Lifting the Scientific Veil has been written to afford the nonscience student the same meaningful opportunity to explore germane scientific topics as is generally given the science student to learn about the humanities and social sciences. Since nonscientists are generally responsible for making laws, financing research, or, at the very least, for voting, it is essential that they understand the significant impact that science has on everyday life. The book is designed to introduce nonscientists in an informative and comprehensible manner to four of the most significant scientific theories of the twentieth century: the big bang, quantum physics, relativity, and evolution. After each theory is explained informally, the book shows how that theory and related technology impact upon one's personal life. Legal and political aspects of these theories are explored as well as philosophical and theological implications.

Students benefit from the user-friendly problems exploring each issue, illustrating in a concise way how the Code applies to transactions, both as to legal result and as a guide to drafting agreements and financial statements.
