AN INDEPENDENT BEST BOOKS ON RELIGION 2014 PICK Few things provoke controversy in the modern world like the religion brought by Prophet Muhammad. Modern media are replete with alarm over jihad, underage marriage and the threat of amputation or stoning under Shariah law. Sometimes rumor, sometimes based on fact and often misunderstood, the tenets of Islamic law and dogma were not set in the religion's founding moments. They were developed, like in other world religions, over centuries by the clerical class of Muslim scholars. Misquoting Muhammad takes the reader back in time through Islamic civilization and traces how and why such controversies developed, offering an inside view into how key and controversial aspects of Islam took shape. From the protests of the Arab Spring to Istanbul at the fall of the Ottoman Empire, and from the ochre red walls of Delhi's great mosques to the trade routes of the Indian Ocean world, Misquoting Muhammad lays out how Muslim intellectuals have sought to balance reason and revelation, weigh science and religion, and negotiate the eternal truths of scripture amid shifting values.

Multiple myeloma is currently still an incurable disease, but during the past decade knowledge of its molecular pathogenesis has increased rapidly. This has led to remarkable progress in both diagnosis and therapy, including in particular the approval of novel and first-in-class drugs such as thalidomide, bortezomib, and lenalidomide. This book, written by internationally acknowledged experts, covers a wide range of topics relating to multiple myeloma, including history, epidemiology, pathophysiology, clinical features, staging, and prognostic systems. The principal focus, however, is on therapy, with detailed information on the various promising treatment options which give hope that this cancer will be transformed into a chronic disease or even become curable. Individualized therapy and the variety of supportive treatment options, as described in this volume, will help in achieving this goal, as well as in reducing adverse events and improving quality of life.

As minimal access approaches to cancer diagnosis, staging, and therapy become more widely used, it is vital for general surgeons, along with laparoscopists, surgical oncologists and medical oncologists, to stay up to date. The editors, a team consisting of a renowned surgical oncologist and a laparoscopic specialist, aim to provide a resource for the practicing general surgeon using basic minimally invasive

techniques. The book discusses diagnosis including biopsy with microinstrumentation, staging, and palliative and curative resection. Specific tumor sites are addressed, including esophagus, stomach, spleen, small bowel, pancreato-biliary, hepatic resection, and colo-rectal resection. Minimally invasive approaches to the thoracic and retroperitoneal areas are included. The book provides a thorough overview of basic cancer biology, instrumentation, and ultrasound. Additionally, Greene and Heniford explore controversial issues such as port-site recurrence and the effect of pneumoperitoneum on the spread of cancer cells in the abdomen. Many photographs and line drawings, including 16 in full color, illustrate the principles discussed in the text. A must-have for every practicing general surgeon, laparoscopic fellow, and general surgery resident.
