Contributions in this book illustrate the many methods available for researching language in context and for the analysis of everyday text types. Each chapter highlights language as a resource for the expression of meanings—a social semiotic resource. Text analysis is used to reveal our capacity to formulate multiple meanings for participation in different social practices—in relationships, in work, in education and in leisure. The approach is applied in text-based teaching and in the critical analysis of public discourses. The texts come from different social spheres including banking, language classes, senate hearings, national tests and textbooks, and interior architecture. Text-based research makes a major contribution to Critical Discourse Analysis. The editors and authors of this book demonstrate the value of text analysis for awareness of the role of language for accountable citizenship and for teaching and learning. This book will be of interest to anyone researching in the fields of language learning and teaching, functional linguistics, multimodality, social semiotics, systemic functional linguistics, text-based teaching, and genre analysis, as well as literacy teachers and undergraduate

and postgraduate students of linguistics, media and education.

Grading is one of the most hotly debated topics in education, and grading practices themselves are largely based on tradition, instinct, or personal history or philosophy. But to be effective, grading policies and practices must be based on trustworthy research evidence. Enter this book: a review of 100-plus years of grading research that presents the broadest and most comprehensive summary of research on grading and reporting available to date, with clear takeaways for learning and teaching. Edited by Thomas R. Guskey and Susan M. Brookhart, this indispensable guide features thoughtful, thorough dives into the research from a distinguished team of scholars, geared to a broad range of stakeholders, including teachers, school leaders, policymakers, and researchers. Each chapter addresses a different area of grading research and describes how the major findings in that area might be leveraged to improve grading policy and practice. Ultimately, Guskey and Brookhart identify four themes emerging from the research that can guide these efforts: - Start with clear learning goals, - Focus on the feedback function of grades, - Limit the number of grade categories, and - Provide multiple grades that reflect product, process, and progress criteria. By distilling the vast body of research evidence into meaningful, actionable findings and strategies, this book is the jump-start all stakeholders need to build a better understanding of what works—and where to go from here.

African mosaic is a synthesis of 22 contributions by internationally acknowledged scholars that embrace a strikingly colourful range of themes of interest to Africanists. The contributions are innovative and consider topics from many different perspectives, including the preservation of the African heritage, alternative methodological approaches, experimentation with language change and methodologies, and perceptions on naming. The metaphor of a mosaic has been chosen to celebrate the lifelong, dedicated and diverse contribution to the field of African languages by Prof J A Louw, the subject of this Festschrift. Contributions come from the southern, central, eastern and western parts of Africa. They vary in content: from glimpses into the richness of orality, language structure, and some sound systems of the

languages of Africa, to the domain in which all these languages play a role and have particular relevance - society itself. Essential reading for all those interested in African language studies.

Formative assessment is one of the best ways to increase student learning and enhance teacher quality. But effective formative assessment is not part of most classrooms, largely because teachers misunderstand what it is and don't have the necessary skills to implement it. In the updated 2nd edition of this practical guide for school leaders, authors Connie M. Moss and Susan M. Brookhart define formative assessment as an active, continual process in which teachers and students work together—every day, every minute—to gather evidence of learning, always keeping in mind three guiding questions: Where am I going? Where am I now? What strategy or strategies can help me get to where I need to go? Chapters focus on the six interrelated elements of formative assessment: (1) shared learning targets and criteria for success, (2) feedback that feeds learning forward, (3) student self-assessment and peer assessment, (4) student goal setting, (5) strategic teacher questioning, and (6) student engagement in asking effective questions. Using specific examples based on their extensive work with teachers, the authors provide - Strategic talking points and conversation starters to address common misconceptions about formative assessment; - Practical classroom strategies to share with teachers that cultivate students as self-regulated, assessment-capable learners; - Ways to model the elements of formative assessment in conversations with teachers about their professional learning; - "What if" scenarios and advice for how to deal with them; and - Questions for reflection to gauge understanding and progress. As Moss and Brookhart emphasize, the goal is not to "do" formative assessment, but to embrace a major cultural change that moves away from teacher-led instruction to a partnership of intentional inquiry between student and teacher, with better teaching and learning as the outcome.

"We can't do that in our school district." "I don't have time to add that to my curriculum." "We're fighting against impossible odds with these students." Sound familiar? School improvement can often feel like a losing battle, but it doesn't have to be. In this fully revised and updated second edition of *The Learning Leader*, Douglas B. Reeves helps leadership teams go beyond excuses to capitalize on their strengths, reduce their weaknesses, and reset their mindset and priorities to achieve unprecedented success. A critical key is recognizing student achievement as more than just a set of test scores. Reeves asserts that when leaders focus exclusively on results, they fail to measure and understand the importance of their own actions. He offers an alternative—the Leadership for Learning Framework, which helps leaders identify and distinguish among four different types of educators and provide more effective, tailored support to - "Lucky" educators, who achieve high results but don't understand how their actions influence achievement. - "Losing" educators, who achieve low results yet keep doing the same thing, expecting different outcomes. - "Learning" educators,

who have not yet achieved the desired results but are working their way toward excellence. - "Leading" educators, who achieve high results and understand how their actions influence their success. Reeves stresses that effective leadership is neither a unitary skill nor a solitary activity. The Learning Leader helps leaders reconceptualize their roles in the school improvement process and motivate themselves and their colleagues to keep working to better serve their students.

Are you picking up all your students' work is trying to tell you? In this book, assessment expert Susan M. Brookhart and instructional coach Alice Oakley walk teachers through a better and more illuminating way to approach student work across grade levels and content areas. You'll learn to view students' assignments not as a verdict on right or wrong but as a window into what students "got" and how they are thinking about it. The insight you'll gain will help you * Infer what students are thinking, * Provide effective feedback, * Decide on next instructional moves, and * Grow as a professional. Brookhart and Oakley then guide teachers through the next steps: clarify learning goals, increase the quality of classroom assessments, deepen your content and pedagogical knowledge, study student work with colleagues, and involve students in the formative learning cycle. The book's many authentic examples of student work and teacher

insights, coaching tips, and reflection questions will help readers move from looking at student work for correctness to looking at student work as evidence of student thinking.

Assessment is an essential part of teaching and learning, but too often it leads to misleading conclusions—sometimes with dire consequences for students. How can educators improve assessment practices so that the results are accurate, meaningful, informative, and fair? Educator and best-selling author Myron Dueck draws from his firsthand experience and his work with districts around the world to provide a simple but profound answer: put student voice and choice at the center of the process. In this engaging and well-researched book, Dueck reveals troubling issues related to traditional approaches and offers numerous examples of educators at all levels who are transforming assessment by using tools and methods that engage and empower students. He also shares surprising revelations about the nature of memory and learning that speak to the need for rethinking how we measure student understanding and achievement. Readers will find sound advice and detailed guidance on how to

- * Share and cocreate precise learning targets,
- * Develop student-friendly rubrics linked to standards,
- * Involve students in ongoing assessment procedures,
- * Replace flawed grading systems with ones that better reflect what students know and can do, and
- * Design structures for students' self-reporting on their progress in learning.

Inspired by the origins of the word assessment—derived from the Latin for "to sit beside"—Dueck urges educators to discard old habits and instead work with students as partners in assessment. For those who do, the effort is rewarding and the benefits are significant
