Full of training tips and exercises--from introducing your cat to a new baby to helping them deal with visits to the vet--*The Trainable Cat* is the essential cat bible for cat owners and lovers. What does novelist, essayist, and memoirist Jenny Diski know about animals? She wasn't really sure as she began to write this book, and she may not be sure now. But of this she is certain: our relationships with, and attitudes toward, animals are really worth thinking about. In "What I Don't Know About Animals," she shows why. Diski sets out on her wide-ranging investigation by remembering the stuffed cuddly creatures from her childhood, the animal books she read, the cartoons she watched, the strays she found. She considers the animals who have lived and still live with her (most especially Bunty the cat), animals she has encountered close up, and those she has feared. She examines human beings, too, and how they have looked at, studied, treated, and written about the non-human creatures of our shared planet. Ranging still further, the author interviews scientists, discusses Derrida and his cat, and observes elephants in Kenya, always seeking the key to the complex relationship we in the modern West have with animals. Subtle, intelligent, and always engaging, this book is a brilliant exploration of what it means to be human and what it means to be animal, and the uncertainty of what we can know about either.

Adopting a minimalist framework, the dissertation provides an analysis for the syntactic structure of comparatives, with special attention paid to the derivation of the subclause. The proposed account explains how the comparative subclause is connected to the matrix clause, how the subclause is formed in the syntax and what additional processes contribute to its final structure. In addition, it casts light upon these problems in cross-linguistic terms and provides a model that allows for synchronic and diachronic differences. This also enables one to give a more adequate explanation for the phenomena found in English comparatives since the properties of English structures can then be linked to general settings of the language and hence need no longer be considered as idiosyncratic features of the grammar of English.

First, the dissertation provides a unified analysis of degree expressions, relating the structure of comparatives to that of other degrees. It is shown that gradable adjectives are located within a degree phrase (DegP), which in turn projects a quantifier phrase (QP) and that these two functional layers are always present, irrespectively of whether there is a phonologically visible element in these layers. Second, the dissertation presents a novel analysis of Comparative Deletion by reducing it to an overtiness constraint holding on operators: in this way, it is reduced to morphological differences and cross-linguistic variation is not conditioned by way of postulating an arbitrary parameter. Cross-linguistic differences are ultimately dependent on whether a language has overt operators equipped with the relevant – [+compr] and [+rel] – features. Third, the dissertation provides an adequate explanation for the phenomenon of Attributive Comparative Deletion, as attested in English, by way of relating it to the regular mechanism of Comparative Deletion. I assume that Attributive Comparative Deletion is not a universal phenomenon, and its presence in English can be conditioned by independent, more general rules, while the absence of such restrictions leads to its absence in other languages. Fourth, the dissertation accounts for certain phenomena related to diachronic changes, examining how the changes in the status of comparative operators led to changes in whether Comparative Deletion is attested in a given language: I argue that only operators without a lexical XP can be grammaticalised. The underlying mechanisms underlying are essentially general economy principles and hence the processes are not language-specific or exceptional. Fifth, the dissertation accounts for optional ellipsis processes that play a crucial role in the derivation of typical comparative subclauses. These processes are not directly related to the structure of degree expressions and hence the elimination of the quantified expression from the subclause; nevertheless, they are shown to be in interaction with the mechanisms underlying Comparative Deletion or the absence thereof.

This book provides a new analysis for the syntax of comparatives, focusing on various deletion phenomena affecting the subclause. In particular, the proposed account shows that Comparative Deletion is merely a surface phenomenon that can be drawn back to the overtiness of the comparative operator and the availability of lower copies of a movement chain, and it is thus subject to both language-internal and cross-linguistic variation. The main focus of the book is on English, yet other languages are also discussed

for comparative purposes, with the aim of showing what the idiosyncratic properties of English comparatives are.

Written by a cat, and with helpful insights by other cats, How to Be a Cat is essential reading not just for all felines but also for their owners and cat lovers alike . if only to get an insight into their pet's sometimes curious behaviour. As you'd expect from a book written by a cat about humans, the advice can be condescending, cynical and anarchic in equal measures. Kitty Pusskin and her cat companions offer helpful observations and advice on specific feline issues, such as the best kind of furniture on which to sharpen your claws, how to wake up owners who don't supply breakfast on time, and why you should never leave an empty box unexplored. How to Be a Cat is the official rulebook of the feline world, a hilarious and useful guide for living with - or putting up with - humans, and always getting the upper paw.

The cat, also called the domestic cat or house cat, is a small feline carnivorous mammal of the subspecies *Felis silvestris catus*. Its most immediate pre-domestication ancestor is the African wild cat, *Felis silvestris lybica*. The cat has been living in close association with humans for at least 3,500 years; the Ancient Egyptians routinely used cats to keep mice and other rodents (mostly rats) away from their grain (and also believed that cats were sacred to the goddess Bastet). The history of the domestic cat may stretch back even further, as 8,000-year-old bones of humans and cats were found buried together on the island of Cyprus. Why did Isaac Newton invent the cat flap? How did the first mousetrap come about? Why did it take nearly 20 years to make sliced bread? From the moment the alarm clock wakes us up in

the morning until the time we switch the light off at night, we are surrounded by things without which our lives would be impossible: microwaves, televisions, cars, cell phones, and credit cards—the list is endless. Yet how often do we consider how such miniature wonders of our lives came about, who invented them, and why? The answers are often incredibly interesting. In this delightful volume, Harry Oliver reveals the most diverting and amusing stories that lie behind the objects and inventions we take for granted, from household items to the technology that fills our world. Everything around us was born from an idea, and as you read the pages in this book, the ordinary will soon appear rather more extraordinary than it did before.

“I know that the correct collective noun for a gathering of cats is a ‘clowder’, but ‘cuddle’ seems so much more appropriate that I couldn’t resist using it in the title of this book. Sometimes, of course, a ‘spit’ of cats might be more fitting, or even an ‘eruption’, such as occurs every now and then on the sofa of an evening and results in much spillage of El Plonko...” A Cuddle of Cats is a charming collection of poetry that captures cats in all their moods and peculiarities – not to mention a few human quirks along the way. There is Daisy the boy, for example, who rises above an identity crisis with enviable nonchalance; Portia, who manages to snatch a blissful existence from a dodgy start in life; the Persian spy, who dominates the Kremlin during the Cold War; the veterans of the Residents’ Lounge and many, many more. Benjamin Wobble, a hero of earlier volumes, makes a welcome reappearance, as do Tiny Trixie-Tribble and Spitfire, the ageing wild cat who takes everything that is on offer with a heartwarmingly gracious grumble. Most of the rhymes and recollections are amusing; a few touch upon the sadder consequences of loving things, but the book is, above all things, a celebration of the special relationships we enjoy with these fascinating creatures. A Cuddle of Cats is a heartwarming collection that will make the perfect addition to any animal lover’s bookshelf.
