The First World War, now a century ago, still shapes the world in which we live, and its legacy lives on, in poetry, in prose, in collective memory and political culture. By the time the war ended in 1918, millions lay dead. Three major empires lay shattered by defeat, those of Germany, Austria-Hungary, and the Ottomans. A fourth, Russia, was in the throes of a revolution that helped define the rest of the twentieth century. *The Oxford History of the First World War* brings together in one volume many of the most distinguished historians of the conflict, in an account that matches the scale of the events. From its causes to its consequences, from the Western Front to the Eastern, from the strategy of the politicians to the tactics of the generals, they chart the course of the war and assess its profound political and human consequences. Chapters on economic mobilization, the impact on women, the role of propaganda, and the rise of socialism establish the wider context of the fighting at sea and in the air, and which ranged on land from the trenches of Flanders to the mountains of the Balkans and the deserts of the Middle East. First published for the 90th anniversary of the 1918 Armistice, this highly illustrated revised edition contains significant new material to mark the 100th anniversary of the war's outbreak. This workbook offers a variety of activities to suit different learning styles. Activities such as modeling and mapping allow students to visualize and understand biological processes. New activities focus on reading and developing graphs and basic skills.

The instant New York Times bestseller “Expert storytelling . . . [Pollan] masterfully elevates a series of big questions about drugs, plants and humans that are likely to leave readers thinking in new ways.”—New York Times Book Review From #1 New York Times bestselling author Michael Pollan, a radical challenge to how we think about drugs, and an exploration into the powerful human attraction to psychoactive plants—and the equally powerful taboos. Of all the things humans rely on plants for—sustenance, beauty, medicine, fragrance, flavor, fiber—surely the most curious is our use of them to change consciousness: to stimulate or calm, fiddle with or completely alter, the qualities of our mental experience. Take coffee and tea: People around the world rely on caffeine to sharpen their minds. But we do not usually think of caffeine as a drug, or our daily use as an addiction, because it is legal and socially acceptable. So, then, what is a “drug”? And why, for example, is making tea from the leaves of a tea plant acceptable, but making tea from a seed head of an opium poppy a federal crime? In *This Is Your Mind on Plants*, Michael Pollan dives deep into three plant drugs—opium, caffeine, and mescaline—and throws the fundamental strangeness, and arbitrariness, of our thinking about them into sharp relief. Exploring and participating in the cultures that have grown up around these drugs while consuming (or, in the case of caffeine, trying not to consume) them, Pollan reckons with the powerful human attraction to psychoactive plants. Why do we go to such great lengths to seek these shifts in consciousness, and then why do we fence that universal desire with laws and customs and fraught feelings? In this unique blend of history, science, and memoir, as well as participatory journalism, Pollan examines and experiences these plants from several very different angles and contexts, and shines a fresh light on a subject that is all too often treated reductively—as a drug, whether licit or illicit. But that is one of the least interesting things you can say about these plants, Pollan shows, for when we take them into our bodies and let them change our minds, we are engaging with nature in one of the most profound ways we can. Based in part on an essay published almost twenty-five years ago, this groundbreaking and singular consideration of psychoactive plants, and our attraction to them through time, holds up a mirror to our fundamental human needs and aspirations, the operations of our minds, and our entanglement with the natural world.
