Addresses the need for the United States to restructure the banking and financial system, anticipates the globalization of the crisis, and calls for international action.

In the first comprehensive and unflinching overview of the erotic initiation and sexual sorcery essential to the mysterious magical tradition known as the 'Left Hand Path', this complete guide covers an enormous array of taboo and previously forbidden practices. Penetrating the veil of secrecy and obscuring the ecstasies and dangers of a way of magic that can be a powerful instrument of psychic transmutation, this is a sometimes disturbing, always inspiring study of the shadow side of eros.

The Social Psychology of Female-Male Relations: A Critical Analysis of Central Concepts covers the thoughts, feelings, and behaviours of individuals in social interaction and explicitly considers women and men in relation to one another - as individuals, as representatives of social categories, and as significant social groups. Chapter One lays out the parameters of the social psychology of female-male relations. Chapter Two contains two major insights: that gender identity is a complex, multifaceted construct and that the structure and degree of differentiation of gender identity develop and change over the life course. Chapters Three and Four present a relatively general cognitive social-psychological framework for two important constructs, sex stereotypes and gender-related attitudes. Chapter Five offers a critique of analyses that explain the behavior of women and men in close, personal relationships in terms of sex differences in the individual dispositions of the participants. Chapter Six presents a strong and straightforward critique of the current usage of the term sex role to describe a global set of behavioral prescriptions that apply to all women and to all men. Chapter Seven presents a comprehensive review of research on gender-related patterns of behavior in task groups that cannot be found elsewhere. The concluding chapter summarizes points made in earlier chapters and offers a set of notes toward a theory of female-male relations. Social scientists (especially, psychologists, sociologists, and anthropologists) doing research on women, on men, or on women and men in relationships or in social interaction.

The American way of life pushes people to constantly strive for more--more money, more stuff, more clout. But how much is enough? And how do we know when we have too much of a good thing? In this provocative, paradigm-shifting book, Will Davis Jr. challenges readers to discover the peace that comes through contentment with what we have and compassion for those in need. Through surprising statistics, scriptural insight, and real-life stories, Davis gently leads readers to consider living with less in order to do more for the kingdom. Thought-provoking discussion questions and short chapters make this a perfect study for small groups. No one will come away from this powerful book unchanged.

This text teaches maths in a step-by-step fashion – ideal for students on first-year engineering and pre-degree courses. - Hundreds of examples and exercises, the majority set in an applied engineering context so that you immediately see the purpose of what you are learning - Introductory chapter revises indices, fractions, decimals, percentages and ratios - Fully worked solutions to every problem on the companion website at [www.palgrave.com/engineering/singh](http://www.palgrave.com/engineering/singh) plus searchable glossary, e-index, extra exercises, extra content and more!

Explores cases of people killed by trusted spouses, lovers, family members, or helpful strangers who turned on them, including the murder of Chuck Leonard, a middle school counselor who was an odd mix of family man and wild man. Transsexuals often believe that they were born as the wrong gender and are the victims of a terrible accident of nature. Now that medicine can change a person's gender, should the law also acknowledge that change?

Merlin Carothers' first book, *Prison to Praise*, drew acclaim from Pat and Shirley Boone, Jamie Buckingham, Leonard LeSourd, Catherine Marshall, Norman Vincent Peale, John Sherrill and others. Thousands wrote and hundreds telephoned to tell him of transformed lives...of experiencing new power and victory. Now *Power in Praise* brings together some of the miracles wrought by the simple application of Biblical truth: all things work together for good. *Power in Praise* is a simple clear explanation of how and why the principles introduced in *Prison to Praise* work in every-day life. Book jacket.

This lively, engaging introduction to the New Testament is critical yet faith-friendly, lavishly illustrated, and accompanied by a variety of pedagogical aids, including sidebars, maps, tables, charts, diagrams, and suggestions for further reading. The full-color interior features art from around the world that illustrates the New Testament's impact on history and culture. The first edition has been well received (over 60,000 copies sold). This new edition has been thoroughly revised in response to professor feedback and features an updated interior design. It offers expanded coverage of the New Testament world in a new chapter on Jewish backgrounds, features dozens of new works of fine art from around the world, and provides extensive new online material for students and professors available through Baker Academic's Textbook eSources.

