Use the power of life force to live your highest potential. We all know what it's like to have a "charge" about something. It's a feeling of excitement, fear, sexual arousal, or irritation. But what we don't currently know is how to use charge for the behaviors we want to create. Charge is a word for the basic life force running through us. This force is crucial if we are to meet the challenges of difficult situations, heal past wounds and traumas, and manage the stress of modern life. Even more, it is essential for understanding how to master your own life force and become all you can be. This book makes an important contribution to the growing field of Energy Medicine, by looking at charge as the interface between mind and body, and the missing ingredient in Mind-Body healing. It brings the reader into a deep intimacy with their own life force, as well as an understanding of how charge runs their relationships, their children, their clients, and patients. It examines how we can become "overcharged" or "undercharged" and how to bring about balance through practices of charging and discharging. Each chapter gives simple exercises to put these principles into practice. World-renowned teacher, somatic therapist, best-selling author, and advanced yoga teacher, Anodea

Two of the most important political movements of the late twentieth century are those of environmentalism and feminism. In this book, Val Plumwood argues that feminist theory has an important opportunity to make a major contribution to the debates in political ecology and environmental philosophy. *Feminism and the Mastery of Nature* explains the relation between ecofeminism, or ecological feminism, and other feminist theories including radical green theories such as deep ecology. Val Plumwood provides a philosophically informed account of the relation of women and nature, and shows how relating male domination to the domination of nature is important and yet remains a dilemma for women.

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have

resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and

stress, coping, and health and their relevance for nursing and related health fields. Building on the first edition that has been highly-praised for its analysis and critique of existing models and its discussion of new research surrounding self-regulation and stress, this Second Edition continues to provide a critical analysis of the field while providing up to date cutting-edge research. Under the expert editorship of Dr. Virginia Hill Rice, experienced scholars and practitioners present a broad range of issues and research that relate to stress and health, such as response-oriented stress; stimulus-oriented stress; and transactional stress, coping, and health in children, adolescents, attitudes, and much, much more. “We finally have the definitive treatise on PyTorch! It covers the basics and abstractions in great detail. I hope this book becomes your extended reference document.” —Soumith Chintala, co-creator of PyTorch

behavioral therapy (CBT) and is organized by skill, with each chapter building on the one before it. You will learn the importance of record-keeping and monitoring your progress, as well as breathing techniques and thinking skills. The main focus of treatment involves learning how to face agoraphobic situations and the scary physical symptoms of panic from an entirely new perspective. Self-assessment quizzes, homework exercises, and interactive forms allow you to become an active participant in your treatment. Over time, you will learn to manage your panic attacks, anxiety about panic, and avoidance of panic and agoraphobic situations.
