A conscious attempt has been meeting to help students experience science in varied and interesting ways while actively involving them in their own learning. This book provides an authoritative introduction to the rapidly growing field of chemical reaction network theory. In particular, the book presents deep and surprising theorems that relate the graphical and algebraic structure of a reaction network to qualitative properties of the intricate system of nonlinear differential equations that the network induces. Over the course of three main parts, Feinberg provides a gradual transition from a tutorial on the basics of reaction network theory, to a survey of some of its principal theorems, and, finally, to a discussion of the theory's more technical aspects. Written with great clarity, this book will be of value to mathematicians and to mathematically-inclined biologists,

Written at the undergraduate level, *Cooking as a Chemical Reaction: Culinary Science with Experiments* provides experiments geared for students in culinary arts, nutrition, dietetics, food science and technology, and gastronomy programs. It is intended for students with limited scientific background who are studying different aspects of food preparation and processing. The text uses experiments and experiences from the kitchen, and other food preparation and processing areas, rather than theory, as the basic means of explaining the scientific facts and principles behind food preparation and processing. This textbook is designed so that students can first perform certain experiments and record their observations in tables provided in the book. The book then explains the science behind their observations. By conducting experiments and using experiences from the kitchen, and other food preparation and processing areas, this textbook engages students in their own learning process. Many concepts throughout the book are marked with a symbol that indicates the concept is one that they will come across frequently not just in this text, but in the kitchen and other food

preparation and processing areas. A second symbol precedes the scientific explanation of the observation made during the experiments in the chapter. At the end of each chapter, students are presented with important points to remember, more ideas to try, and study questions to reinforce concepts that were presented in the chapter. The book is designed for each chapter to be read and studied in chronological order, as the concepts of each chapter will reoccur in subsequent chapters. With this book, students are able to make observations that they will frequently see in the kitchen and other food preparation and processing areas and learn the science behind these phenomena. Thus, they will understand how to control these phenomena, allowing them to create new food products, improve the quality and safety of their dishes, improve the culinary presentations of their food, and understand what goes wrong in the kitchen, and other food preparation and processing areas.

PREFACE This book provides an accurate and complete representation of the Advanced Placement Examination in Chemistry. Our six practice exams are based on the most recently administered Advanced Placement Chemistry Exams. Each exam is three hours in length and includes every type of question that can be expected on the actual exam. Following each exam is an answer key complete with detailed explanations designed to clarify and contextualize the material. By completing all six exams and studying the explanations which follow, you can discover your strengths and weaknesses and thereby become well prepared for the actual exam. The formulas and tables for the AP Chemistry Exam can be found at the back of this book, beginning on page 417. You will be provided these formulas and tables when you take the actual exam. You should also use this material when taking the practice tests in this book.

ABOUT THE TEST The Advanced Placement Chemistry Examination is offered each May at participating schools and multi-school centers throughout the world. The Advanced Placement Program is designed to allow high school students to pursue college-level studies while attending high school. The participating colleges, in turn, grant credit and/or advanced placement to students who do well on the examinations. The Advanced Placement Chemistry course is designed to be the equivalent of a college introductory chemistry course, often taken by chemistry majors in their first year of college. Since the test covers a broad range of topics, no student is expected to

answer all of the questions correctly. The exam is divided into two sections: 1) Multiple-choice: Composed of 75 multiple-choice questions designed to test your ability to recall and understand a broad range of chemical concepts and calculations. This section constitutes 45% of the final grade and you are allowed 90 minutes for this portion of the exam. Calculators are not permitted for this section of the exam. 2) Free-response section: Composed of several comprehensive problems and essay topics. This section constitutes 55% of the final grade and the student is allowed 90 minutes for this portion of the exam. You may choose from the questions provided. These problems and essays are designed to test your ability to think clearly and to present ideas in a logical, coherent fashion. You can bring an electronic hand-held calculator for use on the 40-minute free-response section. Essay and chemical-reaction questions comprise the last 50 minutes of the test, during which calculators are not permitted. A final note about calculators: Most hand-held models are allowed in the test center; the only notable exceptions are those with typewriter-style (QWERTY) keypads. If you are unsure if your calculator is permitted, check with your teacher or Educational Testing Service.

SCORING The multiple-choice section of the exam is scored by crediting each correct answer with one point, and deducting only partial credit (one-fourth of a point) for each incorrect answer. Omitted questions receive neither a credit nor a deduction. The essay section is scored by a group of more than 1,000 college and high school educators familiar with the AP Program. These graders evaluate the accuracy and coherence of the essays accordingly. The grades given for the essays are combined with the results of the multiple-choice section, and the total raw score is then converted to the program's five-point scale: 5 - Extremely well qualified 4 - Well qualified 3 - Qualified 2 - Possibly qualified
