The fifth edition of Romer's Advanced Macroeconomics continues its tradition as the standard text and the starting point for graduate macroeconomics courses and helps lay the groundwork for students to begin doing research in macroeconomics and monetary economics. Romer presents the major theories concerning the central questions of macroeconomics. The theoretical analysis is supplemented by examples of relevant empirical work, illustrating the ways that theories can be applied and tested. In areas ranging from economic growth and short-run fluctuations to the natural rate of unemployment and monetary policy, formal models are used to present and analyze key ideas and issues. The book has been extensively revised to incorporate important new topics and new research, eliminate inessential material, and further improve the presentation.

Developed in the classroom by two of the most prominent researchers in the field, Feenstra and Taylor's International Economics is a modern textbook for a modern audience, connecting theory to empirical evidence and expanding beyond the traditional focus on advanced companies to cover emerging markets and developing economies. International Trade is a split volume from the text, covering:

- Offshoring of goods and services (Chapter 6)
- Tariffs and quotas under imperfect competition (Chapter 9)
- International agreements on trade, labor, and the environment (Chapter 11)

As well as core topics:

- The Ricardian model (Chapter 2)
- The specific-factors model (Chapter 3)
- The Heckscher-Ohlin model (Chapter 4)
- Trade with increasing returns to scale and imperfect competition (Chapter 6)
- Import tariffs and quotas under perfect competition (Chapter 8)
- Export subsidies

The health of scientific enterprise has become a critical political and social issue as nation states tackle austerity, diversity, global challenges, whilst simultaneously supporting a competitive and innovative national economy. A key asset in achieving such ambitions is for a scholarly information system which enables the fruits of the research effort to be disseminated efficiently. As the information support system struggles with adapting from a print-based to a digital process, the dysfunctionality current within STEM publishing in particular becomes evident. New ways of supporting research are emerging which require a new approach to publishing, an approach which takes on board the many demographic, social, technical and administrative changes taking place in both science itself and society. A radical strategic assessment is required and this book tracks key aspects required for any new future strategy. This book provides a catalogue of issues to which a future STEM information industry will need to adapt. They range from the effects of technology on the neurological processes of research to the growing use of technology to speed up the exchange of information among groups and laboratories; from considerations about quality control yet maintaining intellectual ownership; from changing from an elitist STEM system favouring academics to a more democratic process with wider appeal. There is the neglected non-academic market and its need to share in the results of the research effort, often through partnership and being part of a 'hive mind'. This is the large world of the unaffiliated knowledge workers, of which academia is numerically but a small part. The many changes taking place in scholarly information dictate that the future is unlikely to be a smooth and gradual evolution from the past. Radical new approaches are required, a revolution which takes on board the perfect storm

of changes listed in this book. Just as such changes have changed the face of industries such as music and retail in recent years, so similar dramatic changes are likely to result in a restructuring of STEM into a more technologically-focused industry within the next decade. The implications for the current STEM stakeholders are profound.

Sixteen countries across the world — including the United States and many European nations — have fallen into economic crises since the late 1990s. In *The Limits of Fiscal, Monetary, and Trade Policies: International Comparisons and Solutions*, Jonathan E Lightner convincingly argues that the fundamental cause of the global malaise is a surplus of savings. He provides compelling evidence (via statistical estimates) that fiscal, monetary, and trade policies cannot solve the resulting problems since their effectiveness has plummeted. Lightner also shows that the solution to the current global economic woes is a “consumption driven growth model” (which China advocates but has yet to fully implement) because when there is insufficient consumption, excess savings will remain idle, seek a return from rent or deception, or fund speculative bubbles.

This book offers practical instruction on the use of audit studies in the social sciences. It features essays from sociologists, economists, and other experts who have employed this powerful and flexible tool. Readers will learn how to implement an audit study to examine a variety of questions in their own research. The essays first discuss situations where audit studies are the most effective. These tools allow researchers to make strong causal claims and explore questions that are often difficult to answer with observational data. Audit studies also stand as the single best way to conduct research on discrimination. The authors highlight what these studies have uncovered about labor market processes in the past decade. The next section gives

some guidance on how to design an audit study. The essays cover the difficult task of getting a study through an institutional review board, the technical setup of matching procedures, and statistical power and analysis techniques. The last part focuses on more advanced aspects. Coverage includes understanding context, what variables may signal, and the use of technology. The book concludes with a discussion of challenges and limitations with an eye towards the future of audit studies. “Field experiments studying and testing for housing and labor market discrimination have, rightly, become the dominant mode of discrimination-related research in economics and sociology. This book brings together a number of interesting and useful perspectives on these field experiments. Many different kinds of readers will find it valuable, ranging from those interested in getting an overview of the evidence, to researchers looking for guidance on the nuts and bolts of conducting these complex experiments.” David Neumark, Chancellor’s Professor of Economics at the University of California – Irvine “For decades, researchers have used experimental audit studies to uncover discrimination in a variety of markets. Although this approach has become more popular in recent years, few publications provide detailed information on the design and implementation of the method. This volume provides the first deep examination of the audit method, with details on the practical, political, analytical, and theoretical considerations of this research. Social scientists interested in consuming or contributing to this literature will find this volume immensely useful.” Devah Pager, Professor of Sociology and Public Policy at Harvard University

Economics becomes more complex due to the conjuncture of several economic, social, demographic and political factors operating both at the national and international spheres. Organized in five parts, this book captures all the recent developments in International Trade Theory in a simple, concise manner. The book provides a thorough review and analysis of the international trade and business environment, and helps students to apply this knowledge to practical aspects of doing business in international markets. A rigorous approach is used to provide students with a good understanding of the complex nature of international trade and business activities. It emphasizes the economic, geographical, and political factors that make international business significantly different from domestic business activities. The book is primarily intended as a textbook for undergraduate and post-graduate students of economics, commerce and management for their courses on international trade, foreign trade and international economics. Key Features This book helps students to

