In 1956, two Bell Labs scientists discovered the scientific formula for getting rich. One was mathematician Claude Shannon, neurotic father of our digital age, whose genius is ranked with Einstein's. The other was John L. Kelly Jr., a Texas-born, gun-toting physicist. Together they applied the science of information theory—the basis of computers and the Internet—to the problem of making as much money as possible, as fast as possible. Shannon and MIT mathematician Edward O. Thorp took the "Kelly formula" to Las Vegas. It worked. They realized that there was even more money to be made in the stock market. Thorp used the Kelly system with his phenomenally successful hedge fund, Princeton-Newport Partners. Shannon became a successful investor, too, topping even Warren Buffett's rate of return. Fortune's Formula traces how the Kelly formula sparked controversy even as it made fortunes at racetracks, casinos, and trading desks. It reveals the dark side of this alluring scheme, which is founded on exploiting an insider's edge. Shannon believed it was possible for a smart investor to beat the market—and William Poundstone's Fortune's Formula will convince you that he was right.

This volume provides the definitive treatment of fortune's formula or the Kelly capital growth criterion as it is often called. The strategy is to maximize long run wealth of the investor by maximizing the period by period expected utility of wealth with a logarithmic utility function. Mathematical theorems show that only the log utility function maximizes asymptotic long run wealth and minimizes the expected time to arbitrary large goals. In general, the strategy is risky in the short term but as the number of bets increase, the Kelly bettor's wealth tends to be much larger than those with essentially different strategies. So most of the time, the Kelly bettor will have much more wealth than these other bettors but the Kelly strategy can lead to considerable losses a small percent of the time. There are ways to reduce this risk at the cost of lower expected final wealth using fractional Kelly strategies that blend the Kelly suggested wager with cash. The various classic reprinted papers and the new ones written specifically for this volume cover various aspects of the theory and practice of dynamic investing. Good and bad properties are discussed, as are fixed-mix and volatility induced growth strategies. The relationships with utility theory and the use of these ideas by great investors are featured.

How does one spot the bottom of a bear market? What brings a bear to its end? There are few more important questions to be answered in modern

finance. Financial market history is a guide to understanding the future. Looking at the four occasions when US equities were particularly cheap - 1921, 1932, 1949 and 1982 - Russell Napier sets out to answer these questions by analysing every article in the Wall Street Journal from either side of the market bottom. In the 70,000 articles he examines, one begins to understand the features which indicate that a great buying opportunity is emerging. By looking at how markets really did work in these bear-market bottoms, rather than theorising how they should work, Napier offers investors a financial field guide to making the best provisions for the future. This new edition includes a brand new preface from the author and a foreword by Merryn Somerset Webb.

Legendary economist Dr. Henry Kaufman shares a classic Wall Street story that has never been fully told: a firsthand account of the day in August 1982 that would define US economics for decades Dr. Henry Kaufman is the most famous economist Wall Street has ever seen, renowned well beyond the financial industry. He was the subject of New Yorker cartoons, had cameos in drama productions and two seminal literary works of the 1980s, was subject to death threats, and enjoyed the nickname "Dr. Doom." His pinnacle of influence arrived on August 17, 1982. That single day turned out to be the beginning of the world that we now live in. At the

time, after painful years of high interest rates and the inflation of the late 1960s and 1970s, consumers were paying 17 percent and higher to borrow money. But by the end of one summer day almost 40 years ago, the stock market had undergone its second-biggest rally since WWII, while bond prices soared and interest rates plunged. Dr. Kaufman himself had written a memo that sparked this tremendous boom—and it set the global markets on fire, marking the start of almost four decades of US economic growth. *The Day the Markets Roared* answers the questions:

- Why did Dr. Kaufman break with his longstanding bearish views to make a momentous prediction that spurred blaring headlines everywhere from Brazil to Beijing?
- How could a private individual exercise such profound influence over global financial markets?
- How did we get to today's rock-bottom and even negative rates? And what is their continuing impact on the economy, our financial markets and our livelihoods?

