The Uniform Building Code is one of the most widely adopted model building codes in the world and is a proven document meeting the needs of government units charged with enforcement of building regulation. The most recent edition, published in 1997, provides complete regulations covering all major aspects of building design and construction relating to fire and life safety and structural safety. The provisions of the 1997 Uniform Building Code were published in three volumes to help building inspectors, plans examiners, architects and structural designers locate provisions applicable to their respective fields without the need to search through all provisions. The two most popular volumes, 1 and 2, are now available from Delmar Learning. Volume 1 contains the administrative, fire- and life-safety, and field inspection provisions, including all nonstructural provisions and those structural provisions necessary for field inspections.

The townhouse separation provisions now include options for using two separate fire-resistant-rated walls or a common wall. An emergency escape and rescue opening is no longer required in basement sleeping rooms where the dwelling has an automatic fire sprinkler system and the basement has a second means of egress or an emergency escape opening. The exemption for interconnection of smoke alarms in existing areas has been deleted. New girder/header tables have been revised to incorporate the use of #2 Southern Pine in lieu of #1 Southern Pine. New tables address alternative wood stud

heights and the required number of full height studs in high wind areas.
