The Dice Man's son must roll the dice himself as his neat and orderly world begins to crumble. Larry Rhinehart is the son of the renegade psychiatrist Luke Rhinehart, who introduced the world to dice-living and dice therapy, where decisions are made not by the self but by the roll of a die. Since his father deserted him when he was still a child, Larry has bitterly rejected everything his father stood for. He has embraced order and control. Now a wealthy Wall Street analyst, he is about to marry the boss's daughter, and become a good deal wealthier. Then Homeland Security shows up in Larry's office searching for his father, who is suspected of being behind acts of cyber warfare against government, banking and Wall Street interests. Larry's carefully organized world begins to crumble. Forced to try find his father before the government can, his search is made in the company of Kim, a sexy admirer of Luke's. His quest takes him to Lukedom, a Dice Commune where everyone changes roles every day—to Larry's own dicing, which leads to love, a broken engagement, rigging the stock market—and total chaos. Larry's search is by turns funny, moving, and erotic. By the time he finally confronts his father

In this important study, Carl James reviews the role that contrastive analysis can play in understanding and solving problems in second or foreign language learning and teaching. Using both psycholinguistic and linguistic analysis, he establishes a sound theoretical basis for CA before going on to illustrate its contribution to the study of linguistic universals, bilingualism, and language pedagogy. The book offers a range of examples to support its arguments, enabling readers to grasp the principles and then to pursue their own work in this area. Contrastive Analysis presents a successful theoretical and practical case for the value of CA as a research tool, both for those studying applied linguistics and for teachers needing to adjust their teaching to the state of knowledge of their students.

teacher Joko Beck, is: 'A good practice is always undermining itself.' Continent to continent, culture to culture, language to language, haiku has made itself new. During this transformation, practitioners parted ways with rules that worked best for Japanese speakers. New languages, geographies, climates, and cultural environments triggered new approaches. The essential core ideas of Basho's time are with us, though. After OS X Mavericks was met with indifference, many worried that future OS X updates would continue to be a steady stream of minor upgrades and tweaks. Continuing the new naming convention of Californian locations, the new iteration will be dubbed 'Yosemite' after California's beloved national park, with no relation to a certain Looney Tunes character. With OS X Yosemite, Apple is showing the world that OS X is not doomed to incremental upgrades, and diligently went through everything "feature by feature, pixel by pixel" to create a totally new and improved makeover for an old friend. If you've used any OS X version before, there's no way you'll feel totally lost as you forage through Yosemite but your computer will definitely look and feel like a brand new system. There are many

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.