The Day the Markets Roared is a firsthand, minute-by-minute account of one remarkable day in financial and economic history, with a rich cast of characters, from Salomon's John Gutfreund to interest rate guru Sydney Homer, to Dr. Kaufman's longtime friend, Fed Chairman Paul Volcker. Dr. Kaufman reflects on the lessons of the historic August 1982 episode, harkening back to a more optimistic moment in American history, and offering inspiration for better

times ahead.

Read the story everyone is talking about: how a janitor struggling to put food on the table invented Flamin' Hot Cheetos in a secret test kitchen, breaking barriers and becoming the first Latino frontline worker promoted to executive at Frito-Lay. Richard Montañez is a man who made a science out of walking through closed doors, and his success story is an empowerment manual for anyone stuck in a dead-end job or facing a system stacked against them. Having taken a job mopping floors at Frito-Lay's California factory to support his family, Montañez took his future into his own hands and created the world's hottest snack food: Flamin' Hot Cheetos. This bold move not only disrupted the food industry with some much-needed spice, but also shook up a corporate culture in which everyone stayed in their lane. When a top food scientist at Frito-Lay sent out a memo telling sales and marketing to kill the new product before it made it to the store shelves—jealous that someone with no formal education beyond the sixth grade could do his job—Montañez was forced to go rogue once again to save his idea. Through creative thinking, community building, and a few powerful mindset shifts, he outsmarted the naysayers who tried to get in his way. Flamin' Hot proves that you can break out of your career rut and that your present circumstances don't have to dictate your future.

As today's preeminent doomsday investor Mark Spitznagel describes his Daoist and roundabout investment approach, "one gains by losing and loses by gaining." This is Austrian Investing, an archetypal, counterintuitive, and proven approach, gleaned from the 150-year-old Austrian School of economics, that is both timeless and exceedingly timely. In *The Dao of Capital*, hedge fund manager and tail-hedging pioneer Mark Spitznagel—with one of the top returns on capital of the financial crisis, as well as over a career—takes us on a gripping, circuitous journey from the Chicago trading pits, over the coniferous boreal forests and canonical strategists from Warring States China to Napoleonic Europe to burgeoning industrial America, to the great economic thinkers of late 19th century Austria. We arrive at his central investment methodology of Austrian Investing, where victory comes not from waging the immediate decisive battle, but rather from the roundabout approach of seeking the intermediate positional advantage (what he calls *shi*), of aiming at the indirect means rather than directly at the ends. The monumental challenge is in seeing time differently, in a whole new intertemporal dimension, one that is so contrary to our wiring. Spitznagel is the first to condense the theories of Ludwig von Mises and his Austrian School of economics into a cohesive and—as Spitznagel has shown—highly effective investment methodology. From identifying

the monetary distortions and non-randomness of stock market routs (Spitznagel's bread and butter) to scorned highly-productive assets, in Ron Paul's words from the foreword, Spitznagel “brings Austrian economics from the ivory tower to the investment portfolio.” The Dao of Capital provides a rare and accessible look through the lens of one of today's great investors to discover a profound harmony with the market process—a harmony that is so essential today.

NEW YORK TIMES BESTSELLER • A riveting, true-life legal thriller about the government’s pursuit of billionaire hedge fund manager Steven Cohen and his employees at SAC Capital—a revelatory look at the power and wealth of Wall Street **ONE OF THE BEST BOOKS OF THE YEAR**—The New York Times and The Economist • “An essential exposé of our times—a work that reveals the deep rot in our financial system . . . Everyone should read this book.”—David Grann, author of *Killers of the Flower Moon* Steven A. Cohen changed Wall Street. He and his fellow pioneers of the hedge fund industry didn’t lay railroads, build factories, or invent new technologies. Rather, they made their billions through financial speculation, by placing bets in the market that turned out to be right more often than not. Cohen was revered as one of the greatest traders who ever lived. But that image was shattered when his fund, SAC Capital, became the target of a seven-year government investigation. Prosecutors labeled SAC a “magnet for market cheaters” whose culture encouraged the relentless pursuit of “edge”—and even “black edge,” which is inside information—and the firm was ultimately indicted and pleaded guilty to charges related to a vast insider trading scheme. Cohen, himself, however, was never charged. *Black Edge* raises urgent and troubling questions about those who sit at the pinnacle of high finance and how they have reshaped the economy. A New York Times bestseller In a remarkable career, Edward O. Thorp rose up from nothing to become a professor at MIT, invented card counting and the world’s first wearable computer, beat the casinos of Las Vegas at blackjack and roulette, then became a bestselling author and a hedge fund heavyweight, ushering in a revolution on Wall Street. Now he shares his incredible life story for the first time, revealing how he made his fortune and giving advice to the next generation of investors. An intellectual thrill ride, replete with practical wisdom, A Man for All Markets is a scarcely imaginable tale of ludicrous success.

