In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates-and critics. Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest. In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh "Boom" Trenchard of Great Britain and William "Billy" Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet's central vision-that command of the air is all important in modern warfare-has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq.

Meteorology is at the top of the list as far as pilot "must-knows." Pilots not only have to know the intricacies of weather, but must understand weather to survive. This book will take any student, or seasoned pilot, from the basics of the atmosphere's composition to the topic of space weather. It's 32 chapters on the "A to Z" of aviation weather for Canadian pilots, and for others affiliated with the dynamic world of aviation weather!

Colonel Slife chronicles the influence of the late Gen Wilbur L. "Bill" Creech7a leader, visionary, warrior, and mentor7in the areas of equipment and tactics, training, organization, and leader development. His study serves both to explain the context of a turbulent time in our Air Force's history and to reveal where tomorrow's airmen may find answers to some of the difficult challenges facing them today. Colonel Slife, who addresses such controversial topics as the development of the Army's AirLand Battle doctrine and what it meant to airmen, is among the first to describe what historians will surely see in years to come as the revolutionary developments of the late 1970s/early 1980s and General Creech's central role. Creech Blue enlightens the Air Force on its strongly held convictions during that period and challenges the idea that by 1990, when Iraq invaded Kuwait, the Air Force had forgotten how to wage a "strategic" air campaign and was dangerously close to plunging into a costly and lengthy war of attrition had it not been for the vision of a small cadre of thinkers on the Air Staff. In exploring the doctrine and language of the decade leading up to Operation Desert Storm, Colonel Slife reveals that the Air Force was not as shortsighted as many people have argued.

"Captains Class" is an extra module in the pilot upgrade training that air carriers use to train new captains. It is typically thought of by captain candidates as the capstone of training, enabling pilots to operate each flight and each trip as a good leader. Yet not every Captains Class provides tricks of the trade, pointers on leadership, or sage advice on how to put everything together. Every pilot knows, though, that when everything seems to be going wrong, everyone looks to the Captain --- the Pilot-In-Command --- to make things right. Pilots In Command: Your Best Trip, Every Trip fills a void in the aviation industry today, especially with the increased demand for a new cadre of airline pilots to fill the shoes of retirees, real advice from real pilots about how to be true leaders is both a rarity and a necessity. This book, in an easy-to-use format, will go beyond what is required by flight training curricula and provide practical, sage advice to student and professional aviators alike on a range of topics, all tying to the application of basic leadership skills. Pilots In Command is packed with information, techniques, and advice. The author covers crew roles, crew briefings, flight attendants, crew resource management (CRM), threat and error management (TEM), ground services, dispatch, customer service, abnormal and emergency situations, layovers, crew dynamics, career development, and professional standards. Pilots In Command will provide you with the information schools aren't required to teach in ground school--information that you would only get from experience and deep, thoughtful chats with your fellow pilots at 30,000 feet"--Provided by publisher.

Presents information on flight operations in aircraft with the latest "glass cockpit" advanced avionics systems, covering such topics as automated flight control, area navigation, weather data systems, and primary flight display failures.

The Tongue and Quill has been a valued Air Force resource for decades and many Airmen from our Total Force of uniformed and civilian members have contributed their talents to various editions over the years. This revision is built upon the foundation of governing directives and user's inputs from the unit level all the way up to Headquarters Air Force. A small team of Total Force Airmen from the Air University, the United States Air Force Academy, Headquarters Air Education and Training Command (AETC), the Air Force Reserve Command (AFRC), Air National Guard (ANG), and Headquarters Air Force compiled inputs from the field and rebuilt The Tongue and Quill to meet the needs of today's Airmen. The team put many hours into this effort over a span of almost two years to improve the content, relevance, and organization of material throughout this handbook. As the final files go to press it is the desire of The Tongue and Quill team to say thank you to every Airman who assisted in making this edition better; you have our sincere appreciation! The privilege of commanding an Air Force squadron, despite its heavy responsibilities and unrelenting challenges, represents for many Air Force officers the high point of their careers. It is service as a squadron commander that accords true command authority for the first time. The authority, used consistently and wisely, provides a foundation for command. As with the officer's commission itself, command authority is granted to those who have earned it, both by performance and a revealed capacity for the demands of total responsibility. But once granted, it must be revalidated every day. So as one assumes squadron command, bringing years of experience and proven record to join with this new authority, one might still need a little practical help to success with the tasks of command. This book offers such help. "Commanding an Air Force Squadron" brings unique and welcome material to a subject other books have addressed. It is rich in practical, useful, down-to-earth advice from officers who have recently experienced squadron command. The author does not quote regulations, parrot doctrine, or paraphrase the abstractions that lace the pages of so many books about leadership. Nor does he puff throughout the manuscript about how he did it. Rather, he presents a digest of practical wisdom based on real-world experience drawn from the reflection of many former commanders from any different types of units. He addresses all Air Force squadron commanders, rated and nonrated, in all sorts of missions worldwide. Please also see a follow up to this book entitled "Commanding an Air Force Squadron in the Twenty-First Century (2003)" by Jeffrey F. Smith, Lieutenant Colonel, USAF.

A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information.
