Numerous studies have been carried out on Byzantine coins, but there are still no univocal interpretations on the details of the figures represented there and in particular on those relating to Jesus Christ. The information derived from the studies on the Holy Shroud, the most important Relic of Christ in Christianity, has clearly resulted in some new interpretations. This is the first book in the world that deals extensively with the effigy of Christ, despite being the most sought after and collected by numismatists. Furthermore, the book relates the different images of the Redeemer on Byzantine coins with the image of Jesus Christ on the Shroud, the most important Relic of Christianity. The numerous collectors will therefore be interested in having not only a numismatic analysis of these coins but also a historical-religious study. This book, which should be understandable to everyone, demonstrates the strong influence that the Shroud had in the Byzantine era. This book includes self-test section at the end of each chapter. Test yourself, then check answers in the back of the book to see how you score. CD-ROM included.

Poland in a Colonial World Order is a study of the interwar Polish state and empire building project in a changing world of empires, nation-states, dominions, protectorates, mandates, and colonies. Drawing from a wide range of sources spanning two continents and five countries, Puchalski examines how Polish elites looked to expansion in South America and Africa as a solution to both real problems, such as industrial backwardness, and perceived issues, such as the supposed overrepresentation of Jews in "liberal professions." He charts how, in partnership with other European powers and international institutions such as the League of Nations, Polish leaders made attempts to channel emigration to South America, to establish direct trade with Africa, to expedite national minorities to far-away places, and to tap into colonial resources around the globe. Puchalski demonstrates the intersection between such national policies and larger processes taking place at the time, including the internationalist turn of colonialism and the global fascination with technocratic solutions. Carefully researched, the volume is key reading for scholars and advanced students of twentieth century European history.

Mass Shootings and Civilian Armament provides the first comprehensive multi-methodological analysis of the relationship between mass shootings and firearm purchases (as proxied by background checks) in the US on national level data from 1999-2020. Since 1994, the number of civilian-owned firearms in the US has doubled to around 398 million while the population only grew by 70 million. On average, mass shootings have occurred once every two weeks over the last decade which is a major factor behind why social scientists have started to ask whether mass shootings play a causative role in civilian decisions to purchase guns. Utilizing a multi-methodological approach featuring quantitative, comparative/configurational, and qualitative methods, this book puts forward a theoretical framework and argues that mass shootings do increase civilian armament, but that this repetitious effect is historically contingent, asymmetric, and non-linear. Particular types of mass shootings are hypothesized to have driven and continue to bring about increased levels of civilian firearm purchases through different pathways and combinations of variables – those that feature high fatality counts; arise in areas of cultural importance, are ideologically motivated. First, inquiry into background check data (1999-2020) and data on 213 mass shootings and attempted mass shootings is carried out to find out which shootings (as well as controls) are significantly correlated with background check increases. Second, the findings are utilized in a theoretically driven comparative configurational assessment to test if the noted theoretical pathways are associated with the outcome of increased post-shooting armament. Third, the empirical analyses are complimented by three case studies – the 2011 Gabrielle Giffords shooting (illustrative of the high fatality pathway), the 2012 Colorado movie theater shooting (illustrative of the cultural pathway), and the 2015 Charleston Church shooting (illustrative of the ideologically driven pathway). Interdisciplinary in nature, *Mass Shootings and Civilian Armament* will not only be of great interest to scholars of Criminology, but will also speak to sociologists, economists, public policy scholars, political scientists, historians, as well as cultural studies and American studies scholars.

Bringing together accounts of online community engagement from a range of perspectives, this book considers how the changing landscape of doctoral communities might be used to inform institutional level decisions about doctoral provision and support. Despite the increasing availability of online communities dedicated to doctoral supervisors, there has been little consideration of how they form and operate. This book surveys the landscape of these online communities and examines their impact on the production of the doctorate, and on the experience of doctoral researchers and supervisors. Bringing together accounts of online community engagement from a range of perspectives – doctoral students, supervisors, content curators, and research support practitioners, one of the overarching aims of this volume is to explore these communities in action. With the supporting doctoral research through online media catalysed as the 'new normal', this book allows stakeholders in doctoral education to better understand how students are using social media in their PhD studies, how online communities of practice impact upon researcher/supervisor relationships and support, and ways in which student experiences of various platforms might converge to create an augmented experience.