- Understand the fundamental determinants of the balance of payments and exchange rates
- Identify and analyse different theoretical models of international economics in light of 'real world' situations
- Learn multidimensional perspective of the goals, operations and consequences of different trade policies
- Gain an understanding of basic economic framework to analyze inter-national economic policies

International migration is high on the public and political agenda of many countries, as the movement of people raises concerns while often eluding states' attempts at regulation. In this context, the 'Migration Without Borders' scenario challenges conventional views on the need to control and restrict migration flows and brings a fresh perspective to contemporary debates. This book explores the analytical issues raised by 'open borders', in terms of ethics, human

rights, economic development, politics, social cohesion and welfare, and provides in-depth empirical investigations of how free movement is addressed and governed in Europe, Africa, the Americas and Asia. By introducing and discussing the possibility of a right to mobility, it calls for an opening, not only of national borders, but also of the eyes and minds of all those interested in the future of international migration in a globalising world.

Rev. ed. of: International economics: theory and policy / Paul Krugman, Maurice Obstfeld. 8th ed.

This book draws together the most authoritative articles on development economics published in the past few years, is aimed at undergraduate level and is suitable for students with little or no background in economics. The main themes include poverty, foreign aid, agriculture and human capital and amongst those whose work appears can be counted Amartya Sen, Jeffrey Sachs, Jagdish Bhagwati, Joseph Stiglitz, Paul Romer, Dani Rodrik, William Easterly, Robert Barro, Kenneth Arrow, Hernando de Soto, Daron Acemoglu, Muhammad Yunus, Anne Krueger, Abhijit Banerjee, Esther Duflo, Michael Kremer and Martin Feldstein. The reader focuses on the most recent and up-to-date contributions to the field of development economics. Instead of collecting "classic" contributions which are already available through many sources the articles chosen reflect recent developments in the discipline (for instance, in the area of geography and development) and include contributions that address recent events (the dramatic resurgence of a debt relief movement). "The Development Economics Reader" should be an invaluable resource for all students of the discipline. Since 1991, the eyes of the world have been on the economic growth and development of the states that formerly made up the Soviet Union. collection analyses why Belarus is considered ahead of many of its neighbour states in terms of human development. The single market and trade policy are Europe's major economic achievements and its best assets in times of increasing globalisation. European integration, as well as any other regional integration, is impossible without these two policies, which are a good example of how to implement a positive form of globalisation. They represent an engine for growth and building a more competitive EU economy. The single market and trade policy, by allowing people, goods, services and capital to move more freely through both Member States and the world, open up new opportunities for citizens, workers, businesses and consumers, creating the jobs and growth Europe so urgently needs. This collection of essays addresses the various facets of these two pillars of European integration. A more efficient single market creates the conditions for a more open trade policy, and vice-versa. Growth has been lacking in Europe in recent years, and enhancing these two assets is the most fruitful way to find it again.

This book traces the history of macroeconomics, the evolution of macroeconomic thought, and the resulting theory and policy. The book places the various macroeconomic theories in the order in which they developed chronologically, and illustrates the similarities and differences of the models.

Starting with classical economics and the Keynesian revolution, this book explores the macroeconomic theory after Keynes, open economy macroeconomics, economic policy, and sectoral functions. Financial officers and professionals making pecuniary decisions and analyses.

The Industrial Revolution, powered by oil and other fossil fuels, is spiraling into a dangerous endgame.

The price of gas and food are climbing, unemployment remains high, the housing market has tanked, consumer and government debt is soaring, and the recovery is slowing. Facing the prospect of a second collapse of the global economy, humanity is desperate for a sustainable economic game plan to take us into the future. Here, Jeremy Rifkin explores how Internet technology and renewable energy are merging to create a powerful "Third Industrial Revolution." He asks us to imagine hundreds of millions of people producing their own green energy in their homes, offices, and factories, and sharing it with each other in an "energy internet," just like we now create and share information online.

Rifkin describes how the five-pillars of the Third Industrial Revolution will create thousands of businesses, millions of jobs, and usher in a fundamental reordering of human relationships, from hierarchical to lateral power, that will impact the way we conduct commerce, govern society, educate our children, and engage in civic life. Rifkin's vision is already gaining traction in the international community. The European Union Parliament has issued a formal declaration calling for its implementation, and other nations in Asia, Africa, and the Americas, are quickly preparing their own initiatives for transitioning into the new economic paradigm. The Third Industrial Revolution is an insider's account of the next great economic era, including a look into the personalities and players — heads of state, global CEOs, social entrepreneurs, and NGOs — who are pioneering its implementation around the world.

This book focuses on the tremendous shift in both economic growth and development progress taking place towards the Asia-Pacific Region. Each of the countries in the region has various concerns and challenges for its sustainable development, a common goal most of them are trying to achieve at the moment. Interestingly, sustainable development in the region may be critical for achieving sustainable development at the global level as well. With a limited mandate, the book covers some specific developmental issues of 'the hot spots' of APR that are regarded to be contributing to their sustainable development. The book also looks at the formation and strengthening of some economic and financial initiatives with the potentials to affect growth and influence economic cooperation and integration of the countries in the region.

This volume documents the links among trade, colonialism, and forms of representation. Examining trade in commodities as diverse as illicit drugs, liquor, bananas, disease, tourism, adventure fiction, and modern aboriginal art, as well as cultural exchanges in politics, medicine, and literature, the contributors contest the view of trade as an equaliser of cultures, places, and peoples promoted by some modern economists, demonstrating instead the ways in which commerce has created and exacerbated differences of power.
