If you've invested in a camera as sophisticated as the Canon EOS 7D II, you're looking for more than good pictures -- you demand outstanding photos. After all, the 7D II is the most advanced APS-C format camera that Canon has ever introduced. It boasts 20 megapixels of resolution, blazing-fast automatic focus, and cool features like full high-definition movie shooting. But your gateway to pixel proficiency is dragged down by the slim little book included in the box as a manual. You know everything you need to know is in there, somewhere, but you don't know where to start. In addition, the camera manual doesn't offer much information on photography or digital photography. Nor are you interested in spending hours or days studying a comprehensive book on digital SLR still photography that doesn't necessarily apply directly to your 7D II. What you need is a guide that explains the purpose and function of the 7D II's basic controls, how you should use them, and why. Ideally, there should be information about file formats, resolution, exposure, and special autofocus modes available, but you'd prefer to read about those topics only after you've had the chance to go out and take a few hundred great pictures with your new camera. Why isn't there a book that summarizes the most important information in its first two or three chapters, with lots of illustrations showing what your results will look like when you use this setting or that? Now there is such a book. The basic structure of the EOS Rebel T8i/850D camera is similar to that of its predecessor model EOS Rebel T6i. This camera has a 24 Megapixel APS-C sensor. The new generation sensor with a dual-chip can capture very good images in high-contrast conditions. Due to the presence of the Dual-Chip CMOS AF sensor, it is much faster and has a much larger coverage area. It is possible to make some good photos by using the Dual-Chip CMOS AF sensor. It helps in improved AF and AF-C performance as compared to the EOS Rebel T6i. Furthermore, the user can use this camera in low-light situations. In the photos captured in low light, it is possible to see a very bright bokeh effect. Also, it has better autofocus ability than the EOS Rebel T6i. The maximum ISO can be set up to 16000 and the range of ISO 100-32000. Its electronic shutter is faster than the EOS Rebel T6i. It has a new AF algorithm that makes it possible to track the subject with very little user effort. The camera can also shoot videos in 4K resolution at 30 frames per second. The previous model EOS Rebel T6i can shoot videos only in HD resolution. This camera features a Live View Finder, which can display what is in the viewfinder on the screen. The screen can be tilted up and down from the right side of the camera. The built-in pop-up flash can be attached to the camera to allow users to click portraits with no flash. The viewfinder and the rear LCD are always shown on the top plate and the sensitivity can be adjusted. This is the Manual you need to get started with using this camera seamlessly.
