Adopting an interdisciplinary perspective, this volume explores the reality of the principle of human dignity – a core value which is increasingly invoked in our societies and legal systems. This book provides a systematic overview of the legal and philosophical concept in sixteen countries representing different cultural and religious contexts and examines in particular its use in a developing case law (including of the European Court of Human Rights and of the Inter-American Court of Human Rights). Whilst omnipresent in the context of bioethics, this book reveals its wider use in healthcare more generally, treatment of prisoners, education, employment, and matters of life and death in many countries. In this unique comparative work, contributing authors share a multidisciplinary analysis of the use (and potential misuse) of the principle of dignity in Europe, Africa, South and North America and Asia. By revealing the ambivalence of human dignity in a wide range of cultures and contexts and through the evolving reality of case law, this book is a valuable resource for students, scholars and

professionals working in bioethics, medicine, social sciences and law. Ultimately, it will make all those who invoke the principle of human dignity more aware of its multi-layered character and force us all to reflect on its ability to further social justice within our societies.

In the last few years, digital SLR cameras have taken the astrophotography world by storm. It is now easier to photograph the stars than ever before! They are compact and portable, flexible to adapt with different lenses and for telescope use, and above all DSLR cameras are easy and enjoyable to use. In this concise guide, experienced astrophotography expert Michael Covington outlines the simple, enduring basics that will enable you to get started, and help you get the most from your equipment. He covers a wide selection of equipment, simple and advanced projects, technical considerations and image processing techniques. Unlike other astrophotography books, this one focuses specifically on DSLR cameras, not astronomical CCDs, non-DSLR digital cameras, or film. This guide is ideal for astrophotographers who wish to develop their skills using DSLR cameras and as a friendly introduction to amateur astronomers or photographers curious about photographing the night sky.

With loss of habitats throughout the world occurring at a staggering rate, it is critical to document what is being lost. This book strives to do that by focusing on longhorned woodboring beetles in Bolivia. Wholesale clearing of large tracts of land kills everything or forces species to move quickly to other areas, disrupting the balance of the ecosystem. This book will help people discover and appreciate some of the amazing diversity of life that exists in the undeveloped and/or remote natural areas of Bolivia. Nearly 1,900 species of longhorned woodboring beetles (Disteniidae, Vesperidae, and Cerambycidae) are known from Bolivia (with more than 200 species yet to be determined). This work features 500 of them, representing the breadth of morphological evolution.
