"This book looks to cover the differences the new professional will encounter as he takes on his new position overseas". The book not only covers the basic technical translations of the items likely to be encountered during your work, but also covers what I would call the "unspoken word" These are cultural differences, such as technical phrases, modern work concepts terminology, standard practices. The book takes the student through all stages of construction and explains in detail the principal phases that the student is expected to understand & know in the new Hi tech and fast changing environment. It will be a good reference book which will enable the student to rapidly adapt to their new environment by helping them understand the basic principles, working practices, descriptions etc which some countries will take for granted. In light of this consultation paper, the Committee's report examines the issue of economic migration to the EU and the level at which it should be regulated, and discusses whether Member States should retain the freedom to decide on issues of economic migration independently of each other. The report is mostly concerned with migration into the EU, but also looks at some aspects of intra-EU movement; it does not consider illegal immigration or asylum issues. Issues discussed include: wider economic issues, the impact of globalisation, EU enlargement, options for control of migrant workers, the UK's position on the Commission's Green Paper, the case for a common EU policy, and the rights of migrant workers.
