TRB's Airport Cooperative Research Program (ACRP) Report 25, Airport Passenger Terminal Planning and Design comprises a guidebook, spreadsheet models, and a user's guide in two volumes and a CD-ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design. Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides, in a single reference document, the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport passenger terminals. Volume 1 addresses the airside, terminal building, and landside components of the terminal complex. Volume 2 of ACRP Report 25 consists of a CD-ROM containing 11 spreadsheet models, which include practical learning exercises and several airport-specific sample data sets to assist users in determining appropriate model inputs for their situations, and a user's guide to assist the user in the correct use of each model. The models on the CD-ROM include such aspects of terminal planning as design hour determination, gate demand, check-in and passenger and baggage screening, which require complex analyses to support planning decisions. The CD-ROM is also available for download from TRB's website as an ISO image.

This manual provides an overview of both criminal justice and public safety. It discusses the relevant agencies, their functions, and the information systems typically used by these agencies. It contains an extensive glossary and lists functional standards, funding agencies, justice organizations and associations and their websites. It was primarily written for any technologist or business analyst tasked with working on information systems within the fields of criminal justice and public safety.

The 1982 statistics on the use of family planning and infertility services presented in this report are preliminary results from Cycle III of the National Survey of Family Growth (NSFG), conducted by the National Center for Health Statistics. Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15-44. A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received. Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date. Overall, 79% of currently mrried nonsterile women reported using some type of family planning service during the previous 3 years. There were no statistically significant differences between white (79%), black (75%) or Hispanic (77%) wives, or between the 2 income groups. The 1982 survey questions were more comprehensive than those of earlier cycles of the survey. The annual rate of visits for family planning services in 1982 was 1077 visits /1000 women. Teenagers had the highest annual visit rate (1581/1000) of any age group for all sources of family planning services combined. Visit rates declined sharply with age from 1447 at ages 15-24 to 479 at ages 35-44. Similar declines with age also were found in the visit rates for white and black women separately. Nevertheless, the annual visit rate for black women (1334/1000) was significantly higher than that for white women (1033). The highest overall visit rate was for black women 15-19 years of age (1867/1000). Nearly 2/3 of all family planning visits were to private medical sources. Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources, as did black women age 15-24. White women age 20 and older had higher visit rates to private medical services than to clinics. Never married women had higher visit rates to clinics than currently or formerly married women. Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term. About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview. During the 3 years before interview, about 1.9 million women had infertility visits. For all ever married women, as well as for white and black women separately, infertility services were more likely to be secured from private medical sources than from clinics. The survey design, reliability of the estimates and the terms used are explained in the technical notes.

The United States is in the midst of the largest military demobilization in its history. This is leading to an increase in the demand for mental health clinicians who can provide services to hundreds of thousands of military veterans and members of the military. Nearly two million Americans have been deployed to the wars in the Middle East, and thousands of them have been deeply affected, either psychologically, physically, or both. Projections suggest that 300,000 are returning with symptoms of PTSD or major Depression; 320,000 have been exposed to probable Traumatic Brain Injuries; and hundreds of thousands are dealing with psychological effects of physical injuries. Other veterans and members of the military without injuries will seek treatment to help them with the psychological impact of serving in the military, being deployed, or transitioning and reintegrating back into the civilian world. As an example, hundreds of thousands of service members are also leaving the armed forces earlier than they anticipated and will need to quickly adjust to life as civilians after assuming that they would have many more years in the military. Many will be leaving the military because of demobilizations and downsizing due to budget cuts. Current proposed cuts will shrink the military force to the same size it was in 1940. The Pew Center reports that 44% of veterans from the current wars are describing their readjustment to civilian life as "difficult," and many of them are and will be turning to civilian mental health and primary care clinicians for assistance. The Handbook of Psychosocial Interventions for Veterans and Service Members is a "one stop" handbook for non-military clinicians working with service members, veterans, and their families. It brings together experts from the Department of Defense, the Department of Veterans Affairs, veteran service organizations, and academia to create the first comprehensive guidebook for civilian clinicians. In addition to covering psychiatric disorders such as depression, anxiety, and PTSD, this book also offers information about psychosocial topics that impact military personnel and their loved ones and can become part of treatment (e.g., employment or education options, financial matters, and parenting concerns), providing the most recent and cutting-edge research on the topics. Chapters are concise and practical, delivering the key information necessary to orient clinicians to the special needs of veterans and their families. The Handbook of Psychosocial Interventions for Veterans and Service Members is an essential resource for private practice mental health clinicians and primary care physicians, as well as a useful adjunct for VA and DOD psychologists and staff.

