This accessible and friendly text is based on the premise that all nurses need a working knowledge of the normal functioning of the human body. It is only when we understand the normal that the abnormal pathological situation makes sense. If we can understand how the body goes wrong then it often becomes obvious what needs to be done to treat the disorder. So physiology and pathophysiology can both be used to inform our clinical interventions and provide us with rationales for care. In this concise text, John Campbell explains the physiology and necessary basic science in a way that is easy to

understand and learn. Diagrams are an important part of this philosophy. Drawing on teaching and learning research, the Sixth Edition provides new tools to improve students' reading, focus, and self-assessment. Chapters are now divided into brief "study units," each of which concludes with a self-test question to increase comprehension. NEW "Putting Psychology to Work" features show students how to apply psychology concepts to future careers. Our formative, adaptive learning tool, InQuizitive, and our online psychology labs, ZAPS 2.0, provide a hands-on approach to assessing students' understanding.

Biology for AP® courses covers the scope and sequence requirements of a typical two-semester Advanced Placement® biology course. Each section of the book includes an introduction based on the AP® curriculum and includes rich features that engage students in scientific practice and AP® test preparation; it also highlights careers and research opportunities in biological sciences.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand
