We live near the edge—whether in a settlement at the core of the Rockies, a gated community tucked into the wilds of the Santa Monica Mountains, a silicon culture emerging in the suburbs, or, in the future, homesteading on a terraformed Mars. In *Imagined Frontiers*, urban historian and popular culture scholar Carl Abbott looks at the work of American artists who have used novels, film, television, maps, and occasionally even performance art to explore these frontiers—the metropolitan frontier of suburban development, the classic continental frontier of American settlement, and the yet unrealized frontiers beyond Earth. Focusing on writers and artists working during the past half-century, an era of global economic and social reach, Abbott describes the dialogue between historians and social scientists seeking to understand these frontier places and the artists reimagining them in written and visual fictions. This book offers perspectives on such well-known authors as T. C. Boyle and John Updike and on such familiar movies and television shows as *Falling Down* and *The Sopranos*. By putting *The Rockford Files* and the cult favorite *Firefly* in conversation with popular fiction writers Robert Heinlein and Stephen King and literary novelists Peter Matthiessen and Leslie Marmon Silko, Abbott interweaves the disparate subjects of western history, urban planning, and science fiction in a single volume. Abbott combines all-new essays with others previously

published but substantially revised to integrate western and urban history, literary analysis, and American studies scholarship in a uniquely compelling analysis of the frontier in popular culture.

provides both a theoretical and practical guide to brands, placing emphasis on the theory that the consumer is a co-creator in a brand's identity. In a world in which social media and inclusive digital platforms have increased customer engagement, the role of brands and branding has changed. The line between the producer and the consumer has become blurred; consumers are no longer the recipients of brand identity, but the co-creators, playing a significant role in shaping new products and systems. Case studies include the Canterbury Crusaders, KVD Beauty, Kodak, Yamaha, Ottobock and Holland's rebrand as The Netherlands.

millionaire from New Orleans, Louisiana, who was “assumed to be White.” Frank loved Pearl and promised that they could be together for life. Pearl, on the other hand misinterprets his meaning, “be together for life.” Through situational denial, she refused to acknowledge the miscegenation law, and was relentless in her demand for Frank to marry her. Frank Boudine’s mother Dr. Darlin Boudine, who was “passing,” hated Pearl because she was Negro and her son dared to love her. Without Frank’s genuine approval, Dr. Darlin Boudine arranged his marriage to a wealthy White socialite. This extraordinary book explains the engine that has catapulted the Internet from backwater to ubiquity—and reveals that it is sputtering precisely because of its runaway success. With the unwitting help of its users, the generative Internet is on a path to a lockdown, ending its cycle of innovation—and facilitating unsettling new kinds of control. iPods, iPhones, Xboxes, and TiVos represent the first wave of Internet-centered products that can't be easily modified by anyone except their vendors or selected partners. These “tethered appliances” have already been used in remarkable but little-known ways: car

GPS systems have been reconfigured at the demand of law enforcement to eavesdrop on the occupants at all times, and digital video recorders have been ordered to self-destruct thanks to a lawsuit against the manufacturer thousands of miles away. New Web 2.0 platforms like Google mash-ups and Facebook are rightly touted—but their applications can be similarly monitored and eliminated from a central source. As tethered appliances and applications eclipse the PC, the very nature of the Internet—its “generativity,” or innovative character—is at risk. The Internet's current trajectory is one of lost opportunity. Its salvation, Zittrain argues, lies in the hands of its millions of users. Drawing on generative technologies like Wikipedia that have so far survived their own successes, this book shows how to develop new technologies and social structures that allow users to work creatively and collaboratively, participate in solutions, and become true “netizens.”
