50 Jahre form – die führende europäische Design Zeitschrift Die internationale Design-Zeitschrift form feiert in diesem Jahr ihren 50. Geburtstag. Schon damals, 1957, als die Gestalter Jupp Ernst, Wilhelm Wagenfeld und andere das Magazin gründeten, war das ein ehrgeiziges und zukunftsweisendes Unternehmen. Ein Anspruch, dem sich die Redaktion heute mehr denn je verpflichtet fühlt. Der Design-Prozess steht jetzt im Mittelpunkt jeder Ausgabe. Kompetente Autoren stellen die Entstehung von außergewöhnlichen Produkten und visuellen Projekten vor – ebenso praxisnah wie fundiert. Klar strukturiert und zeitgemäß gestaltet, bietet form wertvolle Informationen zu Materialien und Produktionstechniken, Tipps für den beruflichen Alltag und ausführliche Titelgeschichten zu den aktuellen Tendenzen im Produkt- und Grafik-Design. Die Fachzeitschrift form erscheint zweimonatlich in Deutsch und Englisch. Wer im Design arbeitet, wer Design lehrt oder studiert, liest form.

Neuromorphic Systems Engineering: Neural Networks in Silicon emphasizes three important aspects of this exciting new research field. The term neuromorphic expresses relations to computational models found in biological neural systems, which are used as inspiration for building large electronic systems in silicon. By adequate engineering, these silicon systems are made useful to mankind. Neuromorphic Systems Engineering: Neural Networks in Silicon provides the reader with a snapshot of neuromorphic engineering today. It is organized into five parts viewing state-of-the-art developments within neuromorphic engineering from different perspectives. Neuromorphic Systems Engineering: Neural Networks in Silicon provides the first collection of neuromorphic systems descriptions with firm foundations in silicon. Topics presented include: large scale analog systems in silicon neuromorphic silicon auditory (ear) and vision (eye) systems in silicon learning and adaptation in silicon merging biology and technology micropower analog circuit design analog memory analog interchipcommunication on digital buses £/LIST£ Neuromorphic Systems Engineering: Neural Networks in Silicon serves as an excellent resource for scientists, researchers and engineers in this emerging field, and may also be used as a text for advanced courses on the subject.

The school sports festival is coming up, and Toma accepts the position of class 3-A's cheer squad captain on the condition that Futaba and Taichi serve as his vice-captains. Hoping to live up to Toma's faith in them, Taichi and Futaba diligently practice their squad's routine. But when the time comes to perform, Futaba hits a wall that threatens her very participation! -- VIZ Media

Cybernetics plays a significant role in coping with an aging society using state-of-the-art technologies from engineering, clinical medicine and humanities. This new interdisciplinary field studies technologies that enhance, strengthen, and support physical and cognitive functions of human beings, based on the fusion of human, machine, and information systems. The design of a seamless interface for interaction between the interior and exterior of the human body is described in this book from diverse aspects such as the physical, neurophysiological, and cognitive levels. It is the first book to cover the many aspects of cybernetics, allowing readers to understand the life support robotics technology for the elderly, including remote, in-home, hospital, institutional, community medical welfare, and vital-sensing systems. Serving as a valuable resource, this volume will interest not only graduate students, scientists, and engineers but also newcomers to the field of cybernetics.

Ten years from today, the center of our digital lives will no longer be the smart phone, but device that looks like ordinary eyeglasses: except those glasses will have settings for Virtual and Augmented Reality. What you really see and what is computer generated will be mixed so tightly together, that we won't really be able to tell what is real and what is illusion. Instead of touching and sliding on a mobile phone, we will make things happen by moving our eyes or by brainwaves. When we talk with someone or play an online game, we will see that person in the same room with us. We will be able to touch and feel her or him through haptic technology. We won't need to search online with words, because there will be a new Visual Web 100 times larger than the current Internet, and we will find things by images, buy things by brands, or just by looking at a logo on the jacket of a passerby. Language will be irrelevant, and a merchant in a developing world will have access to global markets. Medical devices will cure schizophrenia, allow quadriplegics to walk. People will be able to touch and feel objects and other people who are not actually there for conversations, games and perhaps intimate experiences. From Kindergarten to on-the-job, learning will become experiential. Children will visit great battlefields and tour historic places in VR rather than read about them in text books. Med students and surgeons will learn and practice on virtual humans rather than cadavers; oil rig workers will understand how to handle emergencies, before the ever leave the home office. The Fourth Transformation is based on two years of research and about 400 interviews with technologists and business decision makers. It explains the technology and product landscape on a level designed to be interesting and useful to business thinkers and general audiences. Mostly it talks about how VR and AR are already being used, or will be used in the next one-to-three years. It explains how this massive and fundamental transformation will be driven, nit just by Millennials, but by the generation following them, which the authors have named the Minecraft Generation. Robert Scoble and Shel Israel have written this book in the hope that it will serve as a business thinker's guidebook to the near-term future. They hope readers will walk away understanding the massive changes

