Althusser and Law is the first book specifically dedicated to the place of law in Louis Althusser's philosophy. The growing importance of Althusser's philosophy in contemporary debates on the left has - for practical and political, as well theoretical reasons - made a sustained consideration of his conception of law more necessary than ever. As a form of what Althusser called 'Ideological State Apparatuses', law is at the forefront of political struggles: from the destruction of Labour Law to the exploitation of Patent Law; from the privatisation of Public Law to

the ongoing hegemony of Commercial Law; and from the discourse on Human Rights to the practice of judicial courts. Is Althusser still useful in helping us to understand these struggles? Does he have something to teach us about how law is produced, and how it is used and misused? This collection demonstrates that Althusser's ideas about law are more important, and more contemporary, than ever. Indeed, the contributors to Althusser and Law argue that Althusser offers a new and invaluable perspective on the place of law in contemporary life. In the era before IoT, the world wide web, internet, web 2.0 and social media made people's lives comfortable by providing web services and enabling access personal data irrespective of their location. Further, to save time and improve efficiency, there is a need for machine to machine communication, automation, smart computing and ubiquitous access to personal devices. This need gave birth to the phenomenon of Internet of Things (IoT) and further to the concept of Internet of Everything (IoE). This book aims to present different aspects of IoE, challenges faced by IoE and its applications, divided into 8 chapters. This multifaceted coverage of the various verticals and IoT layers is the main attraction of this book.

Providing a detailed look at helicopter maneuvers, the information in this guide helps to solidify concepts gained from flight training in a student

pilot's mind by incorporating the Practical Test Standards into every maneuver description. The graphical and textual explanations work in conjunction with an instructor's lessons, allowing students to prepare before sessions and to review afterwards as well. Because helicopter pilots must rely on their memory or understanding of a particular maneuver, the Helicopter Maneuvers Manual provides readers with a crystal-clear picture of what level of performance is expected of them every step and includes insights into the common errors associated with each move.

India's infrastructure in the area of aerospace industry is well developed even if inadequate for the future. Private industry in India has moved well beyond its traditional position of small-medium scale industry to large scale modern manufacturing sectors in diverse areas, and is now capable of partnership with the best in terms of technology, management and productivity. Contrary to conventional wisdom, they are partners in a variety of defence industry enterprises. The aerospace industry, in particular, has consistently performed creditably for a developing country that India is. There is tremendous scope and potential for energising our national aerospace industry in the coming decades to meet the national needs of the defence and civilian sectors. In turn, this would also increase the opportunities for greater cooperation with the aerospace industry in the developed countries for mutual benefit. This would reinforce an expanding and

A collection of fun and surprising facts about our world.

In *Mordin On Time*, Nick Mordin sets out his method for answering the most fundamental question facing punters in any race, namely: which is the fastest horse? He was timing the sections of races with a stop watch, estimating wind strength and direction, adjusting for movements of running rails, using projected times and calculating average times years before the best-selling American books on speed rating were published. This new edition incorporates much new material, including standard times for all Irish racecourses (plus the major French ones). *Mordin On Time* enables the reader to construct their own speed ratings wherever they live.

A challenging new look at the great thinkers whose ideas have shaped our civilization *From Socrates to Sartre* presents a rousing and readable introduction to the lives, and times of the great philosophers. This thought-provoking book takes us from the inception of Western society in Plato's Athens to today when the commanding power of Marxism has captured one third of the world. T. Z. Lavine, Elton Professor of Philosophy at George Washington University, makes philosophy come alive with astonishing clarity to give us a deeper, more meaningful understanding of ourselves and our times. *From Socrates to Sartre* discusses Western philosophers in terms of the historical and intellectual environment which influenced them, and it connects their lasting ideas to the public and private choices we face in America today. *From Socrates to Sartre* formed the basis of the PBS television series of the same name.

Three top Wall Street analysts reveal enduring lessons in sustainable success from the great industrial titans—the high-tech companies of their day—to the disruptors that now

dominate the economy. Before Silicon Valley disrupted the world with new technologies and business models, America's industrial giants paved the way. Companies like General Electric, United Technologies, and Caterpillar were the Google and Amazon of their day, setting gold standards in innovation, growth, and profitability. Today's leaders can learn a great deal from their successes, as well as their missteps. In this essential guide, three veteran Wall Street analysts reveal timeless lessons from the titans of industry—and offer battle-tested survival tactics for an ever-changing world. You'll learn: how GE became the largest company on earth—only for a culture of arrogance to set in motion the largest collapse in history how Boeing reassessed risks, raised profits—and tragically lost its balance how Danaher avoided the pitfalls of tremendous success—by continually reinventing itself how Honeywell experienced a near-fatal cultural breakdown—and executed a flawless turnaround how Caterpillar relied too much on forecasting, lost billions—and rallied by recommitting to the basics Filled with illuminating case studies and brilliant in-depth analysis, this invaluable book provides a multitude of insights that will help you weather market upheavals, adapt to disruptions, and optimize your resources to your best advantage. You'll learn hard-won lessons in innovation, growth, resilience, and operational excellence, as well as the time-proven fundamentals of continuous improvement for lasting success. In the end, you'll have your own personal toolbox of useful takeaways from more than a century's worth of data, experience, wisdom, and can-do spirit, courtesy of some of the greatest business enterprises of all time. This is how manufacturers survived the first disruptors of technology—and how today's giants can survive and thrive during continuous cycles of disruption.

