Constipation in childhood is often dismissed as a mild and trivial problem. However, for those children who suffer with bowel dysfunction, the pain, shame, and despair associated with incontinence and painful defecation may have ramifications for a lifetime. Surprisingly, many health care providers are not well-informed about how to deal with childhood constipation. Little information is readily available to doctors and nurses confronted with this often perplexing problem. This book presents the scientific background, physiology, and clinical features of children who present with problems of defecation. It also contains a booklet designed to be copied and distributed to parents and children to help them understand this distressing condition. The book is designed to be an easily accessible source of information for practitioners and students of pediatrics, child psychiatry, and gastroenterology, as well as family physicians.

Today, being a health consumer encompasses more than being knowledgeable about traditional medicine and health practice but also includes the necessity to be well informed about the expanding field of complementary and alternative medicine. *Consumer Health and Integrative Medicine: Holistic View of Complementary and Alternative Medicine Practices, Second Edition* was written to expand upon the many alternative modalities that many other consumer health texts overlook. It includes chapters on the major alternative medicine systems and healing modalities, including Ayurvedic medicine, traditional Chinese medicine, naturopathy, homeopathic medicine, chiropractic medicine, massage, reflexology, and herbals or botanicals. The authors mission is to increase reader's knowledge base, not make up their mind, as we all make better choices related to our own personal health care practices when we are informed consumers. This updated third edition is a detailed reference for nurses and other health care providers who care for children with neurosurgical conditions. The explanations of pathophysiology, anatomy, neurodiagnostic imaging, and treatment options for each neurosurgical diagnosis will help to clarify the rationale behind the nursing care. Descriptions of presenting symptoms, history and findings on neurological examination will help nurses understand the neurological disorder and identify problems. New chapters have been added on skull and scalp anomalies, pediatric concussion, abuse head trauma and on neuroimaging. Each chapter includes case studies, impact on families, patient and family education, and practice pearls. Staff and student nurses working in clinics, critical care units, pediatric units, operating rooms, post-anesthesia care units, emergency departments, and radiology departments will benefit from the information presented. Although this book is written for nurses, child life therapists, physical and occupational therapists, medical students and neurosurgery residents will also find it helpful. Parents of children with neurosurgical disorders will also find it a useful resource in understanding their child's condition. Cathy C. Cartwright and Donna C. Wallace have been awarded third place in the 2017 American Journal of Nursing Book of the Year Awards in CHILD HEALTH category.

As the rates of chronic health conditions in childhood increase, school-based professionals regularly encounter children with chronic health conditions in the school setting. Students with chronic health conditions often require accommodations, assessment, intervention, and close collaboration with medical providers and families. However, most school-based clinicians (school psychologists, counselors, social workers) responsible for addressing the special needs of these children have no prior experience and have never taken coursework related to common pediatric conditions. *Pediatric Health Conditions in Schools* is a practical guide for school-based clinicians working with children with chronic health issues. Section I provides a broad overview of school-related issues for working with children with long-term health problems. This includes a review of common medical conditions and terminology and cross-cutting issues related to social, emotional, and academic functioning, as well as the role of the school-based professional in collaborating across systems of care. This section also reviews legal and policy issues, as well as alternative educational settings for students with chronic health needs. Section II focuses on prevention, assessment, intervention, and consultations strategies for both individual students and entire school systems. Finally, Section III includes chapters for common groups of medical conditions. Each chapter provides an overview of the condition(s), common school-related concerns, risk and protective factors and cultural considerations, and includes practical strategies, resources, and handouts for the school-based professional. Case examples are used throughout the book to illustrate key concepts and implications for the school setting.