"[An] extraordinary tale"—Wall Street Journal "Compelling [and] engaging"—Financial Times "Magnificently detailed yet pacy...Think Trading Places meets Wall Street"—Sunday Times (UK) The riveting story of a trading prodigy who amassed \$70 million from his childhood bedroom—until the US government accused him of helping trigger an unprecedented market collapse On May 6, 2010, financial markets around the world tumbled simultaneously and without warning. In the span of five minutes, a trillion dollars of valuation was lost. The Flash Crash, as it became known, represented what was then the fastest drop in market history. When share values rebounded less than half an hour later, experts around the globe were left perplexed. What had they just witnessed? Navinder Singh Sarao hardly seemed like a man who would shake the world's financial markets to their core. Raised in a working-class neighborhood in West London, Nav was a preternaturally gifted trader who played the markets like a computer game. By the age of thirty, he had left behind London's "trading arcades," working instead

out of his childhood home. For years the money poured in. But when lightning-fast electronic traders infiltrated markets and started eating into his profits, Nav built a system of his own to fight back. It worked—until 2015, when the FBI arrived at his door. Depending on whom you ask, Sarao was a scourge, a symbol of a financial system run horribly amok, or a folk hero who took on the tyranny of Wall Street and the high-frequency traders. A real-life financial thriller, *Flash Crash* uncovers the remarkable, behind-the-scenes narrative of a mystifying market crash, a globe-spanning investigation into international fraud, and a man at the center of them both. The New York Times best-selling book exploring the counterproductive reactions white people have when their assumptions about race are challenged, and how these reactions maintain racial inequality. In this “vital, necessary, and beautiful book” (Michael Eric Dyson), antiracist educator Robin DiAngelo deftly illuminates the phenomenon of white fragility and “allows us to understand racism as a practice not restricted to ‘bad people’ (Claudia Rankine). Referring to the defensive moves that white people make when challenged racially, white fragility is characterized by emotions such as anger, fear, and guilt, and by behaviors including argumentation and silence. These behaviors, in turn, function to reinstate white racial equilibrium and prevent any meaningful cross-racial dialogue. In this in-depth exploration, DiAngelo examines how white fragility develops, how it protects racial inequality, and what we can do to engage more constructively.

With the immediacy of today’s NASDAQ close and the timeless power of a Greek tragedy, *The Quants* is at once a masterpiece of explanatory journalism, a gripping tale of ambition and hubris, and an ominous warning about Wall Street’s future. In March of 2006, four of the world’s richest men sipped champagne in an opulent New York hotel. They were preparing to compete in a poker tournament with million-dollar stakes, but those numbers meant nothing to them. They were accustomed to risking billions. On that night, these four men and their cohorts were the new kings of Wall Street. Muller, Griffin, Asness, and Weinstein were among the best and brightest of a new breed, the quants. Over the prior twenty years, this species of math whiz--technocrats who make billions not with gut calls or fundamental analysis but with formulas and high-speed computers--had usurped the testosterone-fueled, kill-or-be-killed risk-takers who’d long been the alpha males the world’s largest casino. The quants helped create a digitized money-trading machine that could shift billions around the globe with the click of a mouse. Few realized, though, that in creating this unprecedented machine, men like Muller, Griffin, Asness and Weinstein had

sowed the seeds for history's greatest financial disaster. Drawing on unprecedented access to these four number-crunching titans, *The Quants* tells the inside story of what they thought and felt in the days and weeks when they helplessly watched much of their net worth vaporize--and wondered just how their mind-bending formulas and genius-level IQ's had led them so wrong, so fast.

