This companion to Volume I presents individually authored papers covering the history, economics, and sociology of women's work and the computer revolution. Topics include the implications for equal employment opportunity in light of new technologies; a case study of the insurance industry and of women in computer-related occupations; a study of temporary, part-time, and at-home employment; and education and retraining opportunities.

In this report, RAND researchers analyze Russian views of the current international order, identify Russia's core interests, and highlight the underlying choices for U.S. policy going forward.

Jobs provide higher earnings and better benefits as countries grow, but they are also a driver of development. Poverty falls as people work their way out of hardship and as jobs empowering women lead to greater investments in children. Efficiency increases as workers get better at what they do, as more productive jobs appear, and less productive ones disappear. Societies flourish as jobs bring together people from different ethnic and social backgrounds and provide alternatives to conflict. Jobs are thus more than a byproduct of economic growth. They are transformational—they are what we earn, what we do, and even who we are. High unemployment and unmet job expectations among youth are the most immediate concerns. But in many developing countries, where farming and self-employment are prevalent and safety nets are modest are best, unemployment rates can be low. In these countries, growth is seldom jobless. Most of their poor work long hours but simply cannot make ends meet. And the violation of basic rights is not uncommon.

Therefore, the number of jobs is not all that matters: jobs with high development payoffs are needed. Confronted with these challenges, policy makers ask difficult questions. Should countries build their development strategies around growth, or should they focus on jobs? Can entrepreneurship be fostered, especially among the many microenterprises in developing countries, or are entrepreneurs born? Are greater investments in education and training a prerequisite for employability, or can skills be built through jobs? In times of major crises and structural shifts, should jobs, not just workers, be protected? And is there a risk that policies supporting job creation in one country will come at the expense of jobs in other countries? The World Development Report 2013: Jobs offers answers to these and other difficult questions by looking at jobs as drivers of development—not as derived labor demand—and by considering all types of jobs—not just formal wage employment. The Report provides a framework that cuts across sectors and shows that the best policy responses vary across countries, depending on their levels of development, endowments, demography, and institutions. Policy fundamentals matter in all cases, as they enable a vibrant private sector, the source of most jobs in the world. Labor policies can help as well, even if they are less critical than is often assumed. Development policies, from making smallholder farming viable to fostering functional cities to engaging in global markets, hold the key to success. This comprehensive volume provides teachers, researchers and education professionals with cutting edge knowledge developed in the last decades by the educational, behavioural and neurosciences, integrating cognitive, developmental and socioeconomic approaches to deal with the problems children face in learning mathematics. education have been the subject of intense research in the last few decades, but the most part of this research has been conducted in non-applied settings and there's still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings. Now it's time to bring the results from the laboratory to the classroom. Apart from bringing the theoretical discussions to educational settings, the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments. It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues. And it does so from an international perspective, dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world. All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society.

Participatory development and government accountability depend in part on the existence of media that provide broad access to information from varied sources and that equip and encourage people to raise and debate issues and develop public opinion. Conducive policies, laws, and regulations are essential for media to develop that are independent and widely accessible and that enable the expression of diverse perspectives and sources of information. Broadcasting, Voice, and Accountability presents a framework to inform analysis of existing policies and support the development of a vigorous media sector, with a particular emphasis on broadcasting. It focuses on broadcasting because that is the medium with the greatest potential to reach and involve society at large, including the most disadvantaged and illiterate segments of

society in developing countries. Information on good practices in broadcasting policy is in demand in countries of every region—particularly in countries that are opening their economies, democratizing, and decentralizing public service delivery. This book provides development practitioners with a wide overview of the key policy and regulatory issues involved in supporting freedom of information and expression and enabling development of a pluralistic, independent, and robust broadcasting sector. Policy, regulation, capacity, and institutional development are important development levers that shape the ownership, content, and social impacts of broadcasting systems. The guide shows the importance of enabling a mix of ownership and uses, commonly classified in terms of commercial, public service, and community broadcasting, that serves the public interest. With the guidance of this book, broadcasting policy and regulation can be tackled as a mainstream development topic, with important consequences for government transparency, government accountability, and enabling disadvantaged constituencies to voice their concerns and press for action. This book is the World Bank's first publication presenting good practices from around the world in media and broadcasting policy and regulation and complements existing work in governance, public sector reform, and access to information. It is a useful tool for policymakers, reform managers, development practitioners, and students alike. "Most books on the state of broadcasting in the third world tend either to lament the lack of governance, accountability and competence, or to speak down to their readers. This book is part of a new generation that acknowledges ability and a willingness to move forward into the twenty-first century with integrity and imagination. It is not patronizing, and it is certainly not boring. It focuses on really useful approaches to setting up, sustaining, and governing broadcasting systems across the world. This is an

