"Climate change. Water contamination. Air pollution. Food shortages. These and other global issues are regularly featured in the media. However, did you know that chemistry plays a crucial role in addressing these challenges? A knowledge of chemistry is also essential to improve the quality of our lives. For instance, faster electronic devices, stronger plastics, and more effective medicines and vaccines all rely on the innovations of chemists throughout the world. With our world so dependent on chemistry, it is unfortunate that most chemistry textbooks do not provide significant details regarding real-world applications. Enter Chemistry in Context-"the book that broke the mold." Since its inception in 1993, Chemistry in Context has focused on the presentation of chemistry fundamentals within a contextual framework"--

Unforeseen events occurred in the world since the publication of the third edition of Chemistry of Hazardous Materials. They include the intentional use by terrorists of hazardous materials capable of killing or severely harming large segments of the civilized population. These traumatic incidents have caused emergency responders to address special ways of effectively reducing the impact of a terrorist act. For this reason, in this fourth edition, I introduce the hazardous materials likely to be encountered when terrorists use destructive materials. I identify these materials and the properties that cause them to be hazardous and suggest ways of effectively responding when they are encountered. I also exercise a certain degree of care when discussing them. For obvious reasons, I intentionally avoid reporting on the manners by which they can be produced. As in earlier editions of this book, I continue to emphasize the hazardous materials regulations promulgated by the Occupational Safety and Health Administration, the U.S. Department of Transportation, and the Environmental Protection Agency. In this edition, I have updated the regulations to reflect changes that have occurred since publication of the third edition. I have worked to make this fourth edition more comprehensive and easier for nonscientists to learn and understand. To do so, I crafted performance goals so students are apprised up front of what they should learn in each section. I have also listed the names of chemical substances under each formula in every equation so students can more readily comprehend the relevant chemical change. I also constructed new Solved Exercises and Review Exercises, and I expanded the glossary to include the definitions of new technical terms and phrases in use by emergency responders. During the preparation of this book, I have considered the advice of several individuals. For the combination of their comments, I am extremely grateful. Sincerest thanks are due to the following individuals who, despite their heavy responsibilities and workloads, found the time to provide careful reviews and critiques of the entire manuscript or selected chapters thereof: John M. Eversole, Chicago Fire Department (retired), Chicago, Illinois; Gerald LaFlamme, Quinsigamond Community College, Worcester, Massachusetts, and Chief, Shrewsbury Fire Department, Shrewsbury, Massachusetts; Jeffrey T. Lindsey, Estero Fire Rescue, Estero, Florida; Chris Hawley, Baltimore
