Primary care medicine is the new frontier in medicine. Every nation in the world has recognized the necessity to deliver personal and primary care to its people. This includes first-contact care, care based in a positive and caring personal relationship, care by a single healthcare provider for the majority of the patient's problems, coordination of all care by the patient's personal provider, advocacy for the patient by the provider, the provision of preventive care and psychosocial care, as well as care for episodes of acute and chronic illness. These facets of care work most effectively when they are embedded in a coherent integrated approach. The support for primary care derives from several significant trends. First, technologically based care costs have rocketed beyond reason or availability, occurring in the face of exploding populations and

diminishing real resources in many parts of the world, even in the wealthier nations. Simultaneously, the primary care disciplines-general internal medicine and pediatrics and family medicine-have matured significantly.

The Social Security Administration (SSA) uses a screening tool called the Listing of Impairments to identify claimants who are so severely impaired that they cannot work at all and thus immediately qualify for benefits. In this report, the IOM makes several recommendations for improving SSA's capacity to determine disability benefits more quickly and efficiently using the Listings.

Pharmaceutical Ethics is an important text, which aims to provide the ethical guidelines much needed by the pharmaceutical industry. By focusing on many of the central issues such as the ethical aspects of clinical trials, informed consent, physician or patient choice and pharmaceutical advertising, this text will provide very good coverage of an area which perhaps still lacks coherent instruction. * Covers ethical issues involved in the testing and use of pharmaceuticals on human beings * Investigates issues such as whether choice of drug should lie with the physician or the patient * Looks at a wide variety of subjects connected with pharmaceutical ethics. * Focuses specifically on the issues surrounding the pharmaceutical industry, not medicine in general. * Fulfills an important need in the Pharmaceutical Industry.

The story of a renowned New York doctor, Robert T. Morris (1857-1945), who struggled with a reactionary profession to pioneer sterility, small incisions, and better wound-healing in surgery. Blessed with abundant energy, sagacity, and long life, he also achieved distinction as a naturalist, horticulturist, and explorer, celebrating nature with brilliant prose and poetry. For those days, Morris was a rare visionary,

Now in its fourth edition, this best-selling book is fully updated to address the ever increasing demands on healthcare professionals to deliver high-quality patient care. A multitude of factors impinge on healthcare delivery today, including an ageing population, more sophisticated medicines, high patient expectation and changing health service infrastructure. Time demands on primary care doctors have caused other models of service delivery to be adopted across the world, leading to ongoing changes in the traditional boundaries of care between doctors, nurses, and pharmacists. Certain medical tasks are now being performed by nurses and pharmacists, for example prescribing. Healthcare policies to encourage patients to manage their own health have led to more medicines becoming available over the counter, allowing community pharmacists to manage and treat a wide range of conditions. Further deregulation of medicines to treat acute illness from different therapeutic areas seems likely.

Government policy now encourages chronic disease management as a self-care activity, and could well be the largest area for future growth of reclassification of medicines. Pharmacists, now more than ever before, need to be able to recognise the signs and symptoms, and use an evidence-based approach to treatment. Community Pharmacy is intended for all non-medical prescribers but especially for pharmacists, from undergraduate students to experienced practitioners.