Acclaim for *The Education of a Speculator*, a provocative and penetrating look into the mind, the soul, and the strategies of one of the most controversial traders of all time "A compelling and an entertaining read." -*The Wall Street Journal* "Victor Niederhoffer gives us page after page of distilled investment wisdom. Taken together, this is pure nectar to those who aim for consistently superior stock market performance." -*Barron's* "The Education of a Speculator offers plenty of insights into the way markets work, but the epiphanies are what a reader might expect from Lao-tzu rather than, say, Graham and Dodd." -*Worth* magazine "The Education of a Speculator is the first meaningful book on speculating. Niederhoffer brings forth the best from each of these fields and shows the investor how their principles can enrich one's life and net worth." -Martin Edelston, President, Boardroom Inc., publishers of Boardroom Classics and Bottom Line/Personal "With an original mind and an eclectic approach, Victor Niederhoffer takes the reader from Brighton Beach to Wall Street, visiting all stops of interest along the way. insights, useful to the professional and layman alike."

The unbelievable story of a secretive
mathematician who pioneered the era of the
algorithm--and made \$23 billion doing it. Jim Simons is
the greatest money maker in modern financial history.

No other investor--Warren Buffett, Peter Lynch, Ray
Dalio, Steve Cohen, or George Soros--can touch his
record. Since 1988, Renaissance's signature Medallion

fund has generated average annual returns of 66
percent. The firm has earned profits of more than \$100
billion; Simons is worth twenty-three billion dollars.

Drawing on unprecedented access to Simons and
dozens of current and former employees, Zuckerman, a
veteran Wall Street Journal investigative reporter, tells

the gripping story of how a world-class mathematician
and former code breaker mastered the market. Simons
pioneered a data-driven, algorithmic approach that's
sweeping the world. As Renaissance became a market

force, its executives began influencing the world beyond
finance. Simons became a major figure in scientific
research, education, and liberal politics. Senior executive

Robert Mercer is more responsible than anyone else for
the Trump presidency, placing Steve Bannon in the
campaign and funding Trump's victorious 2016 effort.

Mercer also impacted the campaign behind Brexit. The
Man Who Solved the Market is a portrait of a modern-

day Midas who remade markets in his own image, but

failed to anticipate how his success would impact his firm and his country. It's also a story of what Simons's revolution means for the rest of us.

This book does not tell you how to make millions. But it does tell you how to avoid typical mistakes and severe losses. It also tells you which long-term performance you can expect from a trading strategy and how to verify whether a strategy really works. In particular, the Kelly criterion (also known as fortune's formula) is comprehensively discussed with portfolio management in mind. You will also learn the basics of the statistical analysis with R. Last but not least the author frankly shares his own (sometimes bitter) trading experience. In order to read this book you need a working knowledge of college mathematics. But the book is completely void of mathematical arrogance and complicated but impractical market models. The most of problems are solved by means of the Monte Carlo simulation, i.e. we let a computer work for us. R code and sample chapters are available on the author's website

A tiny American town's plans for radical self-government overlooked one hairy detail: no one told the bears. Once upon a time, a group of libertarians got together and hatched the Free Town Project, a plan to take over an American town and completely eliminate its government. In 2004, they set their sights on Grafton, NH, a barely populated settlement with one paved road. When they descended on Grafton, public funding for pretty much everything shrank: the fire department, the library, the schoolhouse. State and federal laws became meek suggestions, scarcely heard in the town's thick wilderness. The anything-goes atmosphere soon caught the attention of Grafton's neighbors: the bears. Freedom-

