This book addresses an important issue -- the nature of and evidence for success in the transfer costing of internal services or shared services or products within a company. The case of activity-based costing (ABC) is used to explore how the proponents have developed a framework linking Quality, Cost and Delivery (QCD) components of products and services. The QCD performance indices, which are the natural properties of products and services, will form part of the Service Level Agreements between the internal service providers (Shared Services Centers) and internal customers (Profit Centers) of the company. This framework optimizes the use of overhead expenses to the end products of the company. This book also discusses the various cost components of the products and services using the full absorption costing principle. It is a revolutionary idea in the sense that all activity costs are considered variable costs and product costs come from activity costs using various cost drivers. The Principal Component Analysis (PCA), the multi-variate statistical tool, is applied using SPSS to analyze which independent variables contribute significantly to the Product Unit Price (PUP) and which should be given more emphasis in decision making process.

In recent years, we have witnessed change in organizational accountability, especially toward investment in people, programs, projects, and processes. Project sponsors and those who have responsibility for project success have always been concerned about the value of their initiatives. Today this concern translates into financial impact-the actual monetary contribution from a project or program. Although monetary value is becoming a critical concern, it is the comparison of this value with the project costs that captures stakeholders' attention-and translates into ROI. "Show me the money" is the familiar response from individuals asked to invest (or continue to invest) in organizational efforts. At times, this response is appropriate. At other times, it may be misguided; measures not subject to monetary conversion are also important, if not critical, to most projects. However, excluding the monetary component from a success profile is unacceptable in this age of the "show me" generation. The monetary value is often required before a project is approved. Sometimes, it is needed as the project is being designed and developed. Other times, it is needed after project implementation. This issue is compounded by concern that most projects today fail to live up to expectations. A systematic process is needed that can identify barriers to and enablers of success and can drive organizational improvements. The challenge lies in doing it-developing the measures of value, including monetary value, when they are needed and presenting them in a way so that stakeholders can use them