This detailed look at the hospitality industry's dynamics uses an international perspective that provides reader understanding by spanning several strategic and functional areas in management practices. The contributors offer research-based perspectives on real-life issues in this competitive industry.

One of Canada's hippest, smartest cultural critics takes on the West's defining value. We live in a world increasingly dominated by the fake, the prepackaged, the artificial: fast food, scripted reality TV shows, Facebook "friends," and fraudulent memoirs. But people everywhere are demanding the exact opposite, heralding "authenticity" as the cure for

isolated individualism and shallow consumerism. Restaurants promote the authenticity of their cuisine, while condo developers promote authentic loft living and book reviewers regularly praise the authenticity of a new writer's voice. International bestselling author Andrew Potter brilliantly unpacks our modern obsession with authenticity. In this perceptive and thought-provoking blend of pop culture, history, and philosophy, he finds that far from serving as a refuge from modern living, the search for authenticity often creates the very problems it's meant to solve.

You understand the basic concepts of game design: gameplay, user interfaces, core mechanics, character design, and storytelling. Now you want to know how to apply them to the strategy game genre. This focused guide gives you exactly what you need. It walks you through the process of designing for the strategy game genre and shows you how to use the right techniques to create fun and challenging experiences for your players.

This comprehensive and illustrated reference work covers all aspects of growth plate fractures and their complications. It is based on the unique resources of the Mayo Clinic regarding patient follow-up. Following general reviews of growth plate fractures, 21 chapters deal with each epiphyseal growth plate in the body. All of these chapters are constructed similarly for easy and quick retrieval of the required information.

Ready to build apps for iPhone, iPad, and Mac now that Swift has landed? If you're an experienced programmer who's never touched Apple developer tools, this hands-on book shows you how to use the Swift language to make incredible iOS and OS X apps, using Cocoa and Cocoa Touch. Learn how to use Swift in a wide range of real-world situations, with Cocoa features such as Event Kit and Core Animation. You'll pick up Swift language features and syntax along the way, and understand why using Swift (instead of Objective-C) makes iOS and Mac app development easier, faster, and safer. You'll also work with several exercises to help you practice as you learn. Learn the OS X and iOS application lifecycle Use storyboards to design adaptive interfaces Explore graphics systems, including the built-in 2D and 3D game frameworks Display video and audio with AVFoundation Store data locally with the file system, or on the network with iCloud Display lists or collections of data with table views and collection views Build apps that let users create, edit, and work with documents Use MapKit, Core Location, and Core Motion to interact with the world

This book uses social psychology to discuss politics, specifically liberalism.

Many machine learning tasks involve solving complex optimization problems, such as working on non-differentiable, non-continuous, and non-unique objective functions; in some cases it can prove difficult to even define an explicit objective function. Evolutionary learning applies evolutionary algorithms to address optimization problems in machine learning, and has yielded encouraging outcomes in many applications. However, due to the heuristic nature of evolutionary optimization, most outcomes to date have been empirical and lack theoretical support. This shortcoming has kept evolutionary learning from being well received in the machine learning community, which favors solid theoretical approaches. Recently there have been considerable efforts to address this issue. This book presents a range of those efforts, divided into four parts. Part I briefly introduces readers to evolutionary learning and provides some preliminaries, while Part II presents general theoretical tools for the analysis of running time and approximation performance in evolutionary algorithms. Based on these general tools, Part III presents a number of theoretical findings on major factors in evolutionary optimization, such as recombination, representation, inaccurate fitness evaluation, and population. In closing, Part IV addresses the development of evolutionary learning algorithms with provable theoretical guarantees for several representative tasks, in which evolutionary learning offers excellent performance.

Elements of Shipping was first published in 1964 and has become established as a market leader over its many editions. This latest version is entirely updated to take in the many changes that have occurred in the shipping industry in recent years and features new chapters on multimodalism, seaports and electronic data interchange. Emphasis is also placed on professionalism and the need to have the latest technology and professionally qualified personnel to operate a shipping service today. It remains essential reading for the shipping executive along with students and academics with an interest in the shipping industry.

