This book is an extensive & stimulating introduction to language which students & general readers alike will read for enjoyment as well as instruction. It explores questions about the nature of human language, drawing on current thinking in linguistics.

Introduction to the study of children's language difficulties, drawing widely on real-life examples.

Speech, language, and communication are key to young children's well-being and development. At a time when communication contexts and modalities are becoming increasingly complex and multifaceted, this key text considers how pedagogical approaches, environments, and interactions can be used to develop and harness the voice of the child in the early years. *Communication for the Early Years* takes a broad, ecological systems approach to communication to present theoretical approaches and principles which map a child's communication experiences in the home, the early years setting, in the local community, through play, and engagement with digital media and the enabling environment, including the outdoor environment. Topics considered include: the role played by pedagogical leadership in the development of an effective communication environment aspects of the physical environment which encourage or inhibit communication effective communication in and between settings the importance of toys and resources developments in digital communication and their impact on the child Chapters consider perspectives of the child, family, and practitioner to encourage a holistic and collaborative understanding of interaction and the role this plays in a child's development, while case studies, examples from practice and reflective questions inspire discussion, challenge thinking, and encourage the application of research in practice. An in-depth exploration of the factors which impact on the development of a child's communication skills, this will be key reading for students and practitioners in the Early Years, as well as those involved in their training and continued professional development.

"I recommend this book as an important contribution to the debate on pedagogy in special education. It is largely well written and informative and rich with ideas and opinions." Educational Review What, if anything, is 'special' about teaching children with special or exceptional learning needs? This book addresses this question, looking at pupils' special learning needs including low attainment, learning difficulties, language difficulties, emotional and behavioural problems and sensory needs. Some special needs groups (for example dyslexia) have argued strongly for the need for particular specialist approaches. In contrast, many proponents of inclusion have argued that 'good teaching is good teaching for all' and that all children benefit from similar approaches. Both positions fail to scrutinise this issue rigorously and coherently, and it is this aspect which distinguishes this book. Leading researchers in each special needs field defend and critique a conceptual analysis of teaching strategies used with particular learner groups with special educational needs. Summaries by the editors after each chapter link pedagogic strategies, knowledge and curriculum to key points from the chapter and pave the way for discussion. This book is indispensable reading for students, policy makers, researchers and professionals in the field of special educational needs and inclusion. Shortlisted for the TES / NASEN Book Awards 2005

The acquisition of language is one of the most remarkable human achievements. When language acquisition fails to occur as expected, the impact can be far-reaching, affecting all aspects of the child's life and the child's family. Thus, research into the nature, causes, and remediation of children's language disorders provides important insights into the nature of language acquisition and its underlying bases and leads to innovative clinical approaches to these disorders. This second edition of the *Handbook of Child Language Disorders* brings together a distinguished group of clinical and academic researchers who present novel perspectives on researching the nature of language disorders in children. The handbook is divided into five sections: Typology; Bases; Language Contexts; Deficits, Assessment, and Intervention; and Research Methods. Topics addressed include autism, specific language impairment, dyslexia, hearing impairment, and genetic syndromes and their deficits, along with introductions to genetics, speech production and perception, neurobiology, linguistics, cognitive science, and research methods. With its global context, this handbook also includes studies concerning children acquiring more than one language and variations within and across languages. Thoroughly revised, this edition offers state-of-the-art information in child language disorders together in a single volume for advanced undergraduate students and graduate students. It will also serve as a valuable resource for researchers and practitioners in speech-language pathology, audiology, special education, and neuropsychology, as well as for individuals interested in any aspect of language acquisition and its disorders.

Language Disabilities in Cultural and Linguistic Diversity offers a new approach to understanding the familiar dilemma of disentangling difficulties in communication for learners developing the language of schooling. The author takes a socio-cultural Vygotskian approach to reinterpret international research in language disabilities, namely specific language impairment, communication difficulties, dyslexia and deafness.

In this exhilarating and often hilarious book, David Crystal examines why we devote so much time and energy to language games, how professionals make a career of them, and how young children instinctively take to them. Crystal makes a simple argument-that since playing with language is so natural, a natural way to learn language is to play with it-while he discusses puns, crosswords, lipograms, comic alphabets, rhymes, funny voices taken from dialect and popular culture, limericks, anagrams, scat singing, and much more.