In this ground-breaking study, Paul Laird examines the process and effect of orchestration in *West Side Story* and *Gypsy*, two musicals that were among the most significant Broadway shows of the 1950s, and remain important in the modern repertory. Drawing on extensive archival research with original manuscripts, Laird provides a detailed account of the process of orchestration for these musicals, and their context in the history of Broadway orchestration. He argues that the orchestration plays a vital role in the characterization and plot development in each major musical number, opening a new avenue for analysis that deepens our understanding of the musical as an art form. The orchestration of the score in Broadway musicals deeply shapes their final soundscapes, but only recently has it begun to receive real attention. Linked by a shared orchestrator, in other ways *West Side Story* and *Gypsy* offer a study in contrasts. Breaking down how the two composers, Leonard Bernstein and Jules Styne, collaborated with orchestrators Sid Ramin, Irwin Kostal, and Robert Ginzler, Laird's study enables us to better understand both of these two iconic shows, and the importance of orchestration within musical theatre in general.

Excerpt from *Construction Accounting and Financial Management* Although accounting principles do not change, I think it is reasonable to say that their application to any particular industry, and to any specific business in that industry, usually requires

Careful analysis and sound judgment. This statement is certainly true of the construction industry. This book cannot take the place of detailed information nor of the experience with individual problems of any particular construction company. It can, however, survey the problems peculiar to the construction industry and indicate how to apply standard accounting techniques to arrive at sound solutions. With operating conditions so varied and the individual contractor's circumstances likely to be so complex, it is often necessary to go back and review basic accounting and business principles in relation to the specific conditions in a given company before management can use accounting as a true operational tool. It is for this reason that this book is devoted more to the "why" than to the "how" of construction accounting. Certainly, among the techniques described, the experienced accountant will find few, if any, that are basically unfamiliar to him, but he may see them applied in ways that may be somewhat unexpected. Taking a close look at how digital media can elevate or diminish a leader's influence, this book provides a framework to guide organizational leaders' selection and application of digital tools in communication with stakeholders. Through a media ecology approach, the book begins by exploring the transitions in technology over the course of human history that resulted in today's digital communication environment. It builds on this understanding to examine the value leadership communication provides to engage employees and drive organizational objectives internally, while also highlighting the value of leaders' external stakeholder communication using tools such as social media or websites to elevate credibility. It examines various challenges to give a realistic assessment of how leaders can navigate digital communication successfully to thrive personally and professionally. Finally, the book explores an often-missed dimension of leadership communication: followers. Using the ethicality of leadership and the role of followers, it concludes by examining guiding values for leadership communication in the digital age as well as forecasting future trends that will shape leaders' communication. The book is intended as supplementary reading in organizational, leadership, corporate, and internal communication courses at both the undergraduate and graduate levels. Proper cost accounting and financial management are essential elements of any successful construction job, and therefore make up essential skills for construction project managers and project engineers. Many textbooks on the market focus on the theoretical principles of accounting and finance required for head office staff like the chief financial officer (CFO) of a construction firm. This book's unique practical approach focuses on the activities of the construction management team, including the project manager, superintendent, project engineer, and jobsite cost engineers and cost accountants. In short, this book provides a seamless connection between cost accounting and construction project management from the construction management practitioner's perspective. Following a complete accounting cycle, from the original estimate through cost controls to financial close-out, the book makes use of one commercial construction project case study throughout. It covers key topics like financial statements, ratios, cost control, earned value, equipment depreciation, cash flow, and pay requests. But unlike other texts, this book also covers additional financial responsibilities such as cost estimates, change orders, and project close-out. Also included are more advanced accounting and financial topics such as supply chain management, activity-based accounting, lean construction techniques, taxes, and the developer's pro forma. Each chapter contains review questions and applied exercises and the book is supplemented with an eResource with instructor manual, estimates and schedules, further cases and figures from the book. This textbook is ideal for use in all cost accounting and financial management classes on both undergraduate and graduate level construction management or construction engineering programs.

