Every enterprise application creates data, whether it's log messages, metrics, user activity, outgoing messages, or something else. And how to move all of this data becomes nearly as important as the data itself. If you're an application architect, developer, or production engineer new to Apache Kafka, this practical guide shows you how to use this open source streaming platform to handle real-time data feeds. Engineers from Confluent and LinkedIn who are responsible for developing Kafka explain how to deploy production Kafka clusters, write reliable event-driven microservices, and build scalable stream-processing applications with this platform. Through detailed examples, you'll learn Kafka's design principles, reliability guarantees, key APIs, and architecture details, including the replication protocol, the controller, and the storage layer. Understand publish-subscribe messaging and how it fits in the big data ecosystem. Explore Kafka producers and consumers for writing and reading messages Understand Kafka patterns and use-case requirements to ensure reliable data delivery Get best practices for building data pipelines and applications with Kafka Manage Kafka in production, and learn to perform monitoring, tuning, and maintenance tasks Learn the most critical metrics among Kafka's operational measurements Explore how Kafka's stream delivery capabilities make it a perfect source for stream processing systems

Turn team members into innovators Most organizations approach innovation as if it were a sideline activity. Every so often employees are sent to "Brainstorm Island": an off-site replete with trendy lectures, creative workshops, and overenthusiastic facilitators. But once they return, it's back to business as usual. Innovation experts Paddy Miller and Thomas Wedell-Wedellsborg suggest a better approach. They recommend that leaders at all levels become "innovation architects," creating an ecosystem in which people engage in key innovation behaviors as part of their daily work. In short, this book is about getting to a state of "innovation as usual," where regular employees—in jobs like finance, marketing, sales, or operations—make innovation happen

in a way that's both systemic and sustainable. Instead of organizing brainstorming sessions, idea jams, and off-sites that rarely result in success, leaders should guide their people in what the authors call the "5 + 1 keystone behaviors" of innovation: focus, connect, tweak, select, stealthstorm, (and the + 1) persist: • Focus beats freedom: Direct people to look only for ideas that matter to the business • Insight comes from the outside: Urge people to connect to new worlds • First ideas are flawed: Challenge people to tweak and reframe their initial ideas • Most ideas are bad ideas: Guide people to select the best ideas and discard the rest • Stealthstorming rules: Help people navigate the politics of innovation • Creativity is a choice: Motivate everyone to persist in the five keystone behaviors Using examples from a wide range of companies such as Pfizer, Index Ventures, Lonza, Go Travel, Prehype, DSM, and others, Innovation as Usual lights the way toward embedding creativity in the DNA of the workplace. So cancel that off-site. Instead, read Innovation as Usual—and put innovation at the core of your business.

Bestselling author Laura Stack's FAST model mobilizes teams to be the most effective they can be, while keeping each other's best interests at heart. Using her original model, teams learn to work together Fairly, accept Accountability, apply Systems Thinking, and maximize available Technology. An interactive assessment helps you evaluate your team's current speed and rate of acceleration. By the end of this book, you'll truly understand the abilities of your team.
