Managing Apple Devices covers a wide range of technologies that help you manage both iOS and OS X devices. This guide will teach you to formulate an effective plan for deploying and maintaining groups of Apple devices using iOS 7 and OS X Mavericks. You will be introduced to a variety of Apple management technologies including Mobile Device Management, the Volume Purchase Program, and the Device Enrollment Program. You will learn the theory behind these tools and may work through practical exercises that teach you to use the tools. For example, not only will you learn how to use Profile Manager—Apple's implementation of Mobile Device Management—but you will also learn about the ideas behind profile management, how to make configuration easier for both administrators and users while maintaining a highly secure environment. The exercises contained within this guide are designed to let you explore and learn the

tools provided by Apple for deploying and managing iOS and OS X systems. These exercises move along in a somewhat linear fashion, starting with verification of access to necessary services, moving on to the configuration of those services, and finally testing the results of those services on client devices. Each subsequent lesson and exercises can be seen as building on previous topics, with more advanced topics towards the end of the guide. Each lesson in this guide is designed to give technical coordinators and system administrators the skills, tools, and knowledge to deploy and maintain Apple devices by:

- Providing knowledge of how Apple deployment technologies work
- Showing how to use specific deployment tools
- Explaining deployment procedures and best practices
- Offering practical exercises step-by-step solutions available

Recommendations: The world needs a book like this. The authors convey not only the nuts-and-bolts of how Apple's tools work but also the philosophy behind the tools. This is essential reading for anyone coming to the Apple world from other platforms. We do things differently over here and understanding the philosophy is every bit as important - perhaps more so - than knowing which buttons to press. I commend this book to anyone starting or modernising an Apple deployment. Fraser Speirs Head of Computing and IT Cedars School of Excellence, Greenock, Scotland

Those who have made the switch from a Windows PC to a Mac have made *Switching to the Mac: The Missing Manual* a runaway bestseller. The latest edition of this guide delivers what Apple doesn't—everything you need to know to successfully and painlessly move your files and adapt to Mac's way of doing things. Written with wit and objectivity by *Missing Manual* series creator and bestselling author David Pogue, this book will have you up and running on your new Mac in no time.

Over the last few years, our photos and devices have advanced. Digital cameras and other devices alike allow us to capture thousands upon thousands of high-quality images; images that we have been cramming into external hard drives and SD cards. In the phone world, the iPhone is quite possibly the best camera most of us have with us most of the time. The iPhone can help you capture some of the most precious moments you'll ever have given the iSight camera optics, an amazing image signal processor, and the full power of the App Store behind it,. And let's be honest, the power to edit and recreate your pictures has become a necessity, even to the average person. However, the task of storing and managing photos is quite burdensome. If you are an "i" fan, then you probably have heard about the OS X Yosemite operating system which features the Photos for OS X software.

The 20th International Workshop on Combinatorial Algorithms was held during June 28 – July 2, 2009 in the picturesque castle of Hradec nad Moravicí, located in the north-east corner of the Czech Republic. IWOCA — the workshop that originated 19 years ago as AWOCA— made a big step towards globalization this year. After 19 conferences held in Australia, Indonesia, Korea, and Japan, the 20th anniversary was celebrated by taking the conference outside the Australasian region for the first time. Another novelty this year was that the proceedings are being published by Springer in the LNCS series. Our Call for Papers brought an overwhelming response of the combinatorial community. IWOCA 2009 received over 100 submissions, more than twice the amount it received before. Most of the submissions were of exceptionally high quality and thus the Program Committee was faced with hard work and so- times hard decisions. Many very good papers had to be rejected because of the limited capacity of the conference schedule. In the end, 41 contributed talks were presented during the conference — the maximum number that we could fit in the program. We would like to thank all who sent their submissions and to congratulate all the authors of the accepted papers. They contributed to what was a most successful conference. We also thank all the authors who submitted posters for the poster session (not included in the proceedings).