loving citizens ignored hunting laws and regulations on food disposal. They built a tent city in an effort to get off the grid. The bears smelled food and opportunity. A Libertarian Walks Into a Bear is the sometimes funny, sometimes terrifying tale of what happens when a government disappears into the woods. Complete with gunplay, adventure, and backstabbing politicians, this is the ultimate story of a quintessential American experiment -- to live free or die, perhaps from a bear. This international bestseller, which foreshadowed a market crash, explains why it could happen again if we don't act now. Fractal geometry is the mathematics of roughness: how to reduce the outline of a jagged leaf or static in a computer connection to a few simple mathematical properties. With his fractal tools, Mandelbrot has got to the bottom of how financial markets really work. He finds they have a shifting sense of time and wild behaviour that makes them volatile, dangerous - and beautiful. In his models, the complex gyrations of the FTSE 100 and exchange rates can be reduced to straightforward formulae that yield a much more accurate description of the risks involved. Recounts the story of how a notorious gang of MIT blackjack savants devised and received backing for a system for winning at the world's most sophisticated casinos, an endeavor that earned them more than three million dollars. Originally published as Bringing Down the House. Reissue. (A Columbia Pictures film, written by Peter Steinfeld & Allan Loeb, directed by Robert Luketic, releasing March 2008,

starring Kevin Spacey, Kate Bosworth, Laurence Fishburne, Jim Sturgess, & others) (Current Affairs) As stock prices and investor confidence have collapsed in the wake of Enron, WorldCom, and the dot-com crash, people want to know how this happened and how to make sense of the uncertain times to come. Into the breach comes one of Wall Street's legendary investors, Leon Levy, to explain why the market so often confounds us, and why those who ought to understand it tend to get chewed up and spat out. Levy, who pioneered many of the innovations and investment instruments that we now take for granted, has prospered in every market for the past fifty years, particularly in today's bear market. In *The Mind of Wall Street* he recounts stories of his successes and failures to illustrate how investor psychology and willful self-deception so often play critical roles in the process. Like his peers George Soros and Warren Buffett, Levy takes a long and broad view of the rhythms of the markets and the economy. He also offers a provocative analysis of the spectacular Internet bubble, showing that the market has not yet completely recovered from its bout of "irrational exuberance." *The Mind of Wall Street* is essential reading for all of us, whether we are active traders or simply modest contributors to our 401(k) plans, as volatile and unnerving markets come to define so much of our net worth.

In *My Life as a Quant*, Emanuel Derman relives his

exciting journey as one of the first high-energy particle physicists to migrate to Wall Street. Page by page, Derman details his adventures in this field—analyzing the incompatible personas of traders and quants, and discussing the dissimilar nature of knowledge in physics and finance. Throughout this tale, he also reflects on the appropriate way to apply the refined methods of physics to the hurly-burly world of markets.

The traits that make Sam Zell one of the world's most successful entrepreneurs also make him one of the most surprising, enigmatic, and entertaining mavericks in American business. Self-made billionaire Sam Zell consistently sees what others don't. From finding a market for overpriced Playboy magazines among his junior high classmates, to buying real estate on the cheap after a market crash, to investing in often unglamorous industries with long-term value, Zell acts boldly on supply and demand trends to grab the first-mover advantage. And he can find opportunity virtually anywhere—from an arcane piece of legislation to a desert meeting in Abu Dhabi. "If everyone is going left, look right," Zell often says. To him, conventional wisdom is nothing but a reference point. Year after year, deal after deal, he shuts out the noise of the crowd, gathers as much information as possible, then trusts his own instincts. He credits much of his independent thinking to his parents, who were Jewish refugees from World War

II. Talk to any two people and you might get wild swings in their descriptions of Zell. A media firestorm ensued when the Tribune Company went into bankruptcy a year after he agreed to steward the enterprise. At the same time, his razor-sharp instincts are legendary on Wall Street, and he has sponsored over a dozen IPOs. He's known as the Grave Dancer for his strategy of targeting troubled assets, yet he's created thousands of jobs. Within his own organization, he has an inordinate number of employees at every level who are fiercely loyal and have worked for him for decades. Zell's got a big personality; he is often contrarian, blunt, and irreverent, and always curious and hardworking. This is the guy who started wearing jeans to work in the 1960s, when offices were a sea of gray suits. He's the guy who told *The Wall Street Journal* in 1985, "If it ain't fun, we don't do it." He rides motorcycles with his friends, the Zell's Angels, around the world and he keeps ducks on the deck outside his office. As he writes: "I simply don't buy into many of the made-up rules of social convention. The bottom line is: If you're really good at what you do, you have the freedom to be who you really are." *Am I Being Too Subtle?*—a reference to Zell's favorite way to underscore a point—takes readers on a ride across his business terrain, sharing with honesty and humor stories of the times he got it right, when he didn't, and most important, what he learned in the process.