From the author of the universally acclaimed debut novel *A Case of Exploding Mangoes*: a subversive, often shockingly funny new novel set in steaming Karachi, about second chances, thwarted ambitions, and love in the most unlikely places. The patients of the Sacred Heart Hospital for All Ailments need a miracle, and Alice Bhatti may be just what they're looking for. She's the new junior nurse, but that's the only thing ordinary about her. Her father is a part-time healer in the French Colony, Karachi's Christian slum--and it seems she has inherited his part-time gift. With a bit of begrudging but inspired improvisation, Alice brings succour to the patients lining the hospital's corridors. Yet, a Christian in an Islamic world, she is ensnared in the red tape of hospital bureaucracy, trapped by the caste system, and torn between her duty to her patients, her father, and her husband--an apprentice to the nefarious "Gentlemen's Squad" of the police, and about to plunge them both into a situation so dangerous that perhaps not even a miracle can save them. But, of course, Alice Bhatti is no ordinary nurse...

Brave New Digital Classroom examines the most effective ways to utilize technology in language learning. The author deftly interweaves the latest results of pedagogical research with descriptions of the most successful computer-assisted language learning (CALL) projects to show how to implement technology in the foreign-language curriculum to assist the second language acquisition process. This fully updated second edition includes new chapters on the latest electronic resources, including gaming and social media, and discusses the realities and potential of distance learning for second language acquisition. The author examines the web, CALL applications, and computer-mediated communication (CMC), and suggests how the new technologically assisted curriculum will work for the foreign-language curriculum. Rather than advocating new technologies as a replacement for activities that can be done equally well with traditional processes, the author envisions a radical change as teachers rethink their strategies and develop their competence in the effective use of technology in language teaching and learning. Directed at all language teachers, from the elementary school to postsecondary levels, the book is ideal for graduate-level courses on second language pedagogy. It also serves as an invaluable reference for experienced researchers, CALL developers, department chairs, and administrators.

This volume teaches calculus in the biology context without compromising the level of regular calculus. The material is organized in the standard way and explains how the different concepts are logically related. Each new concept is typically introduced with a biological example; the concept is then developed without the biological context and then the concept is tied into additional biological examples. This allows readers to first see why a certain concept is important, then lets them focus on how to use the concept without getting distracted by applications, and then, once readers feel more comfortable with the concepts, it revisits the biological applications to make sure that they can apply the concepts. The book features exceptionally detailed, step-by-step, worked-out examples and a variety of problems, including an unusually large number of word problems. The volume begins with a preview and review and moves into discrete time models, sequences, and difference equations, limits and continuity, differentiation, applications of differentiation, integration techniques and computational methods, differential equations, linear algebra and analytic geometry, multivariable calculus, systems of differential equations and probability and statistics. For faculty and postdocs in biology departments.

A proliferation of lawsuits involving sport utility vehicles, defective tires, medical devices and drugs, and asbestos abounds. Public attention to products liability cases is at an all-time high, and awards routinely run into the millions of dollars. When developing a strategy in this high stakes world, attorneys can't afford to have anything other than the best information and insight into this evolving area of law. Lawyers need practical tools to assess a products liability case's potential and build their approach, and Shapo on the Law of Products Liability provides the tools to give you the winning edge. Through a holistic analysis of the law and its principal developments as witnessed in hundreds of cases, this treatise gives litigators a wide variety of perspectives on potential strategies, and the tools to support those strategies with persuasive arguments. This authoritative two-volume work will enable you to: Assess products liability case potential and build sound litigation strategies Dig deep into products liability law to