This book is the Proceedings of a State-of-the-Art Workshop on Connections and the Behaviour, Strength and Design of Steel Structures held at Laboratoire de Mécanique et Technologie, Ecole Normale, Cachan France from 25th to 27th May 1987. It contains the papers presented at the above proceedings and is split into eight main sections covering: Local Analysis of Joints, Mathematical Models, Classification, Frame Analysis, Frame Stability and Simplified Methods, Design Requirements, Data Base Organisation, Research and Development Needs. With papers from 50 international contributors this text will provide essential reading for all those involved with steel structures.

Russia employs a sophisticated social media campaign against former Soviet states that includes news tweets, nonattributed comments on web pages, troll and bot social media accounts, and fake hashtag and Twitter campaigns. Nowhere is this threat more tangible than in Ukraine.

This book brings together new household and enterprise data from 41 countries in Sub-Saharan Africa to inform policy makers and practitioners on ways to expand women entrepreneurs' economic opportunities. Sub-Saharan Africa boasts the highest share of women entrepreneurs, but they are disproportionately concentrated among the self-employed rather than employers. Relative to men, women are pursuing lower opportunity activities, with their enterprises more likely to be smaller, informal, and in low value-added lines of business. The challenge in expanding opportunities is not

helping more women become entrepreneurs but enabling them to shift to higher return activities. A central question addressed in the book is what explains the gender sorting in the types of enterprises that women and men run? The analysis shows that many Sub-Saharan countries present a challenging environment for women. Four key areas of the agenda for expanding women's economic opportunities in Africa are analyzed: strengthening women's property rights and their ability to control assets; improving women's access to finance; building human capital in business skills and networks; and strengthening women's voices in business environment reform. These areas are important both because they have wide gender gaps and because they help explain gender differences in entrepreneurial activities. It is particularly striking that while gender gaps in education tend to close with higher incomes, gaps in women's property rights and in women's participation in reform processes do not. As simply raising a country's income is unlikely to be sufficient to give women equal ability to control assets or have greater voice, more proactive steps will be needed. Practical guidelines to move the agenda forward are discussed for each of these key areas.

In the 21st century, management of municipal solid waste (MSW) continues to be an important environmental challenge facing the U.S. Climate change is also a serious issue, & the U.S. is embarking on a number of voluntary actions to reduce the emissions of greenhouse gases (GHGs) that can intensify climate change. By presenting material-specific GHG emission factors for various waste management options, this report examines how the two issues -- MSW management & climate change -- are related. The report's findings may be used to support a variety of programs & activities, including voluntary reporting of emission reductions from waste management practices. Charts, tables & graphs.

Electrical power transmission and distribution are an important area of electrical engineering. This book on electrical power transmission and distribution takes into account the layout, design and manufacture of components that form an electrical grid. There has been rapid progress in this field and its applications are finding their way across multiple industries. Contents included in this book aim to facilitate a comprehensive knowledge in the fields of electrical engineering and efficient electricity generation and consumption. This book is a vital tool for all researching or studying electricity transmission as it gives incredible insights into emerging trends and concepts. The readers would gain knowledge that would broaden their perspective about this field.

Costa Rica was once one of the most deforested countries in the world. Today it is a pioneer in reforestation, forest management, and forest protection policies. The report describes the evolution of these policies since the 1950s, focusing on internal and external influences, particularly those of the World Bank. This case study is one of six evaluations of the implementation of the World Bank's 1991 Forest Strategy

This book comprises select papers from the International Conference on Emerging Trends in Civil Engineering (ICETCE 2018). Latest research findings in different branches of civil engineering such as structural engineering, construction materials, geotechnical engineering, water resources engineering, environmental engineering, and transportation infrastructure are covered in this book. The book also gives an overview of emerging topics like smart materials and structures, green building technologies, and intelligent transportation system. The contents of this book will be beneficial for students, academicians, industrialists and researchers working in the field of civil engineering.

#1 New York Times Bestseller \* A historian of fascism offers a guide for surviving and resisting America's turn towards authoritarianism. The Founding Fathers tried to protect us from the threat they knew, the tyranny that overcame ancient democracy. Today, our political order faces new threats, not unlike the totalitarianism of the twentieth century. We are no wiser than the Europeans who saw democracy yield to fascism, Nazism, or communism. Our one advantage is that we might learn from their experience. *On Tyranny* is a call to arms and a guide to resistance, with invaluable ideas for how we can preserve our freedoms in the uncertain years to come.