Improving Maths and English in Further Education provides a strategic, practical and easily applied toolkit for teachers and leaders as they work with students to gain core skills. The book highlights the unique challenges that are faced within the sector and the value of embedding college-wide literacy and numeracy for success, providing a range of strategies to resolve challenges. Structured to make sure that there is always an alternative approach, method or suggestion, the book allows the reader to choose the steps that suit their context best. Each chapter looks at the key priorities: •Identifies a range of potential solutions to a challenge faced in FE •Acknowledges potential implementation pitfalls and remedies •Suggests practical

takeaways, key considerations and next steps Teachers and staff within further and Post-16 education will find this an essential resource for supporting students studying maths and English. "Teachers and leaders from curriculum areas across the sector will find scenarios and anecdotes that resonate in this book; timetabling, accountability, motivation… a must read." Catherine Sezen, Senior Policy Manager – FE "This is an interesting and engaging read from Jonny, who has produced a book that brings together contemporary educational literature, with a personal and honest take on leading and teaching English and Maths in FE." Steven Wallis, Executive Director Quality, NCG "This book caters for the many different voices, people and characters in FE - it does exactly what it says on the tin... It will give you all the tools for a great job with an evidence base to boot." Julia Smith, @tessmaths Jonathan Kay has managed and led English and maths departments in Further Education since 2017, as well as working as consultant for the Association of Colleges and Lead English Expert and examiner for a leading exam board. The aviation industry has seen dramatic changes in the past two decades with significant growth during the 1990s; a significant industry disruptive event on September 11, 2001; and an economic decline resulting in a sharp rise in fuel prices that has substantially changed the economics of airline operations and a decline in growth. During this period, airlines have adapted to the changes in various ways, many of which have resulted in adaptability issues for airport operators, thus raising the question of "is there a better way" to be more flexible and responsive to airline service changes in good and bad times. From an airline perspective, cost reduction since September 11 has been a prominent focus. From an airport operator perspective, adapting to and accommodating changing flight services by incumbent carriers as well as new entrant services has been a key focus. In recent years, offering more cost-effective solutions to retain or encourage new services in the face of service reductions has become a key focus. Airport operator interests in common use have been heightened by the potential for achieving a reasonable balance between airline and airport operator interests. The implications of transitioning from a traditional model (of airline facility use and leasing focused on dedicated facilities) to common use has elicited varying and, often, conflicting perceptions of benefit and cost.

Why are so many people attracted to narrative fiction? How do authors in this genre reframe experiences, people, and environments anchored to the real world without duplicating "real life"? In which ways does fiction differ from reality? What might fictional narrative and reality have in common—if anything? By analyzing novels such as Arundhati Roy's The God of Small Things, Amitav Ghosh's The Glass Palace, Zadie Smith's White Teeth, and Hari Kunzru's The Impressionist, along with selected Latino comic books and short fiction, this book explores the peculiarities of the production and reception of postcolonial and Latino borderland fiction. Frederick Luis Aldama uses tools from disciplines such as film studies and cognitive science that allow the reader to establish how a fictional narrative is built, how it functions, and how it defines the boundaries of concepts that appear susceptible to limitless interpretations. Aldama emphasizes how postcolonial and Latino borderland narrative fiction authors and artists use narrative devices to create their aesthetic blueprints in ways that loosely guide their readers' imagination and emotion. In A User's Guide to Postcolonial and Latino Borderland Fiction, he argues that the study of ethnic-identified narrative fiction must acknowledge its active engagement with world narrative fictional genres, storytelling modes, and techniques, as well as the way such fictions work to move their audiences.

Although organizations that store, process, or transmit cardholder information are required to comply with payment card industry standards, most find it extremely challenging to comply with and meet the requirements of these technically rigorous standards. PCI Compliance: The Definitive Guide explains the ins and outs of the payment card industry (PCI) security standards in a manner that is easy to understand. This step-by-step guidebook delves into PCI standards from an implementation standpoint. It begins with a basic introduction to PCI compliance, including its history and evolution. It then thoroughly and methodically examines the specific requirements of PCI compliance. PCI requirements are presented along with notes and assessment techniques for auditors and assessors. The text outlines application development and implementation strategies for Payment Application Data Security Standard (PA-DSS) implementation and validation. Explaining the PCI standards from an implementation standpoint, it clarifies the intent of the standards on key issues and challenges that entities must overcome in their quest to meet compliance requirements. The book goes beyond detailing the requirements of the PCI standards to delve into the multiple implementation strategies available for achieving PCI compliance. The book includes a special appendix on the recently released PCI-DSS v 3.0. It also contains case studies from a variety of industries undergoing compliance, including banking, retail, outsourcing, software development, and processors. Outlining solutions extracted from successful real-world PCI implementations, the book ends with a discussion of PA-DSS standards and validation requirements.

Aircraft Communications Addressing and Reporting System (ACARS) is a digital datalink system for transmission of short,and relatively simple messages between aircraft and ground stations using the airband VHF radio link. The message protocol was designed by Aeronautical Radio Incorporated (ARINC) to replace their VHF voice service and deployed in 1978 using telex type format. SITA, a multinational information technology company, later augmented their worldwide data network by adding ground radio stations to provide ACARS service.
