A fascinating account of the only airworthy Hawker Hurricane, “now regarded as the most historic British aircraft to survive in flying condition from WW2” (FLYER). In 1982 when he was traveling in India, Peter Vacher stumbled on the remains of a British plane—a Hurricane Mark I, a veteran of the Battle of Britain. It was in a dreadful state. Could he restore it? Would it fly again? Not until 14 years later did he decide to act and after six years of wrangling he got the icon home. Then the truly difficult process of restoration began—a worldwide search for parts, careful reconstruction, flight testing—until in 2005 it flew again to the delight of thousands of enthusiasts. Along the way Peter reunited three auspicious veterans—Peter Thompson, Bunny Curren, and Bob Foster—with R4118, men who had flown her during the war. To this day, the aircraft’s grace and splendor in flight is enjoyed by crowds across the UK. “The amazing story of how this only surviving Hurricane from the Battle of Britain was discovered and lovingly restored.” —The Mail on Sunday

Throughout history and in every geographical location, the rise and fall of industry, which impact the fate of large populations, are tied to the development and cultural entanglement of particular models that are articulated with political power. Models are

understood as knowledge devices – expert, theoretical, practical and commonsense – that are embedded in cultural and social environments and designed through struggles at various scales. This book results from the collaboration of an interdisciplinary team bringing together specialists in anthropology, geography, sociology, economics, political science, mathematics and engineering around the theme of ‘Models and their Effects on Development Paths’. Based on empirical research conducted on the heavy industries, *Industry and Work in Contemporary Capitalism* addresses how models that inform the organization of work and production and are created by powerful actors may diverge from, overlap with, or contradict the models articulated by less powerful actors on the ground, and how they are connected across material and cultural spaces. Careful observation of industrial work and production as they unfold in and across specific localities and affects people’s livelihoods is complemented by analysis of how models circulate, through which channels of power, which institutional entities, which political connections. This volume explores an extensive theoretical terrain and a number of empirical cases that show, from different perspectives, how ideas about the economy, about work and industry, materialize in specific practices and interventions that affect people’s livelihoods.

The little-known true story of a mysterious nuclear reactor disaster—years before Three Mile Island, Chernobyl, or Fukushima. Before the Three Mile Island incident or the Chernobyl disaster, the world’s first nuclear reactor meltdown to claim lives happened on US soil.

Chronicled here for the first time is the strange tale of SL-1, an experimental military reactor located in Idaho’s Lost River Desert that exploded on the night of January 3, 1961, killing the three crewmembers on duty. Through exclusive interviews with the victims’ families and friends, firsthand accounts from rescue workers and nuclear industry insiders, and extensive research into official documents, journalist William McKeown probes the many questions surrounding this devastating blast that have gone unanswered for decades. From reports of faulty design and mismanagement to incompetent personnel and even rumors of sabotage after a failed love affair, these plausible explanations raise startling new questions about

whether the truth was deliberately suppressed to protect the nuclear energy industry. Get the only official guide to the GRE® General Test that comes straight from the test makers!
