If you've invested in a camera as sophisticated as the Canon EOS 7D II, you're looking for more than good pictures -- you demand outstanding photos. After all, the 7D II is the most advanced APS-C format camera that Canon has ever introduced. It boasts 20 megapixels of resolution, blazing-fast automatic focus, and cool features like full high-definition movie shooting. But your gateway to pixel proficiency is dragged down by the slim little book included in the box as a manual. You know everything you need to know is in there, somewhere, but you don't know where to start. In addition, the camera manual doesn't offer much information on photography or digital photography. Nor are you interested in spending hours or days studying a comprehensive book on digital SLR still photography that doesn't necessarily apply directly to your 7D II. What you need is a guide that explains the purpose and function of the 7D II's basic controls, how you should use them, and why. Ideally, there should be information about file formats, resolution, exposure, and special autofocus modes available, but you'd prefer to read about those topics only after you've had the chance to go out and take a few hundred

great pictures with your new camera. Why isn't there a book that summarizes the most important information in its first two or three chapters, with lots of illustrations showing what your results will look like when you use this setting or that? Now there is such a book. If you want a quick introduction to the 7D II's focus controls, wireless flash synchronization options, how to choose lenses, or which exposure modes are best, this book is for you. If you can't decide on what basic settings to use with your camera because you can't figure out how changing ISO or white balance or focus defaults will affect your pictures, you need this guide.

Presents an introduction to the features of the Canon EOS 60D, covering such

topics as exposure, autofocus, Live View, menu operations, lenses, lighting, flash photography, and editing images.

The basic structure of the EOS Rebel T8i/850D camera is similar to that of its predecessor model EOS Rebel T6i. This camera has a 24 Megapixel APS-C sensor. The new generation sensor with a dual-chip can capture very good images in high-contrast conditions. Due to the presence of the Dual-Chip CMOS AF sensor, it is much faster and has a much larger coverage area. It is possible to make some good photos by using the Dual-Chip CMOS AF sensor. It helps in improved AF and AF-C performance as compared to the EOS Rebel T6i.

Furthermore, the user can use this camera in low-light situations. In the photos captured in low light, it is possible to see a very bright bokeh effect. Also, it has better autofocus ability than the EOS Rebel T6i. The maximum ISO can be set up to 16000 and the range of ISO 100-32000. Its electronic shutter is faster than the EOS Rebel T6i. It has a new AF algorithm that makes it possible to track the subject with very little user effort. The camera can also shoot videos in 4K resolution at 30 frames per second. The previous model EOS Rebel T6i can shoot videos only in HD resolution. This camera features a Live View Finder, which can display what is in the viewfinder on the screen. The screen can be tilted up and down from the right side of the camera. The built-in pop-up flash can

be attached to the camera to allow users to click portraits with no flash. The viewfinder and the rear LCD are always shown on the top plate and the sensitivity can be adjusted. The Canon EOS 7D Mark II is an update to the classic 7D model, widely regarded as an excellent APS-C sensor DSLR, aimed at the serious enthusiast. The new model boasts faster burst shooting, improved autofocus and a much broader ISO range, contained in one of its best-built camera bodies. For stills photographers, the Mark II offers an all cross-type, 65-point AF module that works in conjunction with a 150,000-pixel RGB + IR metering sensor, offering the latest version of the 'Intelligent Tracking and Recognition' (iTR) focus system featured in the EOS-1D X. With iTR engaged and an initial focus point selected, focus can be initiated with a half-depress of the shutter-release button, leaving the camera to track the subject as it moves across the frame. The camera's continuous shooting rate is 10 frames per second, previously limited to pro-grade sports cameras. The shutter is rated to more than 200,000 cycles. The main image sensor is a variant of the Dual Pixel AF design first seen in the Canon

EOS 70D, offering 20MP output. Using its image sensor, the camera can capture information about subject position and depth whenever its mirror is raised. This potentially gives more decisive autofocus and subject tracking in 'Live View' and while shooting video. The Mark II's movie capabilities have been improved, offering 1080p/60 shooting capability and a choice of MOV or MP4 format, plus three compression options (IPB-Lite, IPB and All-I).