'This sharp little book pulls no punches with its opponents (real or perceived) across the ideological battleground of special education - which if nothing else makes for a refreshing read' -"Child Language Teaching and Therapy "This is a book which does not dodge the issues. It encourages the reader to reflect on special educational needs from a political/ecological perspective and in doing so informs and stimulates' - "Pastoral Care " This book is designed for teachers in ordinary and special schools and student teachers. It presents a number of perspectives on special needs, coming from a range of professionals and others, and shows that special needs is a complex and multifaceted concept which cannot easily be described. Readers are encouraged to develop their own perspectives in the light of the views presented here. The contributors consider: legal definitions of special education; the medical model; psychological assessment; individual and family therapies; speech therapy; sociological perspectives; self-advocacy and the curriculum; teachers views of special schools; and parents views. This unique book presents a problematic concept in an accessible manner, and encourages personal reflection on practice.

At the founding in 1896 of the first psychological clinic dedicated to children and adolescents, the study of the psychological treatment of young people lagged behind that of adults, and the basic psychopathology underlying mental disorders in this population was largely ignored. Since those early days, the field has evolved steadily and, in recent years, exponentially. The Oxford Handbook of Clinical Child and Adolescent Psychology is a state-of-the-science volume providing comprehensive coverage of the psychological problems and disorders of childhood. International in scope and penned by the discipline's most eminent scientists and practitioners, the handbook begins with a section on conceptual and empirical issues, followed by exceptional content on specific psychiatric disorders such as intellectual disability, externalizing and internalizing disorders, communication disorders, schizophrenia and bipolar disorder, personality disorders, and many more. The third section offers chapters on special problems in childhood and adolescence, including divorce, the incarceration of parents, suicide and non-suicidal self-injury, bullying, and medical illness. A fourth section covers delivery of clinical services in diverse settings, such as schools and prisons, and the handbook concludes with several chapters on emerging trends and future directions for the field. Conceptually rich and evidence-based, this handbook is an essential resource for students, practitioners, and researchers, providing a cutting-edge compendium of the latest theoretical and empirical developments by leaders of the discipline.

Now in its second edition, Speech and Language Therapy: the decision-making process when working with children reveals how recent research and changes in health and education services have affected the decision-making process in the assessment and management of children with speech and language problems. With individual chapters written by experts in their field, this book: Illustrates how the decisions made by practitioners may vary within different work settings Shows how these decisions may need to be adapted when working with specific client groups Explores how such decisions are part of effective evidence-based practice Offers an overview of the skills required by the developing professional Provides insight into working as a newly qualified therapist in the current job market. Rigorously underpinned with current research and revised legislation, this is an important textbook for speech and language therapy students, potential students and specialist teachers in training. Speech and Language Therapy: the decision-making process when working with children will also be relevant to newly qualified therapists, therapists returning to the profession, specialist teachers and Special Educational Needs Coordinators.

Children's language difficulties affect many areas of functioning and development. Since most children with these difficulties are expected to function in ordinary schools and nurseries it is important that parents, teachers and practitioners have a broad understanding of the issues. Language and communication problems typically fall under the umbrella terms 'language disability', 'language delay', or 'language difficulties. They can range from an occasional difficulty with certain sounds to an inability to communicate using spoken language. These problems can occur in isolation or be associated with a range of special needs such as hearing loss, visual impairment or learning disabilities. This is the first introductory text to outline the difficulties experienced by children and link these to issues surrounding multidisciplinary assessment, intervention and service provision. Children's Language and Communication Difficulties offers professionals and parents an up-to-date account of: -the developmental language problems that children experience -the provision available to meet the child's needs the long term impact of language difficulties The authors examine the problems of identification and diagnosis, and explore the range of physical and cognitive disabilities

associated with language problems. They have also looked closely at alternative forms of communication and have provided the reader with discussion and evaluation of recently developed intervention techniques.

Each chapter will summarise recent research findings and close with a bulleted summary of the main points in the chapter. Provides an explanation of the psycholinguistic approach and how to implement it, and integrate it with other approaches. Includes case studies

The aim of this book is admirable. Despite the preponderance of texts on the development and teaching of literacy, a book which is driven by psychological theory but succeeds in combining this theory with suggestions for classroom practice is long awaited" - *Child Language Teaching and Therapy* "The Teaching of Reading combines theoretical and practical aspects of literacy, and is intended to be informative and practical in its classroom application. The author shows that informed practice can only develop from a genuine understanding of the literacy process, and the book charts the way in which the young child progresses from the first glimmerings of the purpose and recognition of print, through to a state of fully developed fluent reading.

