Have you ever heard or read about a world record in education in the most adverse environment of the prison? Probably the answer would be 'No'. I must admit that I was fortunate to accomplish such an achievement in the prison and outside the prison. I am very curious to share with you and reveal to you all the aspects and secrets of my achievement that led to the world record in education in prison. 'Adversity causes some men to break, others to break records' a maxim by famous maxim writer 'William Arthur Ward' which has been proved appropriate by my achievement. Because I accomplished this achievement in the most adverse and indifferent prison environment. The goal was very tough and difficult because education and prison are very contradictory and conflicting in nature. Generally, studying in a prison environment is a very difficult task. It's like swimming in the opposite direction of the flow. Have I also revealed what kind of environment is there in prison? From the outside, only projections and guesses can be made about it. Most prisoners in prison suffer from negative factors such as anxiety, frustration, worry, fear, depression, despair, anger, feelings of retaliation, etc. Sometimes they may lose their mental stability and mental balance. Incarceration makes life difficult for prisoners inside the prison and outside the prison after their release. In such a prison's negative environment, it is very difficult to form a circle of mental peace, mental balance, and a positive attitude for noble and sacred activities like education which needs a special role of the sound mind. At the age of fifty, I began to study again in life in an adverse and negative environment of prison. Even though both my place of study (prison) and my age (50+) did not match with the activities of study, I completed 31 educational courses in this adverse environment of the prison, At the same time, performing the duty of managing study centers located inside the prison premises and set a world record in education. This book has been written with my sublime desire to share my immense pleasure and contentment with my unique, unparalleled achievement and how I accomplished it. After being released from prison, I continued my study while doing a full-time job at Dr. Babasaheb Ambedkar Open University and completed 23 more educational courses taking the tally of my educational courses to 54. I completed them with good grades and in just 12 years. Being a prisoner is destiny; but establishing a world record as a prisoner in education in prison is a testament to the ability to shape one's personality with strong morale, self-confidence, and inner strength. This book is based on my prison experience or my prison journey and in my prison experience, education was at the center. I chose the medium of this book to convey my message to my readers revealing how I accomplished this gigantic task. Hopefully, this life story will prove to be inspiring to you and will encourage you with great vigor and passion to achieve your unique, unimaginable achievements and to conquer the highest peaks in life. With best wishes. "Prison is a laboratory of turning difficulties and adversities into success." – Bhanu

This textbook for a one-semester course in Digital Systems Design describes the basic methods used to develop “traditional” Digital Systems, based on the use of logic gates and flip flops, as well as more advanced techniques that enable the design of very large circuits, based on Hardware Description Languages and Synthesis tools. It was originally designed to accompany a MOOC (Massive Open Online Course) created at the Autonomous University of Barcelona (UAB), currently available on the Coursera platform. Readers will learn what a digital system is and how it can be developed, preparing them for steps toward other technical disciplines, such as Computer Architecture, Robotics, Bionics, Avionics and others. In particular, students will learn to design digital systems of medium complexity, describe digital systems using high level hardware description languages, and understand the operation of computers at their most basic level. All concepts introduced are reinforced by plentiful illustrations, examples, exercises, and applications. For example, as an applied example of the design techniques presented, the authors demonstrate the synthesis of a simple processor, leaving the student in a position to enter the world of Computer Architecture and Embedded Systems.

"The United States Code is the official codification of the general and permanent laws of the United States of America. The Code

was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited "U.S.C. 2012 ed." As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office"--Preface.
