Just Security in an Undergoverned World examines how humankind can manage global problems to achieve both security and justice in an age of antithesis.

Global connectivity is increasing, visibly and invisibly in trade, finance, culture, and information helping to spur economic growth, technological advance, and greater understanding and freedom, but global disconnects are growing as well.

Ubiquitous electronics rely on high-value minerals scraped from the earth by miners kept poor by corruption and war. People abandon burning states for the

often indifferent welcome of wealthier lands whose people, in turn, draw into themselves. Humanity's very success, underwritten in large part by lighting up

gigatons of long-buried carbon for 200 years, now threatens humanity's future.

The global governance institutions established after World War II to manage global threats, especially the twin scourges of war and poverty, have expanded in

reach and impact, while paradoxically losing the political support of some of their wealthiest and most powerful members. Their problems mimic those of their

members in struggling to adapt to new problems and maintain trust in norms and public bodies. This volume argues, however, that a properly mandated,

managed, and modernized global architecture offers unparalleled potential to midwife solutions to intractable issues from violent conflict and climate change to

poverty and pandemic disease that transcend borders and the capacities of individual actors. It offers just security as a new framework for charing innovating

solutions and strategies for effective and essential global governance.

This book examines cooperation between the US and the EU on financial regulatory reform, notably at the outset and the first three years of the global financial crisis. It discusses the development of US-EU cooperation on financial regulation over the last few decades at several levels, including at heads of state level, markets regulator level and at international level, and progresses with a detailed examination of cooperation at the outset of the financial crisis. It looks at the nature of and motivation for intense US-EU cooperation on coordinating a response to the crisis and presents a compelling argument that a defacto alliance was formed, which served to benefit respective US and EU interests domestically and in the international financial system. Providing a new perspective on financial regulatory reform after the last financial crisis and the relationship of regulatory outcomes to international financial governance, this volume will be of use to researchers interested in transatlantic relations, financial regulation, international relations, global governance, and the European Union, as well as professionals and policymakers working in foreign relations, financial markets, or banking

policy.

Public Budgeting in African Nations aims to provide usable budgeting and fiscal policy management information to development practitioners interested in improving the performance of governments in the context of good governance. It shares regional and cross-cultural experiences with international audiences and gives reflective attention to comparative budgeting and fiscal policy management. With a promising economic and fiscal forecast, such information is timely for international development practitioners and for scholars and researchers interested in advancing development management. This book adopts an interdisciplinary/pragmatic approach to analyze and present research findings on public budgeting as a sustainable development tool. The central argument is that development practice will benefit from a bottom-up, decentralized approach to budgeting and fiscal policy management, involving national, sub-national, and civil society institutions. From this perspective, a balanced budget should draw from and reflect values and priorities across the full spectrum of social and political life.

Accounting is frequently portrayed as a value free mechanism for allocating resources and ensuring they are employed in the most efficient manner. Contrary to this popular opinion, the research presented in Accounting at War demonstrates that accounting for military forces is primarily a political practice. Throughout history, military force has been so pervasive that no community of any degree of complexity has succeeded in. Through to the present day, for all nation states, accounting for the military and its operations has primarily served broader political purposes. From the Crimean War to the War on Terror, accounting has been used to assert civilian control over the military, instill rational business practices on war, and create the visibilities and invisibilities necessary to legitimize the use of force. Accounting at War emphasizes the significant power that financial and accounting controls gave to political elites and the impact of

these controls on military performance. Accounting at War examines the effects of these controls in wars such as the Crimean, South African and Vietnam wars. Accounting at War also emphasizes how accounting has provided the means to rationalize and normalize violence, which has often contributed to the acceleration and expansion of war. Aimed at researchers and academics in the fields of accounting, accounting history, political management and sociology, Accounting at War represents a unique and critical perspective to this cutting-edge research field.

The updated and expanded third edition of this book focuses on the multi-disciplinary coupling between flight-vehicle hardware alternatives and enabling propulsion systems. It discusses how to match near-term and far-term aerospace vehicles to missions and provides a comprehensive overview of the subject, directly contributing to the next-generation space infrastructure, from space tourism to space exploration. This holistic treatment defines a mission portfolio addressing near-term to long-term space transportation needs covering sub-orbital, orbital and escape flight profiles. In this context, a vehicle configuration classification is introduced covering alternatives starting from the dawn of space access. A best-practice parametric sizing approach is introduced to correctly design the flight vehicle for the mission. This technique balances required mission with the available vehicle solution space and is an essential capability sought after by technology forecasters and strategic planners alike.

Funded by taxation, public spending cannot be separated from politics and ensuring efficiency and effectiveness is always high on the political and policy agenda. Accounting, accountability, governance and auditing are essential ingredients in evaluating public sector performance. Australia and New Zealand are world leaders when it comes to public sector accounting—such as being the first to introduce transaction-neutral accounting standards. This edited collection considers current issues impacting the public sector by primarily drawing upon experiences of Australia and New Zealand. Then, by combining history (from the time of the Domesday book, early sovereignty and Shakespeare) with current practice (differential reporting, international financial reporting standards, government performance, voter turnout, joined-up government and auditing practices), we use these experiences to illuminate the global issues of public sector accounting, accountability and governance. Based on rigorous research by top public

This book investigates the legitimacy of the current Australian Financial Services Licensee-Authorised Representative (AFSL-AR) licensing model, as specified in the Commonwealth Corporations Act 2001. The book rectifies the deficiency in scholarly attention to this matter by developing a new conceptualised framework for the financial planning discipline. It takes into account theories in agency, legislation, legitimacy and the independent individual regulatory regimes in other professions; thereafter integrating this framework with the financial planning

theory to examine the legitimacy, or what was found to be the illegitimacy of licensing advisers via multiple third party conflicted commercially oriented licensees. This book makes a very useful reference to understanding financial planning licencing model in Australia.

