell of the Himalayas creeps into a man's blood, he will return to the hills again and again, and will strive to live amongst them always. Ruskin Bond, master storyteller and connoisseur of the mysterious and macabre, shows how this love may persist to death and beyond. The stories in this collection are set amidst the mists and mellow magic of Bond's beloved mountains. The agents of the supernatural may be gentle like the fairy folk in 'On Fairy Hill', or malevolent like the well-dressed diners of 'The Prize'; humorous like the very proper witch, Miss Bellows, in 'The Black Cat', or tragic like the haunting Gulabi in 'Wilson's Bridge'. 'The Rakshasas' harks back to traditional hill spirits, while 'The Night of the Millennium' poises us tantalizingly on the brink of the future. Bond aficionados will meet familiar faces in 'Reunion at the Regal'. Rounding off this collection is a gripping mystery, 'Who Killed the Rani?', which is evocative of life in hill stations some twenty years ago. And over all the stories looms the benevolent or brooding presence of the Himalayas, described with Bond's inimitable lyricism.

This contributed volume reviews the recent progress in our understanding of membrane transport in yeast including both *Saccharomyces cerevisiae* and non-conventional yeasts. The articles provide a summary of the key transport processes and put these in a systems biology context of cellular regulation, signal reception and homeostasis. After a general introduction, readers will find review articles covering the mechanisms and regulation of transport for various substrates ranging from diverse nutrients to cations, water and protons. These articles are complemented by a chapter on extremophilic yeast, a chapter on the mathematical modelling of ion transport and two chapters on the role of transport in pathogenic yeasts and antifungal drug resistance. Each article provides both a general overview of the main transport characteristics of a specific substrate or group of substrates and the unique details that only an expert working in the field is able to transmit to the reader. Researchers and students of the topic will find this book to be a useful resource for membrane transport in yeast collecting information in one complete volume, which is otherwise scattered across many papers. This might also be interesting for scientists investigating other species in order to compare transport mechanisms with known functions in yeast with the cells on which they work.

----- A lost starship... A dire warning from futures past... A desperate search for salvation... ----- Captain Mitchell "Ares" Williams is a Space Marine and the hero of the Battle for Liberty, whose Shot Heard 'Round the Universe saved the planet from a nearly unstoppable war machine. He's handsome, charismatic, and the perfect poster boy to help the military drive enlistment. Pulled from the war and thrown into the spotlight, he's as efficient at charming the media and bedding beautiful celebrities as he was at shooting down enemy starfighters. After an assassination attempt leaves Mitchell critically wounded, he begins to suffer from strange hallucinations that carry a chilling and oddly familiar warning: They are coming. Find the Goliath or humankind will be destroyed. Convinced that the visions are a side-effect of his injuries, he tries to ignore them, only to learn that he may not be as crazy as he thinks. The enemy is real and closer than he imagined, and they'll do whatever it takes to prevent him from rediscovering the centuries lost starship. Narrowly escaping capture, out of time and out of air, Mitchell lands at the mercy of the Riggers - a ragtag crew of former commandos who patrol the lawless outer reaches of the galaxy. Guided by a captain with a reputation for cold-blooded murder, they're dangerous, immoral, and possibly insane. They may also be humanity's last hope for survival in a war that has raged beyond eternity.