Accounting for Construction follows on from Measuring Construction, edited by the same team. It extends the coverage of some of the material in the first volume and expands the range of related topics to include, inter alia, shadow economies, accounting for informal construction and the treatment of the built environment sector in national accounts. Taken together, the two volumes collate a range of topics that are only addressed, if addressed at all, in occasional academic papers and the publications of bodies such as national statistical offices and the World Bank. Accounting for Construction presents international examples from the UK, Australia and New Zealand and from both academic and professional contributors. This book is essential reading for all researchers and professionals interested in construction economics, construction management, and anyone interested in how the construction industry affects the global economy in ways previously under-represented in the literature.

The construction industry comes with many advanced accounting issues, audit procedures, and tax issues, which makes construction contractor engagements inherently higher risk than other engagements. As a result, practitioners and financial professionals should be prepared to address difficult issues such as look-back calculations, measuring progress of contracts, overhead allocations, and internal controls for construction contractors. In this book, some of the most pervasive issues in the construction industry and how to identify and manage the risks inherent in construction contractor engagements are discussed. This book shows how to: Apply complex accounting and financial reporting standards to construction contractors. Evaluate and rework audit processes to avoid common deficiencies in construction engagements. Identify tax compliance issues unique to the construction industry.

Business Model Innovation Process: Preparation, Organization and Management examines a range of critical questions that merit thoughtful interdisciplinary consideration, such as: Why do business models, and their innovation in particular, matter today? How can the process of business model innovation be understood, organized and managed adequately under increasingly volatile, uncertain, complex and ambiguous technological, business and geo-political conditions? What should decision-making and risk-management look like under these conditions, with managers whose rationality is bounded? The book offers a detailed account of

the relatively unknown process of business model innovation by looking into the intersection of strategic, operations and innovation management, organizational design, decision-making and performance management. In doing so, this book addresses fundamental issues, and introduces new ideas and theoretical perspectives. In envisioning and thinking about various potential scenarios of business model innovation and understanding how to organize for each of these under different conditions, the book provides original arguments and suggestions for practitioners. For that purpose, the book also offers many compelling real-life examples of business models and their innovation. Combining theory and practice, this book is an essential read for researchers and academics of business model innovation, as well as strategic management, digital transformation, innovation management and organizational change. It will also be of direct interest to practitioners and business leaders seeking new perspectives to increase their competitive advantage.

The new edition of this classic text covers the latest developments in American gun policy including the most recent shooting incidents that persist in plaguing the American landscape. Continuing a multi-decade trend, crime generally remains low throughout the US, but mass shootings have increased in both number and lethality, stoking greater support for gun laws among the public. Two seismic political events are highlighted in the eighth edition. The first is the ascendance of the gun safety movement, culminating in numerous electoral victories for gun law supporters in 2018 congressional and state races around the country. This outcome, which contributed to the Democrats' capture of the House of Representatives for the first time since 2008, also demonstrates that support for stronger gun laws could be a winning issue for proponents in 2020 and beyond. The second political development featured is the financial, political, and legal crises that beset the nation's oldest and most powerful gun group, the National Rifle Association. These crises are sufficiently grave that they may pose an existential threat to the organization's traditional dominance in the realm of gun politics. Author Robert J. Spitzer has long been a recognized authority on gun control and gun policy. His even-handed treatment of the issue--as both a member of the NRA and the Brady Center--continues to compel national and international interest, including appearances on major media such as the PBS NewsHour. The eighth edition of *The Politics of Gun Control* provides the reader with up-to-date data and coverage of gun ownership, gun deaths, school shootings, border patrols and new topics including universal background checks, limits on large capacity ammunition magazines, and "red flag" laws. New to the Eighth Edition Covers the ascendance of the Second Amendment sanctuary and gun safety movements, resulting from heinous shootings in Las Vegas and Parkland, Florida. Tracks the financial, political, and legal crises that threaten the dominance of the National Rifle Association. Examines new policy measures including universal background checks, limits on large capacity ammunition magazines, the bump stock controversy, and "red flag" laws, among others.