This book deals with the debated relationship between the characteristics of national supervision and manipulative practices in banks annual reports, with a specific focus on income smoothing. The issue is quite challenging as, since the 2008 financial crisis, governmental bodies and regulators have stressed the crucial role of supervision for bank transparency purposes, but the effect of supervision on accounting manipulation is still discussed. Focusing on European banks, the book investigates whether the characteristics of national supervision affect bank propensity to smooth income, also considering the potential role of bank business models. By exploring a broad range of national supervisions characteristics, the book presents a comprehensive view on the influence of country-level institutional settings on a form of earnings management widely used across the banking industry.

The Chinese economy has entered a new phase of development in which sources of growth are not so much dependent upon pure increases in labour, investment and credit expansion, but from productivity improvement, structural changes, technological progress and the benefits from improvement of the social security and welfare improvement. When market functions are fully established to become a main channel for allocating resources, the entrepreneurship will flourish engaging in more innovative activities, workers will move more freely and have more incentives to improve their skills, firms will become more productive through market entry and exit, the economic structure will become more balanced because of the improved resource allocation, and in the end, growth will become more spontaneous and sustainable. In this sense, reforms could deliver 'dividend' by raising China's potential economic growth rates. For China to confront all the challenges it faces at present, the reforms undertaken now have to be deep, comprehensive and far-reaching in order to succeed in paving the way for China to complete the task of transformation in the long-term. There is no better alternative than deepening the market-oriented reform in advancing the course of China's modernisation for future development and prosperity and lifting China to the status of a developed economy in the next two decades. The recent China update books have covered the topic of reform from different angles and this new book is another attempt to address this important issue.

This Global edition has been designed specifically to meet the needs of international financial accounting students. The text successfully implements a real-world, single focus company approach in every chapter. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting in the real world. In addition to the latest examples of both contemporary and traditional topics, new material has been added to make the content more relevant and improve learning outcomes for the international student.

Also available as an e-book The book argues that the decision-making processes within international organizations and other global governance bodies ought to be subjected to procedural and substantive legal constraints that are associated domestically with the requirements of the rule of law. The book explains why law — international, regional, domestic, formal or soft — should restrain global actors in the same way that judicial oversight is applied to domestic administrative agencies. It outlines the emerging web of global norms designed to protect the rights and interests of all affected individuals, to enable public deliberation, and to promote the legitimacy of the global bodies. These norms are being shaped by a growing convergence of expectations of global institutions to ensure public participation and representation, impartiality and independence of decision-makers, and accountability of decisions. The book explores these mechanisms as well as the political and social forces that are shaping their development by analysing the emerging judicial practice concerning a variety of institutions, ranging from the UN Security Council and other formal organizations to informal and private standard-setting bodies.

Our Study Text is the only P6 text reviewed by the examiner. It covers the entire syllabus at just the right level. There is a chapter towards the end of the text devoted to tax planning and ethics. The questions are at a level designed to aid your transition towards the examination standard questions that you will find in BPP Learning Media's Practice and Revision kit.

It is often assumed that shareholders have rights, not duties. In recent years, however, this assumption has come under intense scrutiny in all aspects of company law and capital market law - legislation, the courts, soft law, and scholarship - and, in Europe especially, major changes are under way across a diverse spectrum all the way from revised contractual arrangements to mandatory statutory provisions. Such a shift has important implications for the fundamentals of European company law, and there is a need to examine shareholders' duties and to consider where this trend is taking shareholders and their stance in law. This focused collection of essays by twenty notable scholars addresses this complex subject from a highly informative and useful variety of perspectives. Examining shareholders' duties along three axes - types of investee companies, types of shareholders, and types of business situations - the essays deal with such topics and issues as the following: - shareholders' duties as reflections of the interests they are intended to safeguard; - shareholders' duties to society; - shareholders' disclosure obligations; - duties of parent companies; - institutional investor's fiduciary duty; - how regulatory duties constrain value-reducing forms of opportunism; - the state's continuing duties in the transformation of state-owned companies; - significant shareholders' duties in transactions with the company; and - powerful shareholders' duty not to abuse right. Examining the implications of this shift in discourse - how shareholders' duties are

coming to the fore under the impetus of legislation, legal doctrine, case law, and enforcement strategies - as well as its ideological underpinnings, this book offers a comprehensive and in-depth consideration of this rapidly developing field. It will prove of inestimable value not only to policymakers and academics, but also to investors and practitioners committed to creating conditions favourable to sustainable economic growth and responsible business behaviour. This book comprises nine chapters drawn from the papers presented at the fourth annual conference of the African Accounting and Finance Association which took place in Somerset West, South Africa in 2014. The chapters address a number of aspects of accounting, ranging from the adoption of IFRS for SMEs in Africa, the compliance by SMEs with IFRS for SMEs in Ghana, the provision of finance to small businesses, drivers of corporate failures, financial regulations, the audit of casinos, the auditors' report and investment decisions, the role of government audit committees, and audit fees and audit quality.
