Sharing our stories, who we are, what we love, how we feel, why we fear, connects us to one another. Weaving moments of grace with spiritual practices that have grounded her through life's challenges, Laurie Blefeld invites the reader into her sacramental stories. You will find yourself in Laurie's stories and reclaim bits and pieces of your own. "Our days are a stream of moments - some devastating, some down to earth and some filled with ineffable meaning. Laurie Blefeld has written a book full of tender moments that warm the heart and remind us to be grateful for and conscious of how laced with grace our lives really are. This is a book to enjoy and treasure."-Gunilla Norris, author of Sheltered in the Heart and Companions on the Way: A Little Book of Heart-full Practices "Laurie's transformational stories, told in her authentic and lyrical voice, are evocative of the highs and lows in everyone's life. Laurie's generous prose connects us to her family's living history - and through it to our own. She is a natural spiritual teacher. World Development Report 1994 examines the link between infrastructure and development and explores ways in which developing countries can improve both the provision and the quality of infrastructure services. In recent decades, developing countries have made substantial investments in infrastructure, achieving dramatic gains for households and producers by expanding their access to services such as safe water, sanitation, electric power, telecommunications, and transport. Even more infrastructure investment and expansion are needed in order to extend the reach of services - especially to people living in rural areas and to the poor. But as this report shows, the quantity of investment cannot be the exclusive focus of policy. Improving the quality of infrastructure service also is vital. Both quantity and quality improvements are essential to modernize and diversify production, help countries compete internationally, and accommodate rapid urbanization. The report identifies the basic cause of poor past performance as inadequate institutional incentives for improving the provision of infrastructure. To promote more efficient and responsive service delivery, incentives need to be changed through commercial management, competition, and user involvement. Several trends are helping to improve the performance of infrastructure. First, innovation in technology and in the regulatory management of markets makes more diversity possible in the supply of services. Second, an evaluation of the role of government is leading to a shift from direct government provision of services to increasing private sector provision and recent experience in many countries with public-private partnerships is highlighting new ways to increase efficiency and expand services. Third, increased concern about social and environmental sustainability has heightened public interest in infrastructure design and performance.

A scathing attack on Wall Street's illegal ties to Nazi Germany before WWII—and the postwar whitewashing of Nazi business leaders by the US government Prior to World War II, German industry was controlled by an elite group who had used their money and influence to help bring the Nazi Party to power. After the Allies had successfully occupied Germany and removed the Third Reich, the process of reconstructing the devastated nation's economy began under supervision of the US government. James Stewart Martin, who had assisted the Allied forces in targeting key areas of German industry for aerial bombardment, returned to Germany as the director of the Division for Investigation of Cartels and External Assets in American Military Government, a position he held until 1947. Martin was to break up the industrial machine these cartels controlled and investigate their ties to Wall Street. What he discovered was shocking. Many American corporations had done business with German corporations who helped fund the Nazi Party, despite knowing what their money was supporting. Effectively, Wall Street's greed had led them to aid Hitler and hinder the Allied effort. Martin's efforts at decartelization were unsuccessful though, largely due to hindrance from his superior officer, an investment banker in peacetime. In conclusion, he said, "We had not been stopped in Germany by German business. We had been stopped in Germany by American business." This exposé on economic warfare, Wall Street, and America's military industrial complex includes a new introduction by Christopher Simpson, author of Blowback: America's Recruitment of Nazis and Its Destructive Impact on Our Domestic and Foreign Policy, and a new foreword from investigative journalist Hank Albarelli.

After an overview of major scientific discoveries of the 18th and 19th centuries, which created electrical science as we know and understand it and led to its useful applications in energy conversion, transmission, manufacturing industry and communications, this Circuits and Systems History book fills a gap in published literature by providing a record of the many outstanding scientists, mathematicians and engineers who laid the foundations of Circuit Theory and Filter Design from the mid-20th Century. Additionally, the book records the history of the IEEE Circuits and Systems Society from its origins as the small Circuit Theory Group of the Institute of Radio Engineers (IRE), which merged with the American Institute of Electrical Engineers (AIEE) to form IEEE in 1963, to the large and broad-coverage worldwide IEEE Society which it is today. Many authors from many countries contributed to the creation of this book, working to a very tight time-schedule. The result is a substantial contribution to their enthusiasm and expertise which it is hoped that readers will find both interesting and useful. It is sure that in such a book omissions will be found and in the space and time available, much valuable material had to be left out. It is hoped that this book will stimulate an interest in the marvellous heritage and contributions that have come from the many outstanding people who worked in the Circuits and Systems area.

Major progress has been made in the field of driveshafts since the authors presented their first edition of this unique reference work. Correspondingly, major revisions have been done for second edition of the German Textbook (Springer 2003), which is present here in the English translation. The presentation was adjusted, novel improvements of manufacturing and design are described, and modern aspects of production are incorporated. The design and application of Hooke's joint driveshafts is discussed as well as constant velocity joints for the construction of agricultural engines, road and rail vehicles. This work can be used as a textbook as well as a reference for practitioners, scientists, and students dealing with drive technology.

In this manual are details of specifications, installation, the electrical connections, getting to know the machine, using the machine, energetic wash cycle, gentle wash cycle, looking after the machine, helpful hints for successful washing and servicing.

Carey's seminal work joins central issues in the field and redefines them. It will force the reader to think in new and fruitful ways about such dichotomies as transmissions vs. ritual, administrative vs. critical, positivist vs. marxist, and cultural vs. power-orientated approaches to communications study. An historically inspired treatment of major figures and theories, required reading for the sophisticated scholar' - George Gerbner, University of Pennsylvania ...offers a mural of thought with a rich background, highlighted by such thoughts as communication being the 'maintenance of society in time'. -

Cast/Communication Booknotes These essays encompass much more than a critique of an academic discipline. Carey's lively thought, lucid style, and profound scholarship propel the reader through a wide and varied intellectual landscape, particularly as these issues have affected Modern American thought. As entertaining as it is enlightening, Communication as Culture is certain to become a classic in its field.