In *21st Century Airlines: Connecting the Dots*, Nawal Taneja addresses the challenges and opportunities facing the airline industry as it tries to innovate and create products and services that are radically different by 'connecting the dots' at four key levels: recognizing the implications of global events, improving cross-functional collaboration within the organization, working more closely with the travel chain, and providing much higher engagements with connectors within the social networks. The book synthesizes insights gained from the experience of non-traditional businesses, such as Uber, that have no physical assets and that focus on scalability through platforms, as well as traditional

businesses, such as Mercedes-Benz, that are transitioning from operators of physical assets to adapt to the on-demand and sharing economies. These insights show pragmatically that digitizing airline businesses would require digital mind-sets, digital technologies, digital strategies, and digital workplaces to explore new frontiers in value for both customers and airlines. Moreover, forward-thinking airlines need to consider working with bimodal organizational structures, in which one group optimizes current business models (network, fleet, and schedule planning, as well as revenue management) while a second group explores innovative ways to add digital features to physical products to provide a consistent experience throughout the journey. The book is written for all senior-level practitioners of airlines and related businesses worldwide, as well as senior-level government policymakers.

This book seeks to understand how women judges are situated as legal knowers on the High Court of Australia by asking whether a near-equal gender balance on the High Court has disrupted the Court's historically masculinist gender regime. This book examines how the High Court's gender regime operates once there is more than one woman on the bench. It explores the following questions: How have the Court's gender relations accommodated the presence women on the bench? How have the women themselves accommodated those pre-existing gender relations? How might legal judgments and reasoning change as a result of changing gender dynamics on the bench? To develop answers to these (and other) questions the book pursues a methodology that conceptualises the High Court as an institution with a particular gender regime shaped historically by the dominant gender order of the wider society. The intersection between the (gendered) individuals and the (gendered) institution in which they operate produces and reproduces that institution's gender regime. Hence, the enquiry is not so much asking 'have women judges made a difference?' but rather is asking how should we understand women judges' relationship with the law, a relationship that is shaped as much by the individual judge as by the institutional context in which they operate. Scholars, legal practitioners and researchers interested in judicial reasoning, gender diversity and the legal profession, gender and politics will be interested in this book because it breaks new ground as a case study of a Court's gender regime at a particular time.

Effective risk management is essential for the success of large projects built and operated by the Department of Energy (DOE), particularly for the one-of-a-kind projects that characterize much of its mission. To enhance DOE's risk management efforts, the department asked the NRC to prepare a summary of the most effective practices used by leading owner organizations. The study's primary objective was to provide DOE project managers with a basic understanding of both the project owner's risk management role and effective oversight of those risk management activities delegated to contractors.

Indian Diaspora World Convention was held in Trinidad in 2017 to commemorate the 1917 decision of the Indian Legislature to end further recruitment of Indians for overseas indentured service. This part is volume I of the two volume work Global Indian Diaspora. It is a significant addition to current research on India's cultural expansion into the Atlantic and Pacific worlds. In this volume, the former indentured Empire speaks back, giving its side of the narrative, not in an apologetic accounting but rather on the positive side in diverse ways. The Girmitiyas (lit. agreement signers) maintained their core values using these to gain anchorage in the new places. At the same time, they prudently took advantage of agencies, such as the Canadian Mission to gain admission to the wider westernized community. They maintained ties with India through frequent visits of Indian scholars and missionaries. They equally preserved their cultural observances derived from Indian antiquity adding diversity to the colonial society. All of these elements combine to give a refreshing perspective on the globalization of the world, which started long before all the time. Please note: Taylor & Francis does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka.
