Over 5,300 total pages .... MARINE RECON Reconnaissance units are the commander's eyes and ears on the battlefield. They are task organized as a highly trained six man team capable of conducting specific missions behind enemy lines. Employed as part of the Marine Air-Ground Task Force,

reconnaissance teams provide timely information to the supported commander to shape and influence the battlefield. The varying types of missions a Reconnaissance team conduct depends on how deep in the battle space they are operating. Division Reconnaissance units support the close and distant battlespace, while Force Reconnaissance units conduct deep reconnaissance in support of a landing force. Common missions include, but are not limited to: Plan, coordinate, and conduct amphibious-ground reconnaissance and surveillance to observe, identify, and report enemy activity, and collect other information of military significance. Conduct specialized surveying to include: underwater reconnaissance and/or demolitions, beach permeability and topography, routes, bridges, structures, urban/rural areas, helicopter landing zones (LZ), parachute drop zones (DZ), aircraft forward operating sites, and mechanized reconnaissance missions. When properly task organized with other forces, equipment or personnel, assist in specialized engineer, radio, and other special reconnaissance missions. Infiltrate mission areas by necessary means to include: surface, subsurface and airborne operations. Conduct Initial Terminal Guidance (ITG) for helicopters, landing craft, parachutists, air-delivery, and re-supply. Designate and engage selected targets with organic weapons and force fires to support battlespace shaping. This includes designation and terminal guidance of

precision-guided munitions. Conduct post-strike reconnaissance to determine and report battle damage assessment on a specified target or area. Conduct limited scale raids and ambushes. The main purpose of this book is to act as a how-to reference manual for outfitting your RV or mobile home with the tools to support your working and life style and is written from the perspective of traveling full-time on the road. A secondary purpose is to supply information for persons to boondock where they wish and still have the electrical conveniences without having shore power. You will find topics on electrical systems, computers, solar energy and communications. Most all of the components referred to in the book are easily found at any computer retail store, hardware store and of course, on-line. You can save hundreds of dollars by installing your RV systems and have the pleasure and satisfaction of doing it yourself. The examples illustrated are a starting point to give you ideas on how to make changes to your RV. You will find detailed pictures, schematics and illustrations throughout the book to guide you along the way. There is also a reference section for finding the components you need and to further explore a topic. Included is a glossary of technical definitions for terms and abbreviations. For the more technically inclined, there are sections interspersed all

throughout the chapters that provide ancillary information on the topic being discussed. Go to these Sidebars to learn more about the technology or feature. For those that work on the road, replicating your home or work office into a mobile office in the past has been difficult and frustrating to achieve because you could not accomplish all the same features and functions that are required to perform your job. As time has progressed, technology and people's inventiveness have continued to progress and seems to be progressing in an increasing geometric fashion. Obviously, this is good news for the mobile worker or mobile entrepreneur. Today, as of the writing of this book, the technology is available to match the performance and functionally of a brick and mortar establishment.