rapidly arising, so that they will navigate a successful course through the changes they will be facing sooner than they-or their competitors-- may realize just yet.

Focusing on command specifications, functions and widgets, this manual describes the interface for the User Environment portion of OSF's Application Environment. It defines the AES and explains the rationale for the inclusion and specification of interfaces. Alphabetically arranged reference pages are provided for each AES/UE interface, along with tables of system services and their respective support levels. This revision corresponds to Release 1.2.

Into the shadows is a children's illustrated book that takes you into a dark and playful world. This book is meant to be enjoyed by all ages, young and old. Sometimes you have to look into the darkness to find the light. By showing a world in silhouettes, anyone can identify with the characters. Some of the inspiration comes from Dr. Seuss, Shel Silverstein and Tim Burton.

An introduction to linear time playing. The first section contains basic exercises for linear playing skills: voice coordination, dynamic balance, accenting, and more. The second section deals with the development of time feels in the linear style, including 4/4, half-time, shuffle, and odd

meter feels.

This powerful drama examines the fears of parents driven to do "the right thing" when the safety of their daughter is in doubt. A mother and father who learn that the next door neighbor is a convicted child molester consider both vigilance and vigilantism before being forced into action by a pair of child advocacy crusaders. The shocking climax hits a raw nerve, leaving the audience to consider where the line between right and wrong lies. Mr. Bundy was a hit at the 1998 Humana Festival at Actors Theatre of Louisville. -- Publisher's website.

International Freight Transport presents the key changes and issues in the fast-moving industries of trade and transport. It includes regional trade groupings, emergence of new large economies (i.e. BRIC countries), and pivotal regions such as the Middle East and Central America where major projects, such as new and widened canals, are underway or planned. These changes could redraw the trade map with major implications for transport patterns and solutions. Blending geography, economics, politics and trade, International Freight Transport provides insight into a wide range of topics, including: globalisation; demand versus supply; buyers and sellers; transport regulation, geography, modes and methods; transport ownership; alliances; and safety and security. The book is the only comprehensive and accessible book on international transport available.

In 2006, co-authors Robert Scoble and Shel Israel wrote *Naked Conversations*, a book that persuaded businesses to embrace what we now call social media. Six years later they have teamed up again to report that social media is but one of five converging forces that promise to change virtually every aspect of our lives. You know these other forces already: mobile, data, sensors and location-based technology. Combined with social media they form a new generation of personalized technology that knows us better than our closest friends. Armed with that knowledge our personal devices can anticipate what we'll need next and serve us better than a butler or an executive assistant. The resulting convergent superforce is so powerful that it is ushering in a era the authors call the Age of Context. In this new era, our devices know when to wake us up early because it snowed last night; they contact the people we are supposed to meet with to warn them we're running late. They even find content worth watching on television. They also promise to cure cancer and make it harder for terrorists to do their damage. Astoundingly, in the coming age you may only receive ads you want to see. Scoble and Israel have spent more than a year researching this book. They report what they have learned from interviewing more than a hundred pioneers of the new technology and by examining hundreds of contextual products. What does it all mean? How will it change society in the future? The authors are unabashed tech enthusiasts, but as they write, an elephant sits in the living room of our book and it is called privacy. We are entering a time when our technology serves us best because it watches us; collecting data on what we do, who we speak with, what we look at. There is no doubt about it: Big Data is watching you. The time to lament the loss of privacy is over. The authors argue that the time is right to demand options that enable people to reclaim some portions of that privacy.
