Many writers and artists have undertaken the difficult task of recreating the image of Lenin for their contemporaries and future generations. The Blue Notebook by the well-known Soviet author Emmanuil Kazakevich (1913-1962) has become one of the most popular books about Lenin. A notebook in a blue cover actually did exist. In it Lenin jotted down notes for his famous book State and Revolution which he worked on in the difficult days preceding the Great October Socialist Revolution. At the time Lenin was in hiding at Razliv Station, from where he directed the preparations for the armed uprising. "He was a passionate traveler, a hunter, a crack shot, a top-notch driver, the life of the party, witty and full of fun... Moreover, he was a truly courageous soldier." This portrait of Kazakevich was drawn by his contemporary and colleague, the writer Alexander Tvardovsky. During the Second World War Kazakevich, commander of a platoon, was asked to join the staff of the brigade newspaper. After working on the paper for a short while he asked to be transferred back to the front lines. "The front lines are important to me not only as a patriot, but as a writer," he said. Emmanuil Kazakevich was born in the Ukraine in 1913, the son of a teacher. His first book, a volume of poetry, was published in 1932. He translated the works of Pushkin, Lermontov, and Mayakovsky into Yiddish. Kazakevich's first prose work,

The Star, is a harsh, yet sensitive war story which gained him world fame. This was followed by Spring on the Oder, Heart of a Friend, Two in the Steppe, The House on the Square, By the Light of Day and The Blue Notebook, the author's last work. Kazakevich was twice awarded the State Prize for Literature.

1970s to the present day. It considers how these poets have come to contend with, and contribute to, narratives surrounding industrial disputes. Through these conversations, the book attempts to question the way in which union narratives and legacies are constructed, and to investigate the power dynamics that underpin the presentation of labour histories. The work of these poets helps us to understand how cultural memories have been formed, and makes it possible to see how these legacies may still be rewritten and reframed.

The nature and purpose of anthropology has been reassessed in recent years by third world, black and feminist scholars. A wide range of global perspectives are examined as well as the effects of technology and geo-political configurations. In *The Future of Anthropological Knowledge* the chapters explore the question of the nature of social knowledge from a variety of perspectives and locations including China, Africa, the USA and elsewhere. By examining the changing nature of anthropological knowledge and of the production of that knowledge, this book challenges the notion that only western societies have produced social theories of modernity and of global scope. Knowledge of society can no longer be restricted to a knowledge of face-to-face social relations but must encompass the effect of technology, global consumption patterns and changing geo-political configurations. *The Future of Anthropological Knowledge* will be of interest to anthropologists and students of culture and society.

The Floor Plan Manual Housing has for decades been a seminal work in the field of architecture. In its 5th, revised and expanded edition, approximately 160 international housing projects built after 1945 are documented and analyzed. The focus is on exemplary and transferrable projects, and on innovative and trendsetting concepts. The systematic representation of all projects allows the reader to compare and evaluate various floor plans – and to be inspired by the wealth of ideas and strategies for one's own design work. The introductory theoretical and historical essays have been newly written or updated, and offer a structured overview of the residential housing typology and its development. This new book is the first full account, inside or outside government, of China's efforts to acquire foreign technology. Based on primary sources and meticulously researched, the book lays bare China's efforts to prosper technologically through others' achievements. For decades, China has

operated an elaborate system to spot foreign technologies, acquire them by all conceivable means, and convert them into weapons and competitive goods—without compensating the owners. The director of the US National Security Agency recently called it "the greatest transfer of wealth in history." Written by two of America's leading government analysts and an expert on Chinese cyber networks, this book describes these transfer processes comprehensively and in detail, providing the breadth and depth missing in other works. Drawing upon previously unexploited Chinese language sources, the authors begin by placing the new research within historical context, before examining the People's Republic of China's policy support for economic espionage, clandestine technology transfers, theft through cyberspace and its impact on the future of the US. This book will be of much interest to students of Chinese politics, Asian security studies, US defence, US foreign policy and IR in general.