build creative approaches to litigation Craft a winning case and reap the greatest reward for your clients Find the tools and information to support strategies with persuasive arguments Both federal and state courts contribute a rich mix of decisions to products liability law, which covers both consumer products and occupational hazards. This indispensable resource for the products liability practitioner helps you prepare your case. Is the product defective? Who is liable? What is the manufacturer's responsibility? Who can be sued? What kind of awards may be realized? How might this be defended? Shapo on the Law of Products Liability also includes coverage of: Asbestos litigation Chinese drywall Food and drug Medical devices Design/manufacturing defects claims Punitive damages Discovery rule Up to date analysis and commentary History and background on products liability law Damages Advertising material Packaging Marshall S. Shapo, the Frederic P. Vose Professor at Northwestern University School of Law, is a nationally recognized authority on torts and products liability law. A dual portrait of the author and her late sister traces how both suffered from years of abuse at the hands of men before the author successfully escaped her own cycle of violence, a survival that was overshadowed by her sister's murder by a lover. "A wide-ranging, significant contribution." - Göran Therborn, Cambridge University "A lively, well-informed, and accessible guide through the dynamics and complexities of globalization." - Robert Holton, Trinity College, Dublin "This is an excellent text on globalisation. It is theoretically sophisticated, critically engaging, and empirically comprehensive... perfect for courses on globalisation within sociology programmes in particular." - Andrew Kirton, Liverpool University Do we confuse globalization for Americanization? What are the distinctive elements in the interplay of the local and the global? This book examines globalization from the perspective of both the West and the East. It considers globalization as a general social and economic process, and the challenges it presents for Western social science. The meaning of a global perspective is explored through various concrete examples: religion, migration, medicine, terrorism, global disasters, citizenship, multiculturalism, media and popular culture. Introduced with a foreword from Roland Robertson, the book is brimming with novel interpretations and fresh insights that will contribute to illuminating the practical realities of globalization. Contract as Promise is a study of the philosophical foundations of contract law in which Professor Fried effectively answers some of the most common assumptions about contract law and strongly proposes a moral basis for it while defending the classical theory of contract. This book provides two purposes regarding the complex legal institution of the contract. The first is the theoretical purpose to demonstrate how contract law can be traced to and is determined by a small number of basic moral principles. At the theory level the author shows that contract law does have an underlying, and unifying structure. The second is a pedagogic purpose to provide for students the underlying structure of contract law. At this level of doctrinal exposition the author shows that structure can be referred to moral principles. Together the two purposes support each other in an effective and comprehensive study of contract law. This second edition retains the original text, and includes a new Preface. It also includes a substantial new essay entitled Contract as Promise in the Light of Subsequent Scholarship--Especially Law and Economics which serves as a retrospective of the work accomplished in the last thirty years, while responding to present and future work in the field.

The Complete Guide to Task 1 Writing has been written for both beginners and more advanced students of IELTS and offers an ideal way to prepare more thoroughly for the IELTS test. For more than one hundred years, Harvard's use of the case method of appellate opinions dominated legal education. Deploring the attempt to reduce law to an autonomous system of rules and principles, the realists at Yale developed a functional approach to the discipline--one that stressed the factual context of the case rather than the legal principles it raised, one that attempted to address issues of social policy by integrating law with the social sciences. Universities throughout the US and the rest of the world offer Food Biotechnology courses. However, until now, professors lacked a single, comprehensive text to present to their students. Introduction to Food Biotechnology describes, explains, and discusses biotechnology within the context of human nutrition, food production, and food processing. Written for undergraduate students in Food Science and Nutrition who do not have a background in molecular biology, it provides clear explanations of the broad range of topics that comprise the field of food biotechnology. Students will gain an understanding of the methods and rationales behind the genetic modification of plants and animals, as well as an appreciation of the associated risks to the environment and to public health. Introduction to Food Biotechnology examines cell culture, transgenic organisms, regulatory policy, safety issues, and consumer concerns. It covers microbial biotechnology in depth, emphasizing applications to the food industry and methods of large-scale cultivation of microbes and other cells. It also explores the potential of biotechnology to affect food security, risks, and other ethical problems. Biotechnology can be used as a tool within many disciplines, including food science, nutrition, dietetics, and agriculture. Using numerous examples, Introduction to Food Biotechnology lays a solid foundation in all areas of food biotechnology and provides a comprehensive review of the biological and chemical concepts that are important in each discipline. The book develops an understanding of the potential contributions of food biotechnology to the food industry, and towards improved food safety and public health.

In the Greenwich Village of 1964, eleven-year-old Fin moves in with his glamorous, careless older sister, and it's hard to tell who's raising whom.

This is the first book to provide a comprehensive investigation of gender and the law in the United States. Deborah Rhode describes legal developments over the last two centuries against a background of historical and sociological changes in women's activities and attitudes toward these new developments. She shows the way cultural perceptions of gender influence and in turn are influenced by legal constructions, and what this complicated interaction implies about the possibility-or impossibility-of using law as a tool of social change.
