The Washington Manual® Outpatient Medicine Survival Guide covers the most common diseases and situations encountered in an outpatient clinic and includes sections on key history and physical examination findings, red flags to look for, and advice on what to tell the patient.

In recent years, papillomaviruses in general and human papillo maviruses in particular have been recognized as possible agents of important diseases, including some forms of human cancer. The purpose of this book is to present a concise panorama of the pre sent status of knowledge of this topic. This knowledge is as impor tant to molecular biologists and virologists as it is to clinicians and pathologists. To bridge the gap among these diverse groups of investigators, we conceived of a book covering a broad spectrum of the basic scientific, clinical, and pathological aspects of diseases associated with papillomaviruses. Although the principal thrust of this book is directed at human papillomaviruses, fundamental knowledge of animal viruses is essential to the current understand ing of the molecular mechanisms of cell transformation. For this reason, a chapter on animal viruses has also been included. Some of the experimental work having to do with the elucidation of transformation and other aspects of interaction between the virus

and the cell cannot be based on human papillomaviruses because of a lack of suitable experimental models. Hence, some of the chapters dealing with fundamental aspects of viral molecular biology are based on animal models. We were very fortunate in having persuaded a number of distinguished colleagues to contribute to this work. New edition includes more than 350 new illustrations and 22 revised chapters. Written by internationally recognized experts. Each entry is structured the same way, from general to more specific information, which allows the reader to quickly access key information in every chapter. Since the publication of the 1/e in 1977, Blaustein's Pathology of the Female Genital Tract has consolidated its position as the leading textbook of gynecological pathology. an essential reference for all pathologists and residents, this thoroughly updated Sixth Edition includes more than 1500 illustrations in color, i

Cervical cancer is the second most common cancer among women worldwide. This book serves as a concise teaching manual on visual inspection with acetic acid (VIA) and with Lugol's iodine to train health personnel, especially in developing countries, with the aim to detect this disease in the early pre-invasive phase and save women's lives. These two simple low-technology screening tests based on the ability of the trained health-care personnel to detect acetowhite areas, or yellow non-iodine uptake areas, in the cervical transformation zone are being evaluated as potential alternatives to cervical cytology.

It describes how treatment of the skin is often very different to other specialities, as both topical and systemic medications are used, and reviews the clinical signs, investigation and diagnostic approaches to skin diseases.

Treatment of Skin Diseases: A Practical Guide principally aids primary care physicians, trainee dermatologists and dermatology nurse practitioners, but it is also a convenient management guide for allied health professionals, students and hospital-based physicians. A concise atlas of diagnostic photographs is included and incorporated with a simple set of common differentials to provide a useful reference for primary care readers and those training in dermatology. The book also contains information on the management of common skin problems, together providing a comprehensive introduction to the treatment of skin diseases. The treatment options for secondary and tertiary care are also included to provide a thorough picture of the spectrum of dermatologic therapeutics.

Most women who die from cervical cancer, particularly in developing countries, are in the prime of their life. They may be raising children, caring for their family, and contributing to the social and economic life of their town or village. Their death is both a personal tragedy, and a sad and unnecessary loss to their family and their community. Unnecessary, because there is compelling evidence, as this Guide makes

clear, that cervical cancer is one of the most preventable and treatable forms of cancer, as long as it is detected early and managed effectively. Unfortunately, the majority of women in developing countries still do not have access to cervical cancer prevention programmes. The consequence is that, often, cervical cancer is not detected until it is too late to be cured. An urgent effort is required if this situation is to be corrected. This Guide is intended to help those responsible for providing services aimed at reducing the burden posed by cervical cancer for women, communities and health systems. It focuses on the knowledge and skills needed by health care providers, at different levels of care.

This volume reviews the evidence for a causal link between sexually transmitted infection with human papillomavirus (HPV) and the occurrence of cervical cancer, from a variety of different angles.

Epidemiological studies and clinical, pathological, and cytological aspects of HPV infection are reviewed. Modern methods for analyzing HPV-DNA types by molecular biological techniques are described, and the statistical problems to be overcome in epidemiological work are explained. The volume was prepared by a broad team of experts from around the world, who met in Copenhagen in March 1988 to reach a consensus on the present state of understanding and to establish directions for future work.

Despite the common perception that medicine is becoming specialty driven, there are many reasons for primary care providers to offer women's health procedures in an office setting. Women feel more comfortable having procedures done by providers whom they already know and trust.

Continuity of care is still valued by patients, who trust their primary care providers to work with them as collaborators in the decision-making process. Women have found that their options for care have become limited, not by their own decision, but by the lack of training of their provider. In rural areas, the barriers of time, expense, and travel often prevent many women from obtaining necessary care; yet many of the procedures that these women are requesting are relatively easy to learn. Positive experiences are shared by women who then refer friends and family by word of mouth. This book has been designed to assist not only the clinician performing the procedures covered, but also the office staff with setting up the equipment tray prior to performing the procedure and with preparing office documents and coding information needed to

complete the procedure. Most procedures covered can be done with a minimum investment in equipment and require minimal training.

The thoroughly updated Fifth Edition of this popular Spiral® Manual is a practical, reliable quick-reference guide to diagnosis and treatment of infectious diseases. Organized for rapid information retrieval, the book provides concise, organized summaries of each disease. New chapters cover new pathogens causing pneumonia—SARS, human papillomavirus diagnosis and management, treatment of VZV and post-herpetic neuralgia, parvovirus infections, West Nile virus, agents of bioterrorism, choosing a quinolone, treatment and prevention of influenza, and the role of HIV resistance testing. This publication gives a broad vision of what a comprehensive approach to cervical cancer prevention and control means. In particular, it outlines the complementary strategies for comprehensive cervical cancer prevention and control, and highlights the need for collaboration across programs, organizations and partners. This new guide updates the 2006 edition and includes the recent promising developments in technologies and strategies that can address the gaps between the needs for and availability of services for cervical cancer prevention and control. In the last few years, there has been an emergence of ground-breaking new strategies in cervical cancer prevention and control. Because such strategies require evidence-based evaluation for decision-making in clinical practice and program planning, a World Health Organization (WHO) Steering Committee and a group of invited experts met in Geneva, Switzerland, in September 2010, to ensure that the WHO's guidance on cervical cancer continues to encompass all the relevant technologies and strategies. This edition of the guide has two new chapters: Chapter 2: Essentials for cervical cancer prevention and control programs and Chapter 4: HPV

vaccination. One chapter has been newly organized: Chapter 5: Screening and treatment of cervical pre-cancer. All other chapters have been thoroughly updated and edited as needed. This guide aims to assist those responsible for providing services aimed at reducing the burden of cervical cancer on women, their communities and health systems. It focuses on the knowledge, best practices and communication skills needed by health-care providers working at community and primary and secondary levels of care to offer quality services for prevention, screening, treatment and palliative care for cervical cancer: the full continuum of care. The guide is intended primarily for health-care providers in health centers and district hospitals who deal with women's health and/or adolescent's health, but it may also be of interest to community-based and tertiary-level providers. Providers and managers at the sub-national level whose responsibilities may include program planning would be interested in Chapter 2 on program essentials, which covers implementation, monitoring and evaluating, and/or supervising and training other health-care providers. National-level decision-makers will find updated evidence-based information in this guide on what works in cervical cancer prevention and control programs, which may be of use as a basis for updating their own guidelines and protocols.
