Years of observation and reflection in a classroom session, allow us to continuously reinvent the wheel of teaching and learning pedagogy. This continuous introspection and reinvention orients into best practices. In the same stream, this articulation, is an outcome of immaculate observation meant for learners at the tertiary level. The scholarly approach adopted in this book aligns with the requirement of acquiring a language, especially the speaking skills. The need for effective communication skills in the new millennium has surged and has become all the more important. English

continues to be the dominant language in Science, Technology, Engineering and Management (STEM). It is therefore obvious that the growth curve of a person hinges on effective communication skills. To perform exceptionally well in interviews and group discussions, it is imperative for students to manage their communication skills effectively. This book attempts to prepare the students to excel in it as well as group discussions and give an impressive interview which will ultimately increase their credibility. Indians have always had the upper-hand in international scenario due to their exceptional English language and communication skills. However, as we see from the last decade many non-English speaking countries especially China, Korea and others are honing and improving their English skills and trying to shake India's numero uno position. Hence it has become necessary that we Indians continuously upgrade and improve our communication skills to maintain its position at global level. Therefore, this book is packed with practical tactics and tasks within a framework of ten chapters. The live situations used for discussions, give an insight into the corporate work culture and this makes the learner familiar with business vocabulary. A brief explanation of concepts followed by activities, gently transcends the conversation skills from a preliminary level of self-introduction to an advanced level of board room presentation. The additional topics on Ethical Dilemma, and Group Discussions are meant to stimulate the thought process of the students and engage them in an interactive conversation. This handbook has also been drafted to serve English teachers who can

Speaking and interacting with a partner will encourage a slow learner to overcome the hesitancy and speak freely. Imagine a learner-centered classroom bustling with students engaged in speaking activities, using gestures, facial expressions, body language and intonations without the fear of being assessed. Property: Cases, Problems, and Skills offers a modern, skills-based approach to Property Law, and includes a balance of classic and new cases, tightly-focused skills exercises (including advocacy, drafting, client interviewing/counseling, and negotiation), selected statutory excerpts, chapter review problems (with answers provided in the Appendix for student self-testing), and other pedagogical features (such as discussion problems raising novel and modern challenges, A Place to Start doctrinal overview boxes, and Reading Guide boxes). The online teacher s manual will provide answers to all questions posed in the text and suggestions for conducting the skills exercises (generally, during a group exercise that takes all or part of a single class session). The two-color text is visually appealing, with judicious use of photographs, text boxes, and pedagogical diagrams. Although the text does not take a hide the ball approach, it prods students to engage with the law s complexity, ambiguity, and nuance.

Forensic practitioners work in a diverse range of settings, with a wide variety of groups

and with a large number of agencies. Their work, whilst rewarding, is challenging, demanding and often undertaken in highly stressful situations. Ensuring that the workforce is trained and supported is essential in order to maintain skilful, knowledgeable, responsive and effective practitioners. Whilst training, self-directed learning and peer support all play a role, the need for supervision for practitioners is increasingly being recognised. This text is aimed at all those working in forensic settings who have direct contact with the perpetrators and victims of crime and is written for both those new to supervision and those with many years' experience. Specific chapters focus on knowledge and skills for the supervisor and the supervisee and on those responsible for developing supervision systems for staff groups. This includes a focus on risk, boundaries, approaches to learning and the evidence base for supervision practice. Attention is also given to developing supervision competence and combatting harmful or 'lousy' supervision. The core text is supplemented by ten Special Topics addressing single issues commonly faced in supervision practice, such as ethical issues and reflective practice. The combination of comprehensive chapters and a focus on specific issues through ten Special Topics provides those involved in supervision with an essential resource. This book is essential reading for supervisors, students, managers and researchers who are involved or interested in the supervision process.

Over a third of all consultations in general practice are now conducted by nurses. The consultation is the key element of primary care, with patients being more satisfied with the care given by clinicians who have good communication skills. Poor communication or dissatisfaction with a consultation is reported to be one reason why patients decide not to attend or do not take a prescribed treatment. Patients need to be satisfied with the consultation, understand their condition and understand the reasons for their

treatment or management plan. This book has been written to reinforce good consultation and communication skills and highlights areas where readers might wish to review and improve their own consultation techniques. This is done through case studies and scenarios that are likely to be common in many practices. Although the text and scenarios relate to practice nurse consultations, the content can be transferred to all primary care nursing settings.

In this groundbreaking guide for clinicians, psychologist Matthew McKay and Aprilia West present emotional efficacy therapy (EET)—a powerful and proven-effective model for treating clients with emotion regulation disorders. If you treat clients with emotion regulation disorders—including depression, anxiety, post-traumatic stress disorder (PTSD), bipolar disorder, and borderline personality disorder (BPD)—you know how important it is for these clients to take control of their emotions and choose their actions in accordance with their values. To help, emotion efficacy therapy (EET) provides a new, theoretically-driven, contextually-based treatment that integrates components from acceptance and commitment therapy (ACT) and dialectical behavior therapy (DBT) into an exposure-based protocol. In doing so, EET targets the transdiagnostic drivers of experiential avoidance and distress intolerance to increase emotional efficacy. This step-by-step manual will show you how to help your clients confront and accept their pain, and learn to apply new adaptive responses to emotional triggers. Using a brief treatment that lasts as little as eight weeks, you will be able to help your clients understand and develop a new relationship with their emotions, learn how to have mastery over their emotional experience, practice values-based action in the midst of being emotionally triggered, and stop intense emotions from getting in the way of creating the life they want. Using the transdiagnostic, exposure-based approach in this book, you can help your clients manage difficult emotions, curb negative reactions, and