The domain of Communication Disorders has grown exponentially in the last two decades and has come to encompass much more than audiology, speech impediments and early language impairment. The realization that most developmental and learning disorders are language-based or language-related has brought insights from theoretical and empirical linguistics and its clinical applications to the forefront of Communication Disorders science. The current handbook takes an integrated psycholinguistic, neurolinguistic, and sociolinguistic perspective on Communication Disorders by targeting the interface between language and cognition as the context for understanding disrupted abilities and behaviors and providing solutions for treatment and therapy. Researchers and practitioners will be able to find in this handbook state-of-the-art information on typical and atypical development of language and communication (dis)abilities across the human lifespan from infancy to the aging brain, covering all major clinical disorders and conditions in various social and communicative contexts, such as spoken and written language and discourse, literacy issues, bilingualism, and socio-economic status.

This book constitutes a clear, comprehensive, up-to-date introduction to the basic principles of psychological and educational assessment that underlie effective clinical decisions about childhood language disorders. Rebecca McCauley describes specific commonly used tools, as well as general approaches ranging from traditional standardized norm-referenced testing to more recent ones, such as dynamic and qualitative assessment. Highlighting special considerations in testing and expected patterns of performance, she reviews the challenges presented by children with a variety of problems--specific language impairment, hearing loss, mental retardation, and autism spectrum disorders. Three extended case examples illustrate her discussion of each of these target groups. Her overarching theme is the crucial role of well-formed questions as fundamental guides to decision making, independent of approach. Each chapter features

lists of key concepts and terms, study questions, and recommended readings. Tables throughout offer succinct summaries and aids to memory. Students, their instructors, and speech-language pathologists continuing their professional education will all welcome this invaluable new resource. Distinctive features include: A comprehensive consideration of both psychometric and descriptive approaches to the characterization of children's language A detailed discussion of background issues important in the language assessment of the major groups of children with language impairment Timely information on assessment of change--a topic frequently not covered in other texts Extensive guidance on how to evaluate individual norm-referenced measures for adoption An extensive appendix listing about 50 measures used to assess language in children A test review guide that can be reproduced for use by readers.

Although most children learn language relatively quickly, as many as 10 per cent of them are slow to start speaking and are said to have developmental language disorder (DLD). Children with DLD are managed by a variety of different professionals in different countries, are offered different services for different periods of time and are given a variety of different therapeutic treatments. To date, there has been no attempt to evaluate these different practices. *Managing Children with Developmental Language Disorder: Theory and Practice Across Europe and Beyond* does just this, reporting on the findings of a survey carried out as part of the work of COST Action IS1406, a European research network. Law and colleagues analyse the results of a pan-European survey, looking at how different services are delivered in different countries, at the cultural factors underpinning such services and the theoretical frameworks used to inform practice in different countries. The book also provides a snapshot of international practices in a set of 35 country-specific "vignettes", providing a benchmark for future developments but also calling attention to the work of key practitioners and thinkers in each of the countries investigated. This book will be essential reading for practitioners working with children with language impairments, those commissioning services and policy in the field and students of speech and language therapy.

This book contains contributions from eminent clinicians and researchers in the field of language impairment, and crosses the bridge between children and adults. It reflects the developments that have taken place in Speech and Language Therapy over the past 10 years and focuses on issues in SLT that have recently come into ascendancy. These include: personal and social consequences of language disability, and how to measure these; the evidence base for speech and language therapy interventions; language processing and the interplay between language and cognition; and the degree to which impairments in one affect the other. There is a growing concern about the needs of adolescents who have language difficulties - a group who, by their age, development and experience straddle the child/adult divide. It extends the themes by looking at future implications and sets out the challenges ahead for the speech and language therapy profession.

Teaching Children to Listen in the Early Years contains a wealth of interventions to teach young children the rules of good listening and why they are important. It is perfect for Early Years practitioners and settings where poor listening is an increasing barrier to teaching and growing numbers of children find it a challenge to stay focused on a task and follow even simple instructions, especially as technology proliferates.

This affects young children's learning in all curriculum areas and their resultant distractible behaviour can make it more difficult for the rest of the class to pay attention. Specialist Speech and Language Therapists Liz Spooner and Jacqui Woodcock offer clear ideas for differentiation along with ideas to help children apply their improved skills, whilst supporting target setting and evaluation of progress. They also make suggestions for adapting the Early Years learning environment to maximise listening and they consider how listening can be encouraged by analysing language and expression when addressing children in the classroom. This practical guide not only contains photocopiable resources, a full-colour plate section, assessments and teaching suggestions with clear and digestible explanations from professionals who work directly with children on a daily basis, but it also pinpoints the behaviours that children need to learn in order to become good listeners. *Teaching Children to Listen in the Early Years* is an invaluable resource perfect for Early Years practitioners and settings.