This is an indispensable guide for the next generation of disrupters, entrepreneurs, and investors.

This classic fifteenth-century chronicle of King Arthur and his knights is the essential interpretation of Arthurian legend in the English language. Full of adventure, magic, and romance, these are the timeless tales of Arthur, the great warrior king of Britain; his loyal knight Lancelot; the beautiful Queen Guinevere; and the mysterious Merlin. Based on French Arthurian romances reaching back to the twelfth century, Sir James Knowles's narrative tells of the goings-on at Camelot, epic battles against invading Saxon enemies, and Arthur's quest for the Holy Grail, among many other exciting events.

Sometimes published as *Le Morte d'Arthur*, these accounts of chivalry and daring escapades have inspired generations of storytellers, from the Romantic poet Alfred, Lord Tennyson to T. H. White, author of *The Once and Future King*, from American satirist Mark Twain to British comedy troupe Monty Python.

The incredible true story of the card-counting mathematics professor who taught the world how to beat the dealer and, as the first of the great quantitative investors, ushered in a revolution on Wall Street. A child of the Great Depression, legendary mathematician Edward O. Thorp invented card counting, proving the seemingly impossible:

that you could beat the dealer at the blackjack table. As a result he launched a gambling renaissance. His remarkable success—and mathematically unassailable method—caused such an uproar that casinos altered the rules of the game to thwart him and the legions he inspired. They barred him from their premises, even put his life in jeopardy. Nonetheless, gambling was forever changed. Thereafter, Thorp shifted his sights to “the biggest casino in the world”: Wall Street. Devising and then deploying mathematical formulas to beat the market, Thorp ushered in the era of quantitative finance we live in today. Along the way, the so-called godfather of the quants played bridge with Warren Buffett, crossed swords with a young Rudy Giuliani, detected the Bernie Madoff scheme, and, to beat the game of roulette, invented, with Claude Shannon, the world’s first wearable computer. Here, for the first time, Thorp tells the story of what he did, how he did it, his passions and motivations, and the curiosity that has always driven him to disregard conventional wisdom and devise game-changing solutions to seemingly insoluble problems. An intellectual thrill ride, replete with practical wisdom that can guide us all in uncertain financial waters, *A Man for All Markets* is an instant classic—a book that challenges its readers to think logically about a seemingly irrational world. Praise for *A Man for All Markets* “In *A Man for All Markets*, [Thorp] delightfully recounts his progress (if

that is the word) from college teacher to gambler to hedge-fund manager. Along the way we learn important lessons about the functioning of markets and the logic of investment.”—The Wall Street Journal “[Thorp] gives a biological summation (think Richard Feynman’s Surely You’re Joking, Mr. Feynman!) of his quest to prove the aphorism ‘the house always wins’ is flawed. . . . Illuminating for the mathematically inclined, and cautionary for would-be gamblers and day traders”— Library Journal Reprint. Originally published: New York: Vintage Books, 1966.

Since its hardcover publication in August of 1995, Buffett has appeared on the Wall Street Journal, New York Times, San Francisco Chronicle, Los Angeles Times, Seattle Times, Newsday and Business Week bestseller lists. Starting from scratch, simply by picking stocks and companies for investment, Warren Buffett amassed one of the epochal fortunes of the twentieth century—an astounding net worth of \$10 billion, and counting. His awesome investment record has made him a cult figure popularly known for his seeming contradictions: a billionaire who has a modest lifestyle, a phenomenally successful investor who eschews the revolving-door trading of modern Wall Street, a brilliant dealmaker who cultivates a homespun aura. Journalist Roger Lowenstein draws on three years of unprecedented access to Buffett's family, friends, and colleagues to provide the first definitive, inside account of the life and career of this American original. Buffett explains Buffett's investment strategy—a long-term philosophy grounded in buying stock in companies that are undervalued on the market and hanging on until their worth invariably surfaces—and shows how it is a reflection of his inner self.