Features;* Profiles of iconic types such as the Mil MI-24 'Hind', the Mil-28 and the Kamov Ka-52 'Alligator'.* Summary of design histories and careers* Colour reference for paint schemes * Critical review of available kits* Over 180 colour and black and white illustrations, including 20 full colour side-views and a range of various 3-view line-drawings. With profiles of a host of exciting designs, accompanied by a descriptive narrative history of the various types, this volume combines practical information with reflective historical analysis, making for a visually rich volume providing modellers with all they need to know about the most exciting Russian Gunship helicopter designs and associated model kits. This edition deals primarily with the three principal attack helicopter types of the present-day Russian Army; The Mil MI-24 'Hind' otherwise known as 'the Flying Crocodile' has been produced in large numbers with many versions and variants produced. It has been supplied to a host of countries and seen considerable combat action in conflicts both in the Soviet Union and abroad. It still forms the backbone of army aviation in Russia and remains at the forefront of national exposure. The Mil-28 is a more contemporary type and is broadly the equivalent of the McDonnell Douglas AH-64 Apache. The Kamov Ka-52 'Alligator' NATO name 'Hokum-B' also features. This helicopter is in service with the Army and is entering service also with the Russian Navy. Well-illustrated histories and structural analyses are supplemented with detailed descriptions of the various plastic scale model kits which have been released, along with commentary concerning their accuracy and available modifications and decals. This level of detail and insight is sure to prove invaluable to a wide community of model-makers, both at

Whereas traditional classroom instruction requires pilots to be pulled 'off the line', a training facility to be maintained and instructors to be compensated, e-learning is extremely cost-effective and therefore an attractive alternative. However, e-learning only saves money if the training is effective. Eager to reap financial benefits, e-learning courses have a history of varying dramatically in quality. The poorest courses are those that directly convert classroom-based presentations to an online format, not recognizing that computer-based instruction is an entirely different medium. Addressing this issue directly, *e-Learning in Aviation* explores the characteristics of computer-based course design and multimedia that are associated with improved learning. It then provides guidance regarding how to use research-based instructional design principles to plan, design, develop, and implement an e-Learning course within an aviation organization and continually evaluate whether or not the course is accomplishing instructional goals. A blended learning strategy, which incorporates both face-to-face and computer-based instruction, is suggested as the most appropriate choice for the majority of aviation companies. The goal of this approach is to utilize e-Learning as a tool to reduce time at the training centre and thereby increase pilot productivity and potentially improve the quality of training. Although the examples within this book focus on pilot training, the suggestions and guidelines are applicable to all employee groups within the industry.

Developing an Online Educational Curriculum: Techniques and Technologies acts as a guidebook for teachers and administrators as they look for support with their online education programs. It offers teaching suggestions for everything from course development to time management and community building. The book is designed to provide information to help teachers work more effectively with online tools, develop course materials for existing online courses, work with the internet as a medium of education and complete daily activities - such as evaluating assignments, lecturing and communicating with students more easily.

Administrators are also given support in their efforts to recruit, train, and retain online teachers, allocate resources for online education and evaluate online materials for promotion and tenure.

By definition, winning means that you competed and you came out ahead. Human nature requires us to compete in order to survive. Therefore, winning and survival have the element of success in common. To ascend to a winning position, you need a goal, a desire to achieve it, and the qualities of discipline, perseverance and action to attain it. Having your goal and setting yourself up to achieve your goal is the first step in the process. You adjust your mindset

The Indian Light Combat Aircraft (Tejas) has had a long and checkered development history. The author traces in some detail the development of the all important fly-by-wire flight control system, which was being developed in India for the first time. The less than ideal relationship between the three key players in the project, ADA, HAL and the IAF can be read between the lines. In spite of this, the many challenges overcome by the development team is a heartwarming success story of Indian technological endeavour.

This fascinating interdisciplinary work explores U.S. politics since 2015 and offers psychodynamic insights into the unconscious undercurrents of contemporary culture and politics in the United States. Allcorn and Stein expertly lead readers up the steep learning curve of understanding the Trump era by exploring seven key elements of recent political dynamics. Using the complementary psychodynamic models of object relations, Group Relations and Karen Horney's tripartite theory, this book makes sense of the Age of Trump and its chaotic world of alternate facts, conspiracy theories,

reality TV politics, hoax pandemics, and the sweeping chaos of life in the United States. This sense-making relies on two triangulations. The first represents the complex systemic political scene. The second uses three psychoanalytic theories to understand social, political, and organizational dynamics. This book is a key resource for helping readers know and understand ourselves, our fellow citizens, colleagues, family, friends and what Trump and his followers call "them" such as liberals and foreign immigrants, as well as both the larger polarized social and political context in the United States today. The book also provides concrete examples of how these discoveries can be operationalized both in organizations and at the level of national government and leadership. This book is an essential reading for students in organizational behavior including leadership and how governments operate, as well as behavioral health professionals consulting or offering therapy to organizations.
