This is a practical introduction to statistics as a means of revealing patterns in human behaviour. It takes the fear out of the use of statistics in social research and avoids unnecessary use of mathematical concepts and techniques.

Reproductive Technologies in Animals provides the most updated and comprehensive knowledge on the various aspects and applications of reproductive technologies in production animals as well as companion, wild, exotic, and laboratory animals and birds. The text synthesizes historical information and recent discoveries, while dealing with economical and geographical issues related to the implementation of the same technologies. It

also presents the effects of reproductive technology implementation on animal welfare and the possible threat of pathogen transmission. Reproductive Technologies in Animals is an important resource for academics, researchers, professionals in public and private animal business, and students at the undergraduate and graduate levels, as it gives a full and detailed first-hand analysis of all species subjected to the use of reproductive technologies. Provides research from a team of scientists and researchers whose expertise spans all aspects of animal reproductive technologies Addresses the use of reproductive technologies in a wide range of animal species Offers a complete description and historical background for each species described Discusses successes and failure as well as future challenges in reproductive technologies Stochastic Optimization Models in Finance focuses on the applications of stochastic optimization models in finance, with emphasis on results and methods that can and have been utilized in the analysis of real financial problems. The discussions are organized around five themes: mathematical tools; qualitative economic results; static portfolio selection models; dynamic models that are reducible to static models; and dynamic models. This volume consists of five parts and begins with an overview of expected utility theory, followed by an analysis of convexity and the Kuhn-Tucker conditions. The reader is then

introduced to dynamic programming; stochastic dominance; and measures of risk aversion. Subsequent chapters deal with separation theorems; existence and diversification of optimal portfolio policies; effects of taxes on risk taking; and two-period consumption models and portfolio revision. The book also describes models of optimal capital accumulation and portfolio selection. This monograph will be of value to mathematicians and economists as well as to those interested in economic theory and mathematical economics.

The social cost of carbon (SC-CO<sub>2</sub>) is an economic metric intended to provide a comprehensive estimate of the net damages - that is, the monetized value of the net impacts, both negative and positive - from the global climate change that results from a small (1-metric ton) increase in carbon-dioxide (CO<sub>2</sub>) emissions. Under Executive Orders regarding regulatory impact analysis and as required by a court ruling, the U.S. government has since 2008 used estimates of the SC-CO<sub>2</sub> in federal rulemakings to value the costs and benefits associated with changes in CO<sub>2</sub> emissions. In 2010, the Interagency Working Group on the Social Cost of Greenhouse Gases (IWG) developed a methodology for estimating the SC-CO<sub>2</sub> across a range of assumptions about future socioeconomic and physical earth systems. Valuing Climate Changes examines potential approaches, along with their relative merits and challenges, for a comprehensive update to the current methodology. This publication also recommends near-

and longer-term research priorities to ensure that the SC- CO2 estimates reflect the best available science.

The editor of this volume asserts that sociology's ostrich-like stance threatens to leave the discipline in a position of irrelevance to the world at large and compromises the support of policymakers, funders, media and the public.

Wilson's vision is of a sociology attuned to the public agenda, influencing public policy through both short and long-range analysis from a sociological perspective. Using a variety of policy issues, perspectives, methods and cases, the distinguished contributors to this volume both demonstrate and emphasize Wilson's ideas.

*Spatial Analysis: Modelling in a GIS Environment* Edited by Paul Longley and Michael Batty Digital data and information are used increasingly by academics, professionals, local authorities, and government departments. Powerful new technologies, such as geographic information systems (GIS), are being developed to analyse such data, and GIS technologies are rapidly becoming part of the emergent world digital infrastructure. This book shows how computer methods of analysis and modelling, built around GIS, can be used to identify ways in which our cities and regions might be better planned and understood. The contributors to this book are all actively involved in research using geographic

information systems. This book will be valuable reading for: \* Geographers, researchers, and regional analysts \* Population theorists and regional economists with interests in large-scale demographic and employment data \* Planners and policy-makers who wish to use GIS to improve their decision making \* Business analysts who wish to explore markets using the most recent advances in digital spatial data technology \* All those interested in geodemographics Paul Longley is Professor of Geography at the Department of Geography, University of Bristol, United Kingdom. Michael Batty is Professor of Spatial Analysis and Planning at the University College London, United Kingdom. This important new text provides a clear, comprehensive, and accessible overview of major economic issues facing Latin America today, including balance of payments problems, inflation, stabilization, poverty, inequality, and land reform. It captures trends and common issues and at the same time illustrates the diversity of national experiences. Each chapter centers around an economic problem from such new topics as debt to more enduring issues like poverty and agrarian reform - and presents major economic theories on the causes and solutions to the problem. Complex equations and formulas are omitted; instead, the discussion focuses on the underlying logic of contending policy prescriptions. Cardoso and Helwege provide numerous cross-country examples and tables to demonstrate how individual countries are affected differently by economic trends or policies, gradually building a sense of the complexity of the Latin American economy and the policy implications behind

economicsolutions. Chapters also include helpful summaries and ideas on what the future may hold. Both authors are at Tufts University. Eliana Cardoso is Associate Professor at the Fletcher School of Law and Diplomacy and Ann Helwege is Assistant Professor in the Department of Urban and Environmental Policy.

This book presents up-to-date recommendations for the prevention, diagnosis, and management of complications in endodontic surgical procedures, based on the best available scientific evidence. Common risks such as wound healing impairment, infection and bleeding are discussed and specific complications related to endodontic surgery, such as maxillary sinus involvement and damage to adjacent neurovascular structures, are reviewed. For each step of endodontic surgical procedures, surgical goals and possible outcomes are reviewed. Preoperative, intraoperative and postoperative risk factors for complications are identified and treatment options presented. Helpful decision-making algorithms, tables and flow charts complement the reader-friendly text.

"The objective of this report is to identify and establish a roadmap on how to do that, and lay the groundwork for transforming how this Nation- from every level of government to the private sector to individual citizens and communities - pursues a real and lasting vision of preparedness. To get there will require significant change to the status quo, to include adjustments to policy, structure, and mindset"--P. 2.

This volume offers fresh insights into economic development and growth in emerging economies. It includes contributions covering topics such as natural disasters and income inequalities, the environmental impact of economic growth, social preferences, information and market disorder under democracy, inflation targeting and its covariates, economic
