There's almost nothing in the modern home that can delight us more than an intelligently organized, nicely featured closet-a place where things are organized in pleasing geometry, here we can find and retrieve that perfect tie or that just-right sweater, instantly. And there's

nothing more disheartening and irritating than that murky closet from the netherworld, where boxes tumble down on our heads whenever the door opens, where the sheer clutter makes it impossible to identify what's inside, much less retrieve the item you need. Consumer desperation is why entire companies have sprung up devoted to closet organizing-it's the reason homeowners sometimes spend literally thousands of dollars to have a custom closet organizer designed and installed. Or, they can buy this book and do it themselves for a fraction of the cost. Today, virtually all the materials and hardware used by custom closet fabricators is available to consumers on the racks of home centers and hardware stores. *Build Your Own Custom Closet* is the first book to show consumers all the inside tips on designing a custom closet, and how to install it using materials they can buy themselves. This is the book that will lift readers from closet purgatory into the heaven of the well-organized closet-without selling their souls.

This title was first published in 2002: This field guide assesses two views of human error - the old view, in which human error becomes the cause of an incident or accident, or the new view, in which human error is merely a symptom of deeper trouble within the system. The two parts of this guide concentrate on each view, leading towards an appreciation of the new view, in which human error is the starting point of an investigation, rather than its conclusion. The second part of this guide focuses on the circumstances which unfold around people, which causes their assessments and actions to change accordingly. It shows how to "reverse engineer" human error, which, like any other component, needs to be put back together in a mishap investigation.
